1 RPKI Engine Reference Manual

This collection of Python modules implements a prototype of the RPKI Engine. This is a work in progress.

See <http://viewvc.hactrn.net/subvert-rpki.hactrn.net/> for code, design documents, a text mirror of portions of APNIC's Wiki, etc.

The RPKI Engine is an implementation of the production-side tools for generating certificates, CRLs, and ROAs. The [relying party tools](#) are a separate (and much simpler) package.

The Subversion repository for the entire project is available for (read-only) anonymous access at <http://subvert-rpki.hactrn.net/>.

The documentation you're reading is generated automatically by Doxygen from comments and documentation in [the code](#).

Besides the automatically-generated code documentation, this manual also includes documentation of the overall package:

- The [installation instructions](#)
- The [operation instructions](#)
- A description of the [left-right protocol](#)
- A description of the [publication protocol](#)
- A description of the [BPKI model](#) used to secure the up-down, left-right, and publication protocols
- A description of the several [SQL database schemas](#)
- Some suggestions for [further reading](#)

This work was funded from 2006 through 2008 by [ARIN](#), in collaboration with the other Regional Internet Registries. Current work is funded by DHS.

2 Further Reading

If you're interested in this package you might also be interested in:

- [The rcynic validation tool](#)
- [A live sample of rcynic's summary output](#)
- [APNIC's Wiki](#)
- [APNIC's project Trac instance](#)

3 Installation Guide

Preliminary installation instructions for [rpkid](#) et al.

These are the production-side RPKI tools, for Internet Registries (RIRs, LIRs, etc). See the "rcynic" program for relying party tools.

[rpkid](#) is a set of Python modules supporting generation and maintenance of resource certificates. Most of the code is in the `rpkid/rpki/` directory. [rpkid](#) itself is a relatively small program that calls the library modules. There are several other programs that make use of the same libraries, as well as a collection of test programs.

At present the package is intended to be run out of its build directory. Setting up proper installation in a system area using the Python distutils package would likely not be very hard but has not yet been done.

Note that initial development of this code has been on FreeBSD, so installation will probably be easiest on FreeBSD.

Before attempting to build the package, you need to install any missing prerequisites. Note that the Python code requires Python version 2.5. [rpkid](#) et al are mostly self-contained, but do require a small number of external packages to run.

- <http://codespeak.net/lxml/>. lxml in turn requires the Gnome LibXML2 C libraries.
 - FreeBSD: /usr/ports/devel/py-lxml
 - Fedora: python-lxml.i386
- <http://sourceforge.net/projects/mysql-python/>. MySQLdb in turn requires MySQL client and server. [rpkid](#) et al have been tested with MySQL 5.0 and 5.1.
 - FreeBSD: /usr/ports/databases/py-MySQLdb
 - Fedora: MySQL-python.i386

[rpkid](#) et al also make heavy use of a modified copy of the Python OpenSSL Wrappers (POW) package, but this copy has enough modifications and additions that it's included in the subversion tree.

The next step is to build the OpenSSL and POW binaries. At present the OpenSSL code is just a copy of the stock OpenSSL 0.9.8g release, compiled with special options to enable RFC 3779 support that ISC wrote under previous contract to ARIN. The POW (Python OpenSSL Wrapper) library is an extended copy of the stock POW release.

To build these, cd to the top-level directory in the distribution and type "make".

```
$ cd $top
$ make
```

This should automatically build everything, in the right order, including statically linking the POW extension module with the OpenSSL library to provide RFC 3779 support.

You will also need a MySQL installation. This code was developed using MySQL 5.1 and has been tested with MySQL 5.0 and 5.1.

The architecture is intended to support hardware signing modules (HSMs), but the code to support them has not been written.

At this point, you should have all the necessary software installed. You will probably want to test it. All tests should be run from the `rpkid/` directory. The test suite requires a few more external packages, only one of which is Python code.

- <http://pyyaml.org/>. testpoke.py (an up-down protocol command line test client) and testbed.py (a test harness) use PyYAML.
 - FreeBSD: /usr/ports/devel/py-yaml
- <http://xmlsoft.org/XSLT/>. Some of the test code uses xsltproc, from the Gnome LibXSLT package.
 - FreeBSD: /usr/ports/textproc/libxslt
- <http://w3m.sourceforge.net/>. testbed.py uses w3m to display the summary output from rcynic. Nothing terrible will happen if w3m isn't available, testbed.py will just complain about it being missing and won't display rcynic's output.
 - FreeBSD: /usr/ports/www/w3m

Some of the tests require MySQL databases to store their data. To set up all the databases that the tests will need, run the SQL commands in rpki/testbed.sql. The MySQL command line client is usually the easiest way to do this, eg:

```
$ cd $top/rpkid
$ mysql -u root -p <testbed.sql
```

To run the tests, run "make all-tests":

```
$ cd $top/rpkid
$ make all-tests
```

If nothing explodes, your installation is probably ok. Any Python backtraces in the output indicate a problem.

There's a last set of tools that only developers should need, as they're only used when modifying schemas or regenerating the documentation. These tools are listed here for completeness.

- <http://www.doxygen.org/>. Doxygen in turn pulls in several other tools, notably Graphviz, pdfLaTeX, and Ghostscript.
 - FreeBSD: /usr/ports/devel/doxygen
- <http://lynx.isc.org/current/>. The documentation build process uses xsltproc and Lynx to dump flat text versions of a few critical documentation pages.
 - FreeBSD: /usr/ports/www/lynx

- <http://www.thaiopensource.com/relaxng/trang.html>. Trang is used to convert RelaxNG schemas from the human-readable "compact" form to the XML form that LibXML2 understands. Trang in turn requires Java.
 - FreeBSD: /usr/ports/textproc/trang
- <http://search.cpan.org/dist/SQL-Translator/>. SQL-Translator, also known as "SQL Fairy", includes code to parse an SQL schema and dump a description of it as Graphviz input. SQL Fairy in turn requires Perl.

4 Operation Guide

Preliminary operation instructions for [rpkid](#) et al.

These are the production-side RPKI tools, for Internet Registries (RIRs, LIRs, etc). See rcynic/README for relying party tools.

Warning:

[rpkid](#) is still in development, and the code changes more often than the hand-maintained portions of this documentation. The following text was reasonably accurate at the time it was written but may be obsolete by the time you read it.

At present the package is intended to be run out of the `rpkid/` directory.

In addition to the library routines in the `rpkid/rpki/` directory, the package includes the following programs:

- [rpkid.py](#): The main RPKI engine daemon.
- [pubd.py](#): The [publication](#) engine daemon.
- [rootd.py](#): A separate daemon for handling the root of an RPKI certificate tree. This is essentially a stripped down version of [rpkid](#) with no SQL database, no left-right protocol implementation, and only the parent side of the up-down protocol. It's separate because the root is a special case in several ways and it was simpler to keep the special cases out of the main daemon.
- [irdbd.py](#): A sample implementation of an IR database daemon. [rpkid](#) calls into this to perform lookups via the left-right protocol.
- [irbe_cli.py](#): A command-line client for the left-right control protocol.
- [cross_certify.py](#): A BPKI cross-certification tool.

- `irbe-setup.py`: An example of a script to set up the mappings between the IRDB and rpkid's own database, using the left-right control protocol.
- `cronjob.py`: A trivial HTTP client used to drive [rpkid](#) cron events.
- `testbed.py`: A test tool for running a collection of [rpkid](#) and `irdb` instances under common control, driven by a unified test script.
- `testpoke.py`: A simple client for the up-down protocol, mostly compatible with APNIC's `rpki_poke.pl` tool.

Most of these programs take configuration files in a common format similar to that used by the OpenSSL command line tool. The test programs also take input in YAML format to drive the tests. Runs of the `testbed.py` test tool will generate a fairly complete set configuration files which may be useful as examples.

Basic operation consists of creating the appropriate MySQL databases, starting [rpkid](#), [pubd](#), [rootd](#), and [irdbd](#), using the left-right control protocol to set up rpkid's internal state, and setting up a cron job to invoke rpkid's cron action at regular intervals. All other operations should occur either as a result of cron events or as a result of incoming left-right and up-down protocol requests.

Note that the full event-driven model for [rpkid](#) hasn't yet been implemented. The design is intended to allow an arbitrary number of hosted RPKI engines to run in a single [rpkid](#) instance, but without the event-driven tasking model one must set up a separate [rpkid](#) instance for each hosted RPKI engine.

At present the daemon programs all run in foreground, that is, if one wants them to run in background one must do so manually, eg, using Bourne shell syntax:

```
$ python whatever.py &  
$ echo >whatever.pid "$!"
```

All of the daemons use syslog. At present they all set `LOG_PERROR`, so all logging also goes to `stderr`.

4.1 rpkid.py

[rpkid](#) is the main RPKI engine daemon. Configuration of [rpkid](#) is a two step process: a config file to bootstrap [rpkid](#) to the point where it can speak using the [left-right protocol](#), followed by dynamic configuration via the left-right protocol. In production use the latter stage would be handled by the IRBE stub; for test and development purposes it's handled by the `irbe_cli.py` command line interface or by the `testbed.py` test framework.

[rpkid](#) stores dynamic data in an SQL database, which must have been created for it, as explained in the [installation guide](#).

The default config file is `rpkid.conf`, start `rpkid` with "`-c filename`" to choose a different config file. All options are in the section "`[rpkid]`". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- `startup-message`: String to log on startup, useful when debugging a collection of `rpkid` instances at once.
- `sql-username`: Username to hand to MySQL when connecting to `rpkid`'s database.
- `sql-database`: MySQL's database name for `rpkid`'s database.
- `sql-password`: Password to hand to MySQL when connecting to `rpkid`'s database.
- `bpki-ta`: Name of file containing BPKI trust anchor. All BPKI certificate verification within `rpkid` traces back to this trust anchor.
- `rpkid-cert`: Name of file containing `rpkid`'s own BPKI EE certificate.
- `rpkid-key`: Name of file containing RSA key corresponding to `rpkid-cert`.
- `irbe-cert`: Name of file containing BPKI certificate used by IRBE when talking to `rpkid`.
- `irdb-cert`: Name of file containing BPKI certificate used by `irdbd`.
- `irdb-url`: Service URL for `irdbd`. Must be a `https://` URL.
- `server-host`: Hostname or IP address on which to listen for HTTPS connections. Current default is `INADDR_ANY` (IPv4 0.0.0.0); this will need to be hacked to support IPv6 for production.
- `server-port`: TCP port on which to listen for HTTPS connections.

4.2 pubd.py

`pubd` is the `publication` daemon. It implements the server side of the `publication` protocol, and is used by `rpkid` to publish the certificates and other objects that `rpkid` generates.

`pubd` is separate from `rpkid` for two reasons:

- The hosting model allows entities which choose to run their own copies of `rpkid` to publish their output under a common `publication` point. In general, encouraging shared `publication` services where practical is a good thing for relying parties, as it will speed up rcynic synchronization time.
- The `publication` server has to run on (or at least close to) the `publication` point itself, which in turn must be on a publically reachable server to be useful. `rpkid`, on the other hand, need only be reachable by the IRBE and its children in the RPKI tree. `rpkid` is a much more complex piece of software than `pubd`, so in some situations it might make sense to wrap tighter firewall constraints around `rpkid` than would be practical if `rpkid` and `pubd` were a single program.

`pubd` stores dynamic data in an SQL database, which must have been created for it, as explained in the installation guide. `pubd` also stores the published objects themselves as disk files in a configurable location which should correspond to an appropriate module definition in `rsync.conf`.

The default config file is `pubd.conf`, start `pubd` with "`-c filename`" to choose a different config file. All options are in the section "[`pubd`]". Certificates, keys, and trust anchors may be either DER or PEM format.

Config file options:

- `sql-username`: Username to hand to MySQL when connecting to `pubd`'s database.
- `sql-database`: MySQL's database name for `pubd`'s database.
- `sql-password`: Password to hand to MySQL when connecting to `pubd`'s database.
- `bpki-ta`: Name of file containing master BPKI trust anchor for `pubd`. All BPKI validation in `pubd` traces back to this trust anchor.
- `irbe-cert`: Name of file containing BPKI certificate used by IRBE when talking to `pubd`.
- `pubd-cert`: Name of file containing BPKI certificate used by `pubd`.
- `pubd-key`: Name of file containing RSA key corresponding to `pubd-cert`.
- `server-host`: Hostname or IP address on which to listen for HTTPS connections. Current default is `INADDR_ANY` (IPv4 0.0.0.0); this will need to be hacked to support IPv6 for production.

- `server-port`: TCP port on which to listen for HTTPS connections.
- `publication-base`: Path to base of filesystem tree where `pubd` should store publishable objects. Default is "publication/".

4.3 rootd.py

`rootd` is a stripped down implementation of (only) the server side of the up-down protocol. It's a separate program because the root certificate of an RPKI certificate tree requires special handling and may also require a special handling policy. `rootd` is a simple implementation intended for test use, it's not suitable for use in a production system. All configuration comes via the config file.

The default config file is `rootd.conf`, start `rootd` with "`-c filename`" to choose a different config file. All options are in the section "[rootd]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- `bpki-ta`: Name of file containing BPKI trust anchor. All BPKI certificate validation in `rootd` traces back to this trust anchor.
- `rootd-bpki-cert`: Name of file containing rootd's own BPKI certificate.
- `rootd-bpki-key`: Name of file containing RSA key corresponding to `rootd-bpki-cert`.
- `rootd-bpki-crl`: Name of file containing BPKI CRL that would cover `rootd-bpki-cert` had it been revoked.
- `child-bpki-cert`: Name of file containing BPKI certificate for rootd's one and only child (RPKI engine to which `rootd` issues an RPKI certificate).
- `server-host`: Hostname or IP address on which to listen for HTTPS connections. Default is localhost.
- `server-port`: TCP port on which to listen for HTTPS connections.
- `rpki-root-key`: Name of file containing RSA key to use in signing resource certificates.
- `rpki-root-cert`: Name of file containing self-signed root resource certificate corresponding to `rpki-root-key`.

- `rpki-root-dir`: Name of directory where `rootd` should write RPKI subject certificate, `manifest`, and CRL.
- `rpki-subject-cert`: Name of file that `rootd` should use to save the one and only certificate it issues. Default is "Subroot.cer".
- `rpki-root-crl`: Name of file to which `rootd` should save its RPKI CRL. Default is "Root.crl".
- `rpki-root-manifest`: Name of file to which `rootd` should save its RPKI `manifest`. Default is "Root.mnf".
- `rpki-subject-pkcs10`: Name of file that `rootd` should use when saving a copy of the received PKCS #10 request for a resource certificate. This is only used for debugging. Default is not to save the PKCS #10 request.

4.4 irdbd.py

`irdbd` is a sample implementation of the server side of the IRDB callback subset of the left-right protocol. In production use this service is a function of the IRBE stub; `irdbd` may be suitable for production use in simple cases, but an IR with a complex IRDB may need to extend or rewrite `irdbd`.

`irdbd` requires a pre-populated database to represent the IR's customers. `irdbd` expects this database to use the SQL schema defined in `rpkid/irdbd.sql`. Once this database has been populated, the IRBE stub needs to create the appropriate objects in `rpkid`'s database via the control subset of the left-right protocol, and store the linkage IDs (foreign keys into `rpkid`'s database, basically) in the IRDB. The `irbe-setup.py` program shows an example of how to do this.

`irdbd`'s default config file is `irdbd.conf`, start `irdbd` with "`-c filename`" to choose a different config file. All options are in the section "[`irdbd`]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- `startup-message`: String to log on startup, useful when debugging a collection of `irdbd` instances at once.
- `sql-username`: Username to hand to MySQL when connecting to `irdbd`'s database.
- `sql-database`: MySQL's database name for `irdbd`'s database.
- `sql-password`: Password to hand to MySQL when connecting to `irdbd`'s database.

- `bpki-ta`: Name of file containing BPKI trust anchor. All BPKI certificate validation in `irdbd` traces back to this trust anchor.
- `irdbd-cert`: Name of file containing `irdbd`'s own BPKI certificate.
- `irdbd-key`: Name of file containing RSA key corresponding to `irdbd-cert`.
- `rpki-cert`: Name of file containing certificate used the one and only by `rpki` instance authorized to contact this `irdbd` instance.
- `https-url`: Service URL for `irdbd`. Must be a `https://` URL.

4.5 irbe_cli.py

`irbe_cli` is a simple command line client for the control subsets of the `left-right` and `publication` protocols. In production use this functionality would be part of the IRBE stub.

Basic configuration of `irbe_cli` is handled via a config file. The specific action or actions to be performed are specified on the command line, and map closely to the protocols themselves.

At present the user is assumed to be able to read the (XML) `left-right` and `publication` protocol messages, and with one exception, `irdbd-cli` makes no attempt to interpret the responses other than to check for signature and syntax errors. The one exception is that, if the `-pem_out` option is specified on the command line, any PKCS #10 requests received from `rpki` will be written in PEM format to that file; this makes it easier to hand these requests off to the business PKI (BPKI in order to issue signing certs corresponding to newly generated business keys.

```
Command line IR back-end control program for rpki and pubd.

Usage:

```
# Top-level options:
--config= --help --pem_out= --verbose

# left-right protocol:
parent --action= --tag= --self_id= --parent_id= --bsc_id=
  --repository_id= --peer_contact_uri= --sia_base= --sender_name=
  --recipient_name= --bpki_cms_cert= --bpki_cms_glue=
  --bpki_https_cert= --bpki_https_glue= --rekey --reissue --revoke
repository --action= --tag= --self_id= --repository_id= --bsc_id=
  --peer_contact_uri= --bpki_cms_cert= --bpki_cms_glue=
  --bpki_https_cert= --bpki_https_glue=
self --action= --tag= --self_id= --crl_interval= --regen_margin=
  --bpki_cert= --bpki_glue= --rekey --reissue --revoke --run_now
  --publish_world_now
child --action= --tag= --self_id= --child_id= --bsc_id= --bpki_cert=
  --bpki_glue= --reissue
route_origin --action= --tag= --self_id= --route_origin_id=
  --as_number= --ipv4= --ipv6= --suppress_publication
bsc --action= --tag= --self_id= --bsc_id= --key_type= --hash_alg=
  --key_length= --signing_cert= --signing_cert_crl=
  --generate_keypair

# publication protocol:
certificate --action= --tag= --client_id= --uri=
roa --action= --tag= --client_id= --uri=
manifest --action= --tag= --client_id= --uri=
client --action= --tag= --client_id= --base_uri= --bpki_cert=
  --bpki_glue=
config --action= --tag= --bpki_crl=
crl --action= --tag= --client_id= --uri=
```

Global options (`-config`, `-help`, `-pem_out`) come first, then zero or more commands (`parent`, `repository`, `self`, `child`, `route_origin`, `bsc`, `config`, `client`), each followed by its own set of options. The commands map to elements in the protocols, and the command-specific options map to attributes or subelements for those commands.

`-tag` is an optional arbitrary tag (think IMAP) to simplify matching up replies with batched queries.

`-*_id` options refer to the primary keys of previously created objects.

The remaining options are specific to the particular commands, and follow directly from the protocol specifications.

A trailing "=" in the above option summary indicates that an option takes a value, eg, "-action create" or "-action=create". Options without a trailing "=" correspond to boolean control attributes.

The default config file for `irbe_cli` is `irbe_cli.conf`, start `irbe_cli` with "-c filename" (or "-config filename") to choose a different config file. All options are in the section "[irbe_cli]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- `rpkid-bpki-ta`: Name of file containing BPKI trust anchor to use when authenticating messages from `rpkid`.
- `rpkid-irbe-cert`: Name of file containing BPKI certificate `irbe_cli` should use when talking to `rpkid`.
- `rpkid-irbe-key`: Name of file containing RSA key corresponding to `rpkid-irbe-cert`.
- `rpkid-cert`: Name of file containing `rpkid`'s BPKI certificate.
- `rpkid-url`: Service URL for `rpkid`. Must be a https:// URL.
- `pubd-bpki-ta`: Name of file containing BPKI trust anchor to use when authenticating messages from `pubd`.
- `pubd-irbe-cert`: Name of file containing BPKI certificate `irbe_cli` should use when talking to `pubd`.
- `pubd-irbe-key`: Name of file containing RSA key corresponding to `pubd-irbe-cert`.
- `pubd-cert`: Name of file containing `pubd`'s BPKI certificate.
- `pubd-url`: Service URL for `pubd`. Must be a https:// URL.

4.6 cross_certify.py

`cross_certify.py` is a small tool to extract certain fields from an existing X.509 certificate and generate a new certificate that can be used as part of a cross-certification chain. `cross_certify` doesn't take a `config` file, all of its arguments are specified on the command line.

```
python cross_certify.py { -i | --in      } input_cert
                        { -c | --ca      } issuing_cert
                        { -k | --key     } issuing_cert_key
                        { -s | --serial  } serial_filename
                        [ { -h | --help  } ]
                        [ { -o | --out   } filename ]
                        [ { -l | --lifetime } timedelta ]
```

4.7 irbe-setup.py config file

Warning:

irbe-setup is old code, not currently used, kept in case it is useful at some later date. It may not work properly or at all. If you don't understand what it does, you don't need it. You have been warned.

The default config file is irbe.conf, start [rpkid](#) with "-c filename" to choose a different config file. Most options are in the section "[irbe_cli]", but a few are in the section "[irbdb]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Options in the "[irbe_cli]" section:

- `bpki-ta`: Name of file containing BPKI trust anchor.
- `irbe-cert`: Name of file containing BPKI certificate irbe-setup should use.
- `irbe-key`: Name of file containing RSA key corresponding to irbe-cert.
- `rpkid-cert`: Name of file containing rpki's BPKI certificate.
- `https-url`: Service URL for [rpkid](#). Must be a https:// URL.

Options in the "[irbdb]" section:

- `sql-username`: Username to hand to MySQL when connecting to irbdb's database.
- `sql-database`: MySQL's database name for irbdb's database.
- `sql-password`: Password to hand to MySQL when connecting to irbdb's database.

4.8 cronjob.py

This is a trivial program to trigger a cron run within `rpkid`. Once `rpkid` has been converted to the planned event-driven model, this function will be handled internally, but for now it has to be triggered by an external program. For pseudo-production use one would run this program under the system cron daemon. For scripted testing it happens to be useful to be able to control when cron cycles occur, so at the current stage of code development use of an external trigger is a useful feature.

The default config file is `cronjob.conf`, start `cronjob` with `"-c filename"` to choose a different config file. All options are in the section `"[cronjob]"`. Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- `bpki-ta`: Name of file containing BPKI trust anchor.
- `irbe-cert`: Name of file containing `cronjob.py`'s BPKI certificate.
- `https-key`: Name of file containing RSA key corresponding to `irbe-cert`.
- `rpkid-cert`: Name of file containing `rpkid`'s BPKI certificate.
- `https-url`: Service URL for `rpkid`. Must be a `https://` URL.

4.9 testbed.py:

`testbed` is a test harness to set up and run a collection of `rpkid` and `irbdb` instances under scripted control. `testbed` is a very recent addition to the toolset and is still evolving rapidly.

Unlike the programs described above, `testbed` takes two configuration files in different languages. The first configuration file uses the same syntax as the above configuration files but is completely optional. The second configuration file is the test script, which is encoded using the YAML serialization language (see <http://www.yaml.org/> for more information on YAML). The YAML script is not optional, as it describes the test layout. `testbed` is designed to support running a fairly wide set of test configurations as canned scripts without writing any new control code. The intent is to make it possible to write meaningful regression tests.

All of the options in the first (optional) configuration file are just overrides for wired-in default values. In most cases the defaults will suffice, and the set of options is still in flux, so only a few of the options are described here. The default name for this configuration file is `testbed.conf`, run `testbed` with `"-c filename"` to change it.

`testbed.conf` options:

- `testbed_dir`: Working directory into which testbed should write the (many) files it generates. Default is "testbed.dir".
- `irdb_db_pass`: MySQL password for the "irdb" user. Default is "fnord". You may want to override this.
- `rpki_db_pass`: MySQL password for the "rpki" user. Default is "fnord". You may want to override this.
- `rootd_sia`: rsync URI naming a (perhaps fictitious) directory to use as the id-ad-caRepository SIA value in the generated root resource certificate. Default is "rsync://wombat.invalid/". You may want to override this if you intend to run an rsync server and test against the generated results using rcynic. This default will likely change if and when testbed learns how to run rcynic itself as part of the test suite.

The second configuration file is named testbed.yaml by default, run testbed with "-y filename" to change it. The YAML file contains multiple YAML "documents". The first document describes the initial test layout and resource allocations, subsequent documents describe modifications to the initial allocations and other parameters. Resources listed in the initial layout are aggregated automatically, so that a node in the resource hierarchy automatically receives the resources it needs to issue whatever its children are listed as holding. Actions in the subsequent documents are modifications to the current resource set, modifications to validity dates or other non-resource parameters, or special commands like "sleep". The details are still evolving, but here's an example of current usage:

```
name:          RIR
valid_for:     2d
sia_base:      "rsync://wombat.invalid/"
kids:
  - name: LIRO
    kids:
      - name: Alice
        ipv4: 192.0.2.1-192.0.2.33
        asn: 64533
    ---
  - name: Alice
    valid_add: 10
    ---
  - name: Alice
    add_as: 33
    valid_add: 2d
    ---
  - name: Alice
    valid_sub: 2d
    ---
  - name: Alice
    valid_for: 10d
```

This specifies an initial layout consisting of an RPKI engine named "RIR", with one child "LIR0", which in turn has one child "Alice". Alice has a set of assigned resources, and all resources in the system are initially set to be valid for two days from the time at which the test is started. The first subsequent document adds ten seconds to the validity interval for Alice's resources and makes no other modifications. The second subsequent document grants Alice additional resources and adds another two days to the validity interval for Alice's resources. The next document subtracts two days from the validity interval for Alice's resources. The final document sets the validity interval for Alice's resources to ten days.

Operators in subsequent (update) documents:

- `add_as`, `add_v4`, `add_v6`: These add ASN, IPv4, or IPv6 resources, respectively.
- `sub_as`, `sub_v4`, `sub_v6`: These subtract resources.
- `valid_until`: Set an absolute expiration date.
- `valid_for`: Set a relative expiration date.
- `valid_add`, `valid_sub`: Add to or subtract from validity interval.
- `sleep [interval]`: Sleep for specified interval, or until testbed receives a SIGALRM signal.

Absolute timestamps should be in the form shown (UTC timestamp format as used in XML).

Intervals (`valid_add`, `valid_sub`, `valid_for`, `sleep`) are either integers, in which case they're interpreted as seconds, or are a string of the form "wD xH yM zS" where w, x, y, and z are integers and D, H, M, and S indicate days, hours, minutes, and seconds. In the latter case all of the fields are optional, but at least one must be specified. For example, "3D4H" means "three days plus four hours".

4.10 testpoke.py

This is a command-line client for the up-down protocol. Unlike all of the above programs, testpoke does not accept a config file in OpenSSL-compatible format at all. Instead, it is configured exclusively by a YAML script. testpoke's design was constrained by a desire to have it be compatible with APNIC's `rpki_poke.pl` tool, so that the two tools could use a common configuration language to simplify scripted testing. There are minor variations due to slightly different feature sets, but YAML files intended for one program will usually work with the other.

README for APNIC's tool describing the input language can be found at http://mirin.apnic.net/svn/rpki_engine/branches/gary-poker/client/poke/README.

testpoke.py takes a simplified command line and uses only one YAML input file.

```
Usage: python testpoke.py [ { -y | --yaml }      configfile ]
                        [ { -r | --request } requestname ]
                        [ { -h | --help } ]
```

Default configuration file is testpoke.yaml, override with `-yaml` option.

The `-request` option specifies the specific command within the YAML file to execute.

Sample configuration file:

```
---
# Sample YAML configuration file for testpoke.py

version: 1
posturl: https://localhost:4433/up-down/1
recipient-id: wombat
sender-id: "1"

cms-cert-file: biz-certs/Frank-EE.cer
cms-key-file: biz-certs/Frank-EE.key
cms-ca-cert-file: biz-certs/Bob-Root.cer
cms-cert-chain-file: [ biz-certs/Frank-CA.cer ]

ssl-cert-file: biz-certs/Frank-EE.cer
ssl-key-file: biz-certs/Frank-EE.key
ssl-ca-cert-file: biz-certs/Bob-Root.cer

requests:
  list:
  type: list
  issue:
  type: issue
  class: 1
  sia: [ "rsync://bandicoot.invalid/some/where/" ]
  revoke:
  type: revoke
  class: 1
  ski: "CB5K6APY-4KcGAW9jaK_cVPXKX0"
```

testpoke adds one extension to the language described in APNIC's README: the `cms-cert-chain-*` and `ssl-cert-chain-*` options, which allow one to specify a chain of intermediate certificates to be presented in the CMS or TLS protocol. APNIC's initial implementation required direct knowledge of the issuing certificate (ie, it supported a maximum chain length of one); subsequent APNIC code changes have probably relaxed this restriction, and with luck APNIC has copied testpoke's syntax to express chains of intermediate certificates.

5 Left-right protocol

The left-right protocol is really two separate client/server protocols over separate channels between the RPKI engine and the IR back end (IRBE).

The IRBE is the client for one of the subprotocols, the RPKI engine is the client for the other.

5.1 Terminology

- *IRBE*: Internet Registry Back End
- *IRDB*: Internet Registry Data Base
- *BPKI*: Business PKI
- *RPKI*: Resource PKI

5.2 initiated by the IRBE

This part of the protocol uses a kind of message-passing. Each object that the RPKI engine knows about takes five messages: "create", "set", "get", "list", and "destroy". Actions which are not just data operations on objects are handled via an SNMP-like mechanism, as if they were fields to be set. For example, to generate a keypair one "sets" the "generate-keypair" field of a BSC object, even though there is no such field in the object itself as stored in SQL. This is a bit of a kludge, but the reason for doing it as if these were variables being set is to allow composite operations such as creating a BSC, populating all of its data fields, and generating a keypair, all as a single operation. With this model, that's trivial, otherwise it's at least two round trips.

Fields can be set in either "create" or "set" operations, the difference just being whether the object already exists. A "get" operation returns all visible fields of the object. A "list" operation returns a list containing what "get" would have returned on each of those objects.

Left-right protocol objects are encoded as signed CMS messages containing XML as eContent and using an eContentType OID of `id-ct-xml` (1.2.840.113549.1.9.16.1.28). These CMS messages are in turn passed as the data for HTTPS POST operations, with an HTTP content type of "application/x-rpki" for both the POST data and the response data.

All operations allow an optional "tag" attribute which can be any alphanumeric token. The main purpose of the tag attribute is to allow batching of multiple requests into a single PDU.

5.2.1 <self/> object

A <self/> object represents one virtual RPKI engine. In simple cases where the RPKI engine operator operates the engine only on their own behalf, there will only be one <self/> object, representing the engine operator's organization, but in environments where the engine operator hosts other entities, there will be one <self/> object per hosted entity (probably including the engine operator's own organization, considered as a hosted customer of itself).

Some of the RPKI engine's configured parameters and data are shared by all hosted entities, but most are tied to a specific <self/> object. Data which are shared by all hosted entities are referred to as "per-engine" data, data which are specific to a particular <self/> object are "per-self" data.

Since all other RPKI engine objects refer to a <self/> object via a "self_id" value, one must create a <self/> object before one can usefully configure any other left-right protocol objects.

Every <self/> object has a self_id attribute, which must be specified for the "set", "get", and "destroy" actions.

Payload data which can be configured in a <self/> object:

- `use_hsm` (attribute): Whether to use a Hardware Signing Module. At present this option has no effect, as the implementation does not yet support HSMs.
- `crl_interval` (attribute): Positive integer representing the planned lifetime of an RPKI CRL for this <self/>, measured in seconds.
- `regen_margin` (attribute): Positive integer representing how long before expiration of an RPKI certificate a new one should be generated, measured in seconds. At present this only affects the one-off EE certificates associated with ROAs.
- `bpki_cert` (element): BPKI CA certificate for this <self/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages, and should be the issuer of cross-certification BPKI certificates used in <repository/>, <parent/>, and <child/> objects. If the `bpki_glue` certificate is in use (below), the `bpki_cert` certificate should be issued by the `bpki_glue` certificate; otherwise, the `bpki_cert` certificate should be issued by the per-engine `bpki_ta` certificate.
- `bpki_glue` (element): Another BPKI CA certificate for this <self/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the `bpki_glue` certificate should be the issuer of the `bpki_cert` certificate and should be issued by the per-engine `bpki_ta` certificate; if not needed, the `bpki_glue` certificate should be left unset.

Control attributes that can be set to "yes" to force actions:

- **rekey**: Start a key rollover for every RPKI CA associated with every `<parent/>` object associated with this `<self/>` object. This is the first phase of a key rollover operation.
- **revoke**: Revoke any remaining certificates for any expired key associated with any RPKI CA for any `<parent/>` object associated with this `<self/>` object. This is the second (cleanup) phase for a key rollover operation; it's separate from the first phase to leave time for new RPKI certificates to propagate and be installed.
- **reissue**: Not implemented, may be removed from protocol. Original theory was that this operation would force reissuance of any object with a changed key, but as that happens automatically as part of the key rollover mechanism this operation seems unnecessary.
- **run_now**: Force immediate processing for all tasks associated with this `<self/>` object that would ordinarily be performed under cron. Not currently implemented.
- **publish_world_now**: Force (re)publication of every publishable object for this `<self/>` object. Not currently implemented. Intended to aid in recovery if RPKI engine and publication engine somehow get out of sync.

5.2.2 `<bsc/>` object

The `<bsc/>` ("business signing context") object represents all the BPKI data needed to sign outgoing CMS or HTTPS messages. Various other objects include pointers to a `<bsc/>` object. Whether a particular `<self/>` uses only one `<bsc/>` or multiple is a configuration decision based on external requirements: the RPKI engine code doesn't care, it just cares that, for any object representing a relationship for which it must sign messages, there be a `<bsc/>` object that it can use to produce that signature.

Every `<bsc/>` object has a `bsc_id`, which must be specified for the "get", "set", and "destroy" actions. Every `<bsc/>` also has a `self_id` attribute which indicates the `<self/>` object with which this `<bsc/>` object is associated.

Payload data which can be configured in a `<isc/>` object:

- **signing_cert** (element): BPKI certificate to use when generating a signature.
- **signing_cert_crl** (element): CRL which would list `signing_cert` if it had been revoked.

Control attributes that can be set to "yes" to force actions:

- `generate_keypair`: Generate a new BPKI keypair and return a PKCS #10 certificate request. The resulting certificate, once issued, should be configured as this `<bsc/>` object's `signing_cert`.

Additional attributes which may be specified when specifying "generate_keypair":

- `key_type`: Type of BPKI keypair to generate. "rsa" is both the default and, at the moment, the only allowed value.
- `hash_alg`: Cryptographic hash algorithm to use with this keypair. "sha256" is both the default and, at the moment, the only allowed value.
- `key_length`: Length in bits of the keypair to be generated. "2048" is both the default and, at the moment, the only allowed value.

Replies to "create" and "set" actions that specify "generate-keypair" include a `<bsc-pkcs10/>` element, as do replies to "get" and "list" actions for a `<bsc/>` object for which a "generate-keypair" command has been issued. The RPKI engine stores the PKCS #10 request, which allows the IRBE to reuse the request if and when it needs to reissue the corresponding BPKI signing certificate.

5.2.3 `<parent/>` object

The `<parent/>` object represents the RPKI engine's view of a particular parent of the current `<self/>` object in the up-down protocol. Due to the way that the resource hierarchy works, a given `<self/>` may obtain resources from multiple parents, but it will always have at least one; in the case of IANA or an RIR, the parent RPKI engine may be a trivial stub.

Every `<parent/>` object has a `parent_id`, which must be specified for the "get", "set", and "destroy" actions. Every `<parent/>` also has a `self_id` attribute which indicates the `<self/>` object with which this `<parent/>` object is associated, a `bsc_id` attribute indicating the `<bsc/>` object to be used when signing messages sent to this parent, and a `repository_id` indicating the `<repository/>` object to be used when publishing issued by the certificate issued by this parent.

Payload data which can be configured in a `<parent/>` object:

- `peer_contact_uri` (attribute): HTTPS URI used to contact this parent.
- `sia_base` (attribute): The leading portion of an rsync URI that the RPKI engine should use when composing the [publication](#) URI for objects issued by the RPKI certificate issued by this parent.

- `sender_name` (attribute): Sender name to use in the up-down protocol when talking to this parent. The RPKI engine doesn't really care what this value is, but other implementations of the up-down protocol do care.
- `recipient_name` (attribute): Recipient name to use in the up-down protocol when talking to this parent. The RPKI engine doesn't really care what this value is, but other implementations of the up-down protocol do care.
- `bpki_cms_cert` (element): BPKI CMS CA certificate for this `<parent/>`. This is used as part of the certificate chain when validating incoming CMS messages. If the `bpki_cms_glue` certificate is in use (below), the `bpki_cms_cert` certificate should be issued by the `bpki_cms_glue` certificate; otherwise, the `bpki_cms_cert` certificate should be issued by the `bpki_cert` certificate in the `<self/>` object.
- `bpki_cms_glue` (element): Another BPKI CMS CA certificate for this `<parent/>`, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the `bpki_cms_glue` certificate should be the issuer of the `bpki_cms_cert` certificate and should be issued by the `bpki_cert` certificate in the `<self/>` object; if not needed, the `bpki_cms_glue` certificate should be left unset.
- `bpki_https_cert` (element): BPKI HTTPS CA certificate for this `<parent/>`. This is like the `bpki_cms_cert` object, only used for validating incoming TLS messages rather than CMS.
- `bpki_https_glue` (element): Another BPKI HTTPS CA certificate for this `<parent/>`, usually not needed. This is like the `bpki_cms_glue` certificate, only used for validating incoming TLS messages rather than CMS.

Control attributes that can be set to "yes" to force actions:

- `rekey`: This is like the `rekey` command in the `<self/>` object, but limited to RPKI CAs under this parent.
- `reissue`: This is like the `reissue` command in the `<self/>` object, but limited to RPKI CAs under this parent.
- `revoke`: This is like the `revoke` command in the `<self/>` object, but limited to RPKI CAs under this parent.

5.2.4 <child/> object

The <child/> object represents the RPKI engine's view of particular child of the current <self/> in the up-down protocol.

Every <child/> object has a `parent_id`, which must be specified for the "get", "set", and "destroy" actions. Every <child/> also has a `self_id` attribute which indicates the <self/> object with which this <child/> object is associated.

Payload data which can be configured in a <child/> object:

- `bpki_cert` (element): BPKI CA certificate for this <child/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages. If the `bpki_glue` certificate is in use (below), the `bpki_cert` certificate should be issued by the `bpki_glue` certificate; otherwise, the `bpki_cert` certificate should be issued by the `bpki_cert` certificate in the <self/> object.
- `bpki_glue` (element): Another BPKI CA certificate for this <child/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the `bpki_glue` certificate should be the issuer of the `bpki_cert` certificate and should be issued by the `bpki_cert` certificate in the <self/> object; if not needed, the `bpki_glue` certificate should be left unset.

Control attributes that can be set to "yes" to force actions:

- `reissue`: Not implemented, may be removed from protocol.

5.2.5 <repository/> object

The <repository/> object represents the RPKI engine's view of a particular [publication](#) repository used by the current <self/> object.

Every <repository/> object has a `repository_id`, which must be specified for the "get", "set", and "destroy" actions. Every <repository/> also has a `self_id` attribute which indicates the <self/> object with which this <repository/> object is associated.

Payload data which can be configured in a <repository/> object:

- `peer_contact_uri` (attribute): HTTPS URI used to contact this repository.
- `bpki_cms_cert` (element): BPKI CMS CA certificate for this <repository/>. This is used as part of the certificate chain when validating incoming CMS messages. If the `bpki_cms_glue` certificate is in use (below), the `bpki_cms_cert` certificate should be issued by the `bpki_cms_glue`

certificate; otherwise, the `bpki_cms_cert` certificate should be issued by the `bpki_cert` certificate in the `<self/>` object.

- `bpki_cms_glue` (element): Another BPKI CMS CA certificate for this `<repository/>`, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the `bpki_cms_glue` certificate should be the issuer of the `bpki_cms_cert` certificate and should be issued by the `bpki_cert` certificate in the `<self/>` object; if not needed, the `bpki_cms_glue` certificate should be left unset.
- `bpki_https_cert` (element): BPKI HTTPS CA certificate for this `<repository/>`. This is like the `bpki_cms_cert` object, only used for validating incoming TLS messages rather than CMS.
- `bpki_https_glue` (element): Another BPKI HTTPS CA certificate for this `<repository/>`, usually not needed. This is like the `bpki_cms_glue` certificate, only used for validating incoming TLS messages rather than CMS.

At present there are no control attributes for `<repository/>` objects.

5.2.6 `<route_origin/>` object

The `<route_origin/>` object is a kind of prototype for a ROA. It contains all the information needed to generate a ROA once the RPKI engine obtains the appropriate RPKI certificates from its parent(s).

Note that a `<route_origin/>` object represents a ROA to be generated on behalf of `<self/>`, not on behalf of a `<child/>`. Thus, a hosted entity that has no children but which does need to generate ROAs would be represented by a hosted `<self/>` with no `<child/>` objects but one or more `<route_origin/>` objects. While lumping ROA generation in with the other RPKI engine activities may seem a little odd at first, it's a natural consequence of the design requirement that the RPKI daemon never transmit private keys across the network in any form; given this requirement, the RPKI engine that holds the private keys for an RPKI certificate must also be the engine which generates any ROAs that derive from that RPKI certificate.

The precise content of the `<route_origin/>` has changed over time as the underlying ROA specification has changed. The current implementation as of this writing matches what we expect to see in draft-ietf-sidr-roa-format-03, once it is issued. In particular, note that the `exactMatch` boolean from the -02 draft has been replaced by the `prefix` and `maxLength` encoding used in the -03 draft.

Payload data which can be configured in a `<route_origin/>` object:

- `as_number` (attribute): Autonomous System Number (ASN) to place in the generated ROA. A single ROA can only grant authorization to a single ASN;

multiple ASNs require multiple ROAs, thus multiple `<route_origin/>` objects.

- `ipv4` (attribute): List of IPv4 prefix and `maxLength` values, see below for format.
- `ipv6` (attribute): List of IPv6 prefix and `maxLength` values, see below for format.

Control attributes that can be set to "yes" to force actions:

- `suppress_publication`: Not implemented, may be removed from protocol.

The lists of IPv4 and IPv6 prefix and `maxLength` values are represented as comma-separated text strings, with no whitespace permitted. Each entry in such a string represents a single prefix/`maxLength` pair.

ABNF for these address lists:

```
<ROAIPAddress> ::= <address> "/" <prefixlen> [ "-" <max_prefixlen> ]
                  ; Where <max_prefixlen> defaults to the same
                  ; value as <prefixlen>.

<ROAIPAddressList> ::= <ROAIPAddress> *( "," <ROAIPAddress> )
```

For example, "10.0.1.0/24-32,10.0.2.0/24", which is a shorthand form of "10.0.1.0/24-32,10.0.2.0/24-24".

5.3 Operations initiated by the RPKI engine

The left-right protocol also includes queries from the RPKI engine back to the IRDB. These queries do not follow the message-passing pattern used in the IRBE-initiated part of the protocol. Instead, there's a single query back to the IRDB, with a corresponding response. The CMS and HTTPS encoding are the same as in the rest of the protocol, but the BPKI certificates will be different as the back-queries and responses form a separate communication channel.

5.3.1 `<list_resources/>` messages

The `<list_resources/>` query and response allow the RPKI engine to ask the IRDB for information about resources assigned to a particular child. The query must

include both a "self_id" attribute naming the <self/> that is making the request and also a "child_id" attribute naming the child that is the subject of the query. The query and response also allow an optional "tag" attribute of the same form used elsewhere in this protocol, to allow batching.

A <list_resources/> response includes the following attributes, along with the tag (if specified), self_id, and child_id copied from the request:

- **valid_until**: A timestamp indicating the date and time at which certificates generated by the RPKI engine for these data should expire. The timestamp is expressed as an XML `xsd:dateTime`, must be expressed in UTC, and must carry the "Z" suffix indicating UTC.
- **asn**: A list of autonomous sequence numbers, expressed as a comma-separated sequence of decimal integers with no whitespace.
- **ipv4**: A list of IPv4 address prefixes and ranges, expressed as a comma-separated list of prefixes and ranges with no whitespace. See below for format details.
- **ipv6**: A list of IPv6 address prefixes and ranges, expressed as a comma-separated list of prefixes and ranges with no whitespace. See below for format details.

Entries in a list of address prefixes and ranges can be either prefixes, which are written in the usual address/prefixlen notation, or ranges, which are expressed as a pair of addresses denoting the beginning and end of the range, written in ascending order separated by a single "-" character. This format is superficially similar to the format used for prefix and maxLength values in the <route_origin/> object, but the semantics differ: note in particular that <route_origin/> objects don't allow ranges, while <list_resources/> messages don't allow a maxLength specification.

5.4 Error handling

Error in this protocol are handled at two levels.

Since all messages in this protocol are conveyed over HTTPS connections, basic errors are indicated via the HTTP response code. 4xx and 5xx responses indicate that something bad happened. Errors that make it impossible to decode a query or encode a response are handled in this way.

Where possible, errors will result in a <report_error/> message which takes the place of the expected protocol response message. <report_error/> messages are CMS-signed XML messages like the rest of this protocol, and thus can be archived to provide an audit trail.

`<report_error/>` messages only appear in replies, never in queries. The `<report_error/>` message can appear on either the "forward" (IRBE as client of RPKI engine) or "back" (RPKI engine as client of IRDB) communication channel.

The `<report_error/>` message includes an optional "tag" attribute to assist in matching the error with a particular query when using batching, and also includes a "self_id" attribute indicating the `<self/>` that issued the error.

The error itself is conveyed in the `error_code` (attribute). The value of this attribute is a token indicating the specific error that occurred. At present this will be the name of a Python exception; the production version of this protocol will nail down the allowed error tokens here, probably in the RelaxNG schema.

The body of the `<report_error/>` element itself is an optional text string; if present, this is debugging information. At present this capability is not used, debugging information goes to syslog.

6 Publication protocol

The publication protocol is really two separate client/server protocols, between different parties.

The first is a configuration protocol for an IRBE to use to configure a publication engine, the second is the interface by which authorized clients request publication of specific objects.

Much of the architecture of the publication protocol is borrowed from the [left-right protocol](#): like the left-right protocol, the publication protocol uses CMS-wrapped XML over HTTPS with the same eContentType OID and the same HTTPS content-type, and the overall style of the XML messages is very similar to the left-right protocol. All operations allow an optional "tag" attribute to allow batching.

The publication engine operates a single HTTPS server which serves both of these subprotocols. The two subprotocols share a single server port, but use distinct URLs to allow demultiplexing.

6.1 Terminology

- *IRBE*: Internet Registry Back End
- *IRDB*: Internet Registry Data Base
- *BPKI*: Business PKI
- *RPKI*: Resource PKI

6.2 Publication control subprotocol

The control subprotocol reuses the message-passing design of the left-right protocol. Configured objects support the "create", "set", "get", "list", and "destroy" actions, or a subset thereof when the full set of actions doesn't make sense.

6.2.1 <config/> object

The <config/> object allows configuration of data that apply to the entire publication server rather than a particular client.

There is exactly one <config/> object in the publication server, and it only supports the "set" and "get" actions – it cannot be created or destroyed.

Payload data which can be configured in a <config/> object:

- `bpki_crl` (element): This is the BPKI CRL used by the publication server when signing the CMS wrapper on responses in the publication subprotocol. As the CRL must be updated at regular intervals, it's not practical to restart the publication server when the BPKI CRL needs to be updated. The BPKI model doesn't require use of a BPKI CRL between the IRBE and the publication server, so we can use the publication control subprotocol to update the BPKI CRL.

6.2.2 <client/> object

The <client/> object represents one client authorized to use the publication server.

The <client/> object supports the full set of "create", "set", "get", "list", and "destroy" actions. Each client has a "client_id" attribute, which is used in responses and must be specified in "set", "get", or "destroy" actions.

Payload data which can be configured in a <client/> object:

- `base_uri` (attribute): This is the base URI below which this client is allowed to publish data. The publication server may impose additional constraints in the case of a child publishing beneath its parent.
- `bpki_cert` (element): BPKI CA certificate for this <client/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages. If the `bpki_glue` certificate is in use (below), the `bpki_cert` certificate should be issued by the `bpki_glue` certificate; otherwise, the `bpki_cert` certificate should be issued by the publication engine's `bpki_ta` certificate.
- `bpki_glue` (element): Another BPKI CA certificate for this <client/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the `bpki_glue` certificate

should be the issuer of the `bpki_cert` certificate and should be issued by the publication engine's `bpki_ta` certificate; if not needed, the `bpki_glue` certificate should be left unset.

6.3 Publication subprotocol

The publication subprotocol is structured somewhat differently from the publication control protocol. Objects in the publication subprotocol represent objects to be published or objects to be withdrawn from publication. Each kind of object supports two actions: "publish" and "withdraw". In each case the XML element representing the object to be published or withdrawn has a "uri" attribute which contains the publication URI. For "publish" actions, the XML element body contains the DER object to be published, encoded in Base64; for "withdraw" actions, the XML element body is empty.

In theory, the detailed access control for each kind of object might be different. In practice, as of this writing, access control for all objects is a simple check that the client's "base_uri" is a leading substring of the publication URI. Details of why access control might need to become more complicated are discussed in a later section.

6.3.1 `<certificate/>` object

The `<certificate/>` object represents an RPKI certificate to be published or withdrawn.

6.3.2 `<crl/>` object

The `<crl/>` object represents an RPKI CRL to be published or withdrawn.

6.3.3 `<manifest/>` object

The `<manifest/>` object represents an RPKI publication manifest to be published or withdrawn.

Note that part of the reason for the batching support in the publication protocol is because *every* publication or withdrawal action requires a new manifest, thus every publication or withdrawal action will involve at least two objects.

6.3.4 `<roa/>` object

The `<roa/>` object represents a ROA to be published or withdrawn.

6.4 Error handling

Error in this protocol are handled at two levels.

Since all messages in this protocol are conveyed over HTTPS connections, basic errors are indicated via the HTTP response code. 4xx and 5xx responses indicate that something bad happened. Errors that make it impossible to decode a query or encode a response are handled in this way.

Where possible, errors will result in a `<report_error/>` message which takes the place of the expected protocol response message. `<report_error/>` messages are CMS-signed XML messages like the rest of this protocol, and thus can be archived to provide an audit trail.

`<report_error/>` messages only appear in replies, never in queries. The `<report_error/>` message can appear in both the control and [publication](#) subprotocols.

The `<report_error/>` message includes an optional "tag" attribute to assist in matching the error with a particular query when using batching.

The error itself is conveyed in the `error_code` (attribute). The value of this attribute is a token indicating the specific error that occurred. At present this will be the name of a Python exception; the production version of this protocol will nail down the allowed error tokens here, probably in the RelaxNG schema.

The body of the `<report_error/>` element itself is an optional text string; if present, this is debugging information. At present this capability is not used, debugging information goes to syslog.

6.5 Additional access control considerations.

As detailed above, the publication protocol is trivially simple. This glosses over two bits of potential complexity:

- In the case where parent and child are sharing a repository, we'd like to nest child under parent, because testing has demonstrated that even on relatively slow hardware the delays involved in setting up separate rsync connections tend to dominate synchronization time for relying parties.
- The repository operator might also want to do some checks to assure itself that what it's about to allow the RPKI engine to publish is not dangerous toxic waste.

The up-down protocol includes a mechanism by which a parent can suggest a publication URI to each of its children. The children are not required to accept this hint, and the children must make separate arrangements with the repository operator (who might or might not be the same as the entity that hosts the children's RPKI engine operations) to use the suggested publication point, but if everything works out, this al-

lows children to nest cleanly under their parents publication points, which helps reduce synchronization time for relying parties.

In this case, one could argue that the publication server is responsible for preventing one of its clients (the child in the above description) from stomping on data published by another of its clients (the parent in the above description). This goes beyond the basic access check and requires the publication server to determine whether the parent has given its consent for the child to publish under the parent. Since the RPKI certificate profile requires the child's publication point to be indicated in an SIA extension in a certificate issued by the parent to the child, the publication engine can infer this permission from the parent's issuance of a certificate to the child. Since, by definition, the parent also uses this publication server, this is an easy check, as the publication server should already have the parent's certificate available by the time it needs to check the child's certificate.

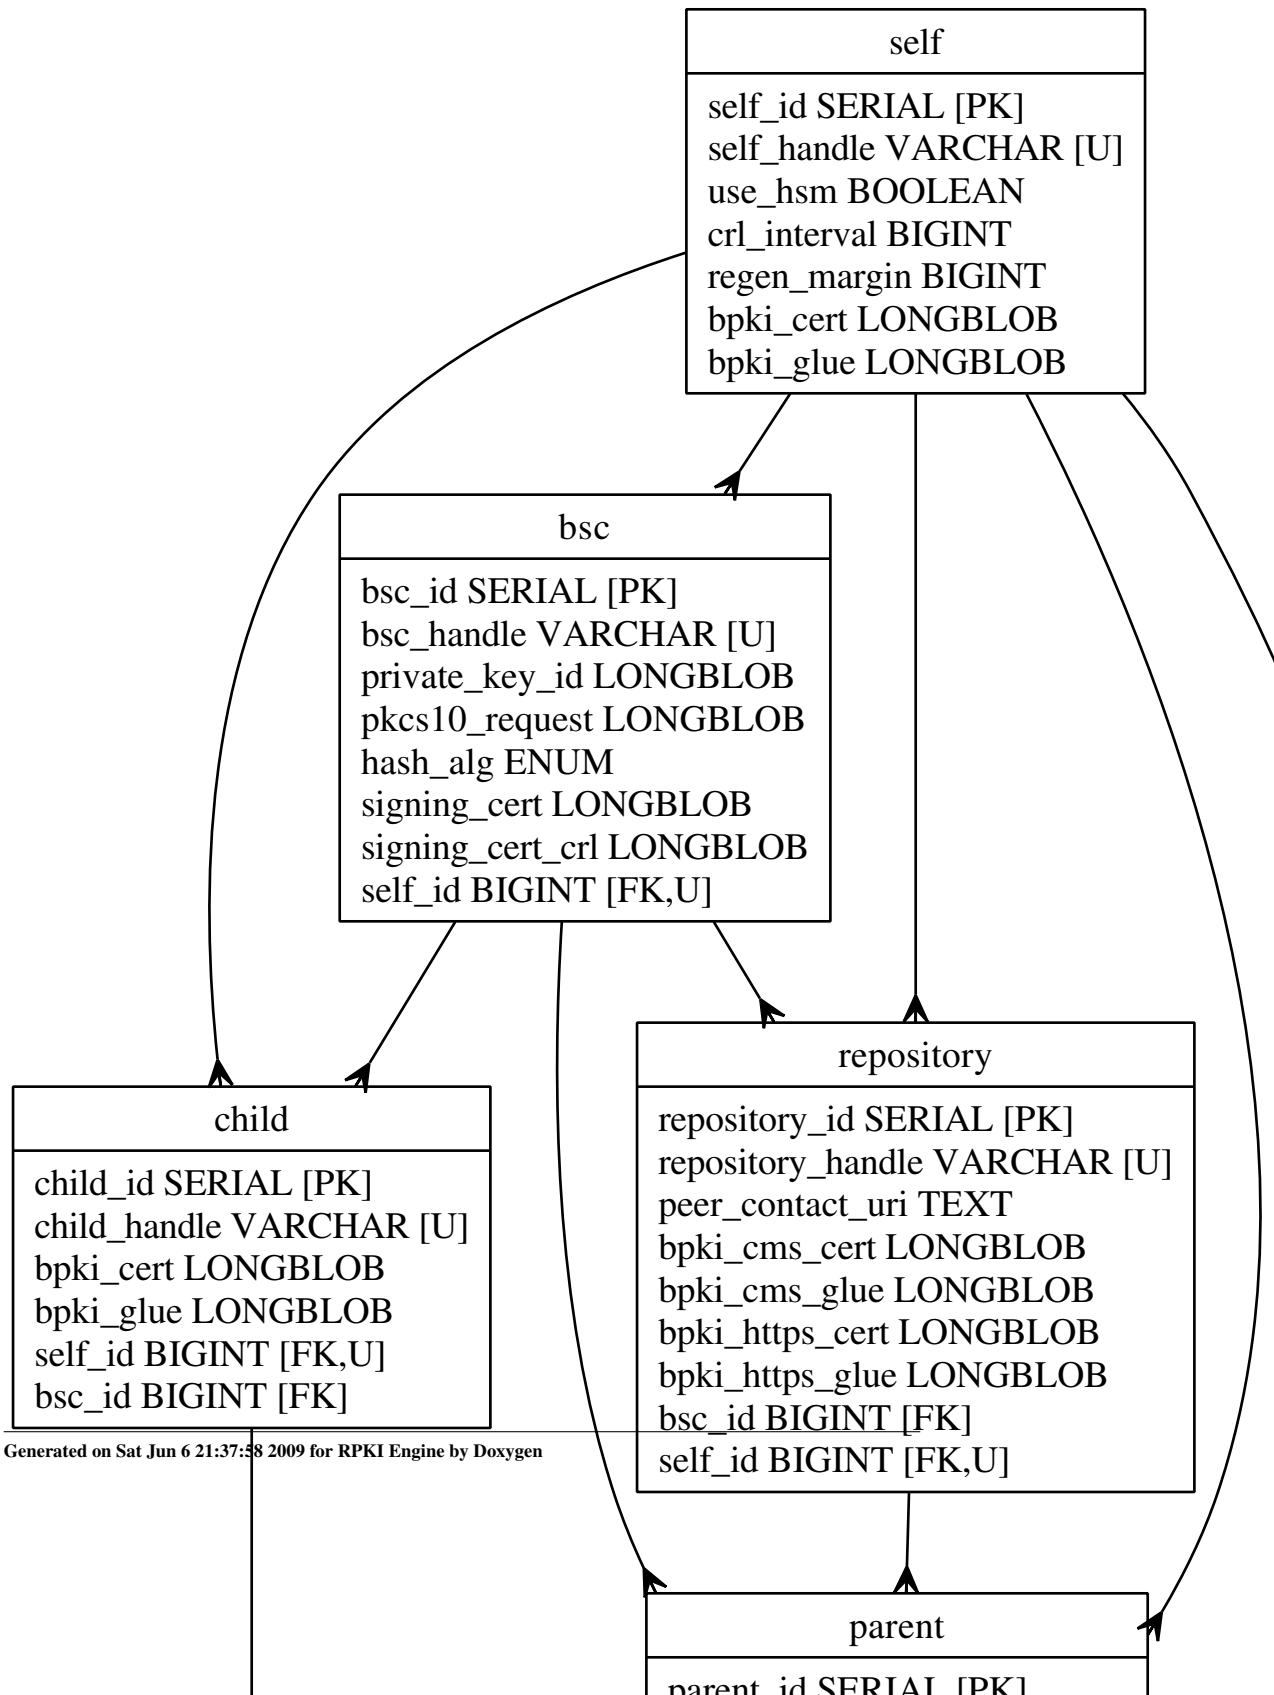

The previous paragraph only covers a "publish" action for a <certificate/> object. For "publish" actions on other objects, the publication server would need to trace permission back to the certificate issued by the parent; for "withdraw" actions, the publication server would have to perform the same checks it would perform for a "publish" action, using the current published data before withdrawing it. The latter in turn implies an ordering constraint on "withdraw" actions in order to preserve the data necessary for these access control decisions; as this may prove impractical, the publication server may probably need to make periodic sweeps over its published data looking for orphaned objects, but that's probably a good idea anyway.

Note that, in this publication model, any agreement that the repository makes to publish the RPKI engine's output is conditional upon the object to be published passing whatever access control checks the publication server imposes.

8 BPKI model

The "business PKI" (BPKI) is the PKI used to authenticate communication on the up-down, left-right, and publication protocols.

BPKI certificates are *not* resource PKI (RPKI) certificates. The BPKI is a separate PKI that represents relationships between the various entities involved in the production side of the RPKI system. In most cases the BPKI tree will follow existing business relationships, hence the name "BPKI".

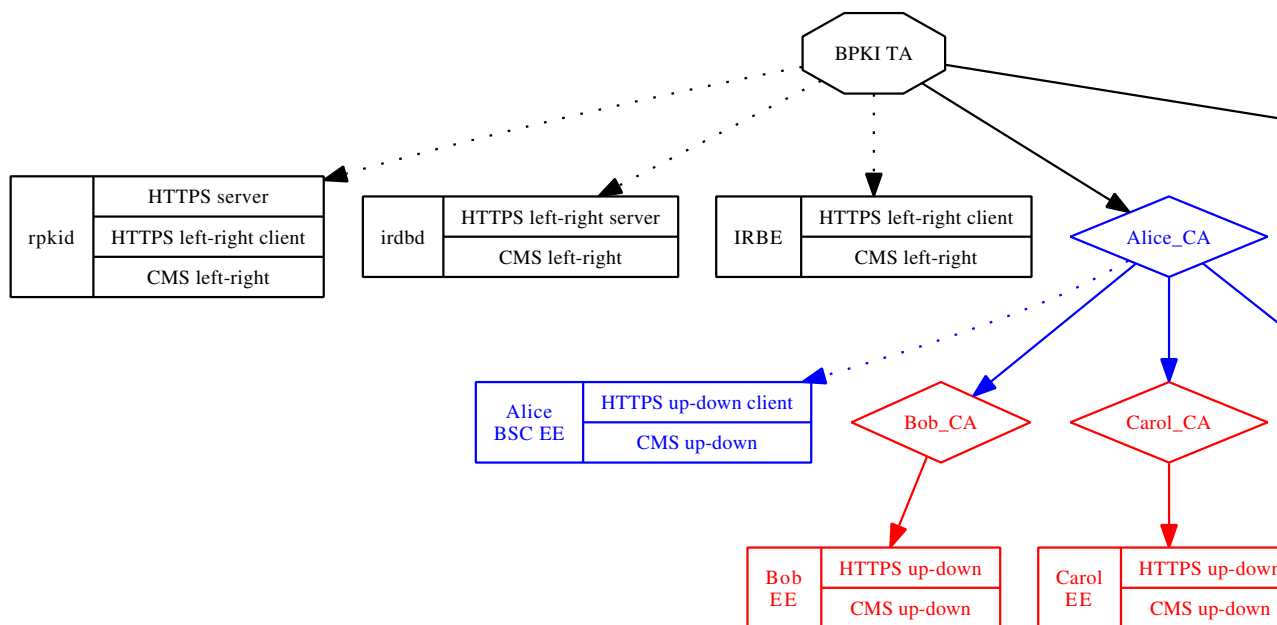

Setup of the BPKI is handled by the back end; for the most part, [rpkid](#) and [pubd](#) just use the result. The one place where the engines are directly involved in creation of new BPKI certificates is in the production of end-entity certificates for use by the engines.

There are a few design principals that underly the chosen BPKI model:

- Each engine should rely on a single BPKI trust anchor which is controlled by the back end entity that runs the engine; all other trust material should be cross-certified into the engine's BPKI tree.
- Private keys must never transit the network.
- Except for end entity certificates, the engine should only have access to the BPKI certificates; in particular, the private key for the BPKI trust anchor should not be accessible to the engine.
- The number of BPKI keys and certificates that the engine has to manage should be no larger than is necessary.

[rpkid](#)'s hosting model adds an additional constraint: [rpkid](#)'s BPKI trust anchor belongs to the entity operating [rpkid](#), but the entities hosted by [rpkid](#) should have control of their own BPKI private keys. This implies the need for an additional layer of BPKI certificate hierarchy within [rpkid](#).

Here is a simplified picture of what the BPKI might look like for an [rpkid](#) operator that hosts two entities, "Alice" and "Ellen":

Black objects belong to the hosting entity, blue objects belong to the hosted entities, red objects are cross-certified objects from the hosted entities' peers. The arrows indicate certificate issuance: solid arrows are the ones that **rpkid** will care about during certificate validation, dotted arrows show the origin of the EE certificates that **rpkid** uses to sign CMS and TLS messages.

There's one nasty bit where the model had to bend to fit the current state of the underlying protocols: it's not possible to use exactly the same BPKI keys and certificates for HTTPS and CMS. The reason for this is simple: each hosted entity has its own BPKI, as does the hosting entity, but the HTTPS listener is shared. The only ways to avoid sharing the HTTPS server certificate would be to use separate listeners for each hosted entity, which scales poorly, or to rely on the TLS "Server Name Indication" extension (RFC 4366 3.1) which is not yet widely implemented.

The certificate tree looks complicated, but the set of certificates needed to build any particular validation chain is obvious, again excepting the HTTPS server case, where the client certificate is the first hint that the engine has of the client's identity, so the server must be prepared to accept any current client certificate.

Detailed instructions on how to build a BPKI are beyond the scope of this document, but one can handle simple cases using the OpenSSL command line tool and [cross-certify.py](#); the latter is a tool designed specifically for the purpose of generating the cross-certification certificates needed to splice foreign trust material into a BPKI tree.

The BPKI tree for a **pubd** instance is similar to to the BPKI tree for an **rpkid** instance, but is a bit simpler, as **pubd** does not provide hosting in the same sense that **rpkid** does: **pubd** is a relatively simple server that publishes objects as instructed by its clients.

Here's a simplified picture of what the BPKI might look like for a [pubd](#) operator that serves two clients, "Alice" and "Bob":

While it is likely that RIRs (at least) will operate both [rpki](#) and [pubd](#) instances, the two functions are conceptually separate. As far as [pubd](#) is concerned, it doesn't matter who operates the [rpki](#) instance: [pubd](#) just has clients, each of which has trust material that has been cross-certified into [pubd](#)'s BPKI. Similarly, [rpki](#) doesn't really care who operates a [pubd](#) instance that it's been configured to use, it just treats that [pubd](#) as a foreign BPKI whose trust material has to be cross-certified into its own BPKI. Cross certification itself is done by the back end operator, using [cross_certify](#) or some equivalent tool; the resulting BPKI certificates are configured into [rpki](#) and [pubd](#) via the left-right protocol and the control subprotocol of the [publication](#) protocol, respectively.

Because the BPKI tree is almost entirely controlled by the operating entity, CRLs are not necessary for most of the BPKI. The one exception to this is the EE certificates issued under the cross-certification points. These EE certificates are generated by the peer, not the local operator, and thus require CRLs. Because of this, both [rpki](#) and [pubd](#) require regular updates of certain BPKI CRLs, again via the left-right and [publication](#) control protocols.

Because the left-right protocol and the [publication](#) control subprotocol are used to configure BPKI certificates and CRLs, they cannot themselves use certificates and CRLs configured in this way. This is why the configuration files for [rpki](#) and [pubd](#) require static configuration of the left-right and [publication](#) control certificates.

9 Namespace Documentation

9.1 Package cross_certify

Functions

- def `make_ext`
- def `usage`

Variables

- tuple `cert` = `rpki.x509.X509(POWpkix = x)`
- `child` = None
- `critical` = False,
- tuple `f` = `open(serial_file, "r")`
- `keypair` = None
- tuple `lifetime` = `rpki.sundial.timedelta(days = 30)`
- `notAfter` = `now+lifetime`
- tuple `now` = `rpki.sundial.now()`
- `output` = None
- `parent` = None
- tuple `serial` = `f.read()`
- `serial_file` = None
- tuple `value` = `child.get_SKI()`
- tuple `x` = `POW.pkix.Certificate()`

9.1.1 Detailed Description

Cross-certification tool to issue a new certificate based on an old one that was issued by somebody else. The point of the exercise is to end up with a valid certificate in our own BPKI which has the same subject name and subject public key as the one we're replacing.

```
Usage: python cross_certify.py { -i | --in      } input_cert
                        { -c | --ca      } issuing_cert
                        { -k | --key      } issuing_cert_key
                        { -s | --serial } serial_filename
                        [ { -h | --help } ]
                        [ { -o | --out   } filename (default: stdout) ]
                        [ { -l | --lifetime } timedelta (default: 30 days) ]
```

```

9.5.1 Detailed Description

Trivial RPKI up-down protocol root server, for testing. Not suitable for production use. Overrides a bunch of method definitions from the `rpki.*` classes in order to reuse as much code as possible.

Usage: `python rootd.py [{ -c | --config } configfile] [{ -h | --help }]`

Default configuration file is `rootd.conf`, override with `--config` option.

`$Id: rootd.py 2481 2009-06-01 05:07:46Z sra $`

- string `rpki_content_type` = "application/x-rpki"
- `want_persistent_client` = True
- `want_persistent_server` = True

9.10.1 Detailed Description

HTTPS utilities, both client and server.

At the moment this only knows how to use the PEM certs in my subversion repository; generalizing it would not be hard, but the more general version should use SQL anyway.

```
$Id: https.py 2493 2009-06-04 18:30:40Z sra $
```

9.10.2 Function Documentation

9.10.2.1 `def rpki.https.build_https_ta_cache (certs)`

Package up a collection of certificates into a form suitable for use as a dynamic HTTPS trust anchor set. Precise format of this collection is an internal conspiracy within the rpki.https module; at one point it was a POW.X509Store object, at the moment it's a Python set, what it will be tomorrow is nobody else's business.

Definition at line 745 of file https.py.

9.10.2.2 **def rpki.https.client (*msg*, *client_key*, *client_cert*, *server_ta*, *url*, *callback*, *errback*)**

Open client HTTPS connection, send a message, set up callbacks to handle response.

Definition at line 687 of file https.py.

9.10.2.3 **def rpki.https.logger (*self*, *msg*)**

Definition at line 170 of file https.py.

9.10.2.4 **def rpki.https.server (*handlers*, *server_key*, *server_cert*, *port*, *host* = "", *client_ta* = (), *dynamic_https_trust_anchor* = None)**

Run an HTTPS server and wait (forever) for connections.

Definition at line 731 of file https.py.

9.10.3 Variable Documentation

9.10.3.1 **dictionary rpki::https.client_queues = {}**

Definition at line 685 of file https.py.

9.10.3.2 **rpki::https.debug = False**

Definition at line 52 of file https.py.

9.10.3.3 rpki::https.debug_tls_certs = False

Definition at line 49 of file https.py.

9.10.3.4 tuple rpki::https.default_http_version = (1, 0)

Definition at line 61 of file https.py.

9.10.3.5 tuple rpki::https.default_timeout = rpki.sundial.timedelta(seconds = 90)

Definition at line 59 of file https.py.

9.10.3.6 string rpki::https.rpki_content_type = "application/x-rpki"

Definition at line 43 of file https.py.

9.10.3.7 rpki::https.want_persistent_client = True

Definition at line 55 of file https.py.

9.10.3.8 rpki::https.want_persistent_server = True

Definition at line 56 of file https.py.

9.11 Package rpki.ipaddrs**Classes**

- class [v4addr](#)
- class [v6addr](#)

9.11.1 Detailed Description

Classes to represent IP addresses.

Given some of the other operations we need to perform on them, it's most convenient to represent IP addresses as Python "long" values. The classes in this module just wrap suitable read/write syntax around the underlying "long" type.

These classes also supply a "bits" attribute for use by other code built on these classes; for the most part, IPv6 addresses really are just IPv4 addresses with more bits, so we supply the number of bits once, here, thus avoiding a lot of duplicate code elsewhere.

9.13.2 Function Documentation

9.13.2.1 `def rpki.log.init (ident = "rpki", flags =
syslog.LOG_PID | syslog.LOG_PERROR, facility =
syslog.LOG_DAEMON)`

Initialize logging system.

Definition at line 50 of file log.py.

9.13.2.2 `def rpki.log.set_trace (enable)`

Enable or disable call tracing.

Definition at line 62 of file log.py.

9.13.2.3 `def rpki.log.trace ()`

Execution trace -- where are we now, and whence came we here?

Definition at line 90 of file log.py.

9.13.3 Variable Documentation

9.13.3.1 tuple rpki::log.debug = logger(syslog.LOG_DEBUG)

Definition at line 88 of file log.py.

9.13.3.2 rpki::log::enable_trace = False

Whether call tracing is enabled.

Definition at line 40 of file log.py.

9.13.3.3 tuple rpki::log.error = logger(syslog.LOG_ERR)

Definition at line 84 of file log.py.

9.13.3.4 tuple rpki::log.info = logger(syslog.LOG_INFO)

Definition at line 87 of file log.py.

9.13.3.5 tuple rpki::log.note = logger(syslog.LOG_NOTICE)

Definition at line 86 of file log.py.

9.13.3.6 int rpki::log.pid = 0

Definition at line 48 of file log.py.

9.13.3.7 string rpki::log.tag = ""

Definition at line 47 of file log.py.

9.13.3.8 rpki::log::use_syslog = False

Whether to use syslog.

Definition at line 45 of file log.py.

9.13.3.9 tuple rpki::log.warn = logger(syslog.LOG_WARNING)

Definition at line 85 of file log.py.

9.14 Package rpki.manifest**Classes**

- class [FileAndHash](#)
- class [FilesAndHashes](#)
- class [Manifest](#)

9.14.1 Detailed Description

Signed manifests. This is just the ASN.1 encoder, the rest is in rpki.x509 with the rest of the DER_object code.

Note that rpki.x509.SignedManifest implements the signed manifest; the structures here are just the payload of the CMS eContent field.

```
$Id: manifest.py 2424 2009-05-11 06:37:32Z sra $
```

```
Copyright (C) 2007--2008 American Registry for Internet Numbers ("ARIN")
```

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

- class [roa_prefix_ipv4](#)
- class [roa_prefix_ipv6](#)
- class [roa_prefix_set](#)
- class [roa_prefix_set_ipv4](#)
- class [roa_prefix_set_ipv6](#)

Functions

- def [_bs2long](#)
- def [_long2bs](#)
- def [_rsplit](#)
- def [test1](#)
- def [test2](#)

Variables

- string [inherit_token](#) = "<inherit>"
Token used to indicate inheritance in read and print syntax.

9.18.1 Detailed Description

Classes dealing with sets of resources.

The basic mechanics of a resource set are the same for any of the resources we handle (ASNs, IPv4 addresses, or IPv6 addresses), so we can provide the same operations on any of them, even though the underlying details vary.

We also provide some basic set operations (union, intersection, etc).

```

9.18.2 Function Documentation

9.18.2.1 `def rpki.resource_set._bs2long (bs, addrlen, fill)` [private]

Utility function to convert a bitstring (POW.pkix tuple representation) into a Python long.

Definition at line 499 of file `resource_set.py`.

9.18.2.2 `def rpki.resource_set._long2bs (number, addrlen, prefixlen = None, strip = None) [private]`

Utility function to convert a Python long into a POW.pkix tuple bitstring. This is a bit complicated because it supports the fiendishly compact encoding used in RFC 3779.

Definition at line 511 of file resource_set.py.

9.18.2.3 `def rpki.resource_set._rsplit (rset, that) [private]`

Utility function to split a resource range into two resource ranges.

Definition at line 190 of file resource_set.py.

9.18.2.4 `def rpki.resource_set.test1 (t, s1, s2)`

Definition at line 868 of file resource_set.py.

9.18.2.5 `def rpki.resource_set.test2 (t, s1, s2)`

Definition at line 901 of file resource_set.py.

9.18.3 Variable Documentation

9.18.3.1 `rpki::resource_set::inherit_token = "<inherit>"`

Token used to indicate inheritance in read and print syntax.

Definition at line 48 of file resource_set.py.

9.19 Package rpki.roa

Classes

- class [ROAIPAddress](#)

- class [ROAIPAddresses](#)
- class [ROAIPAddressFamilies](#)
- class [ROAIPAddressFamily](#)
- class [RouteOriginAttestation](#)

9.19.1 Detailed Description

ROA (Route Origin Authorization).

At the moment this is just the ASN.1 encoder.

This corresponds to draft-ietf-sidr-roa-format, which is a work in progress, so this may need updating later.

```
$Id: roa.py 2424 2009-05-11 06:37:32Z sra $
```

```
Copyright (C) 2007--2008 American Registry for Internet Numbers ("ARIN")
```

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS" AND ARIN DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS. draft-ietf-sidr-roa-format-03 2.1.3.2 specifies:

```
RouteOriginAttestation ::= SEQUENCE {
    version [0] INTEGER DEFAULT 0,
    asID ASID,
    ipAddrBlocks SEQUENCE OF ROAIPAddressFamily }
```

```
ASID ::= INTEGER
```

```
ROAIPAddressFamily ::= SEQUENCE {
    addressFamily OCTET STRING (SIZE (2..3)),
    addresses SEQUENCE OF ROAIPAddress }
```

```
ROAIPAddress ::= SEQUENCE {
    address IPAddress,
    maxLength INTEGER OPTIONAL }
```

```
IPAddress ::= BIT STRING
```

9.20 Package rpki.rpki_engine

Classes

- class [ca_detail_obj](#)
- class [ca_obj](#)
- class [child_cert_obj](#)
- class [revoked_cert_obj](#)
- class [rpkid_context](#)

9.20.1 Detailed Description

Global context for rpkid.

\$Id: rpki_engine.py 2493 2009-06-04 18:30:40Z sra \$

- class [RSAPublic](#)
- class [SignedManifest](#)
- class [X509](#)
- class [XML_CMS_object](#)

Functions

- def [calculate_SKI](#)
- def [POWify_OID](#)

9.24.1 Detailed Description

One X.509 implementation to rule them all...

...and in the darkness hide the twisty maze of partially overlapping X.509 support packages in Python.

There are several existing packages, none of which do quite what I need, due to age, lack of documentation, specialization, or lack of foresight on somebody's part (perhaps mine). This module attempts to bring together the functionality I need in a way that hides at least some of the nasty details. This involves a lot of format conversion.

\$Id: x509.py 2496 2009-06-05 01:57:44Z sra \$

9.24.2 Function Documentation

9.24.2.1 def rpki.x509.calculate_SKI (*public_key_der*)

Calculate the SKI value given the DER representation of a public key, which requires first peeling the ASN.1 wrapper off the key.

Definition at line 50 of file x509.py.

9.24.2.2 def rpki.x509.POWify_OID (*oid*)

Utility function to convert tuple form of an OID to the dotted-decimal string form that POW uses.

Definition at line 655 of file x509.py.

9.25 Package rpki.xml_utils

Classes

- class [base_elt](#)
- class [data_elt](#)
- class [msg](#)
- class [sax_handler](#)

9.25.1 Detailed Description

XML utilities.

\$Id: xml_utils.py 2493 2009-06-04 18:30:40Z sra \$

9.26 Package rpkiid

Functions

- def [main](#)

Variables

- string [cfg_file](#) = "rpkiid.conf"
- [profile](#) = None

9.26.1 Detailed Description

RPKI engine daemon. This is still very much a work in progress.

```
Usage: python rpkiid.py [ { -c | --config } configfile ]
                        [ { -h | --help } ]
                        [ { -p | --profile } outputfile ]
```

Default configuration file is rpkiid.conf, override with --config option.

Public Attributes

- [caller_function](#)
- [done_callback](#)
- [item_callback](#)
- [iterator](#)

10.37.1 Detailed Description

Iteration construct for event-driven code. Takes three arguments:

- Some kind of iterable object
- A callback to call on each item in the iteration
- A callback to call after the iteration terminates.

The item callback receives two arguments: the callable iterator object and the current value of the iteration. It should call the iterator (or arrange for the iterator to be called) when it is time to continue to the next item in the iteration.

The termination callback receives no arguments.

Definition at line 26 of file `async.py`.

- def [errback](#)
- def [handler](#)
- def [is_set](#)

- def `runq`
- def `seconds_until_wakeup`
- def `set`
- def `set_errback`
- def `set_handler`

Public Attributes

- `errback`
- `handler`
- `when`

Static Public Attributes

- list `queue` = []

Timer queue, shared by all `timer` instances (there can be only one queue).

10.38.1 Detailed Description

Timer construct for event-driven code. It can be used in either of two ways:

- As a virtual class, in which case the subclass should provide a `handler()` method to receive the wakeup event when the timer expires; or
- By setting an explicit handler callback, either via the constructor or the `set_handler()` method.

Subclassing is probably more Pythonic, but setting an explicit handler turns out to be very convenient when combined with bound methods to other objects.

Definition at line 77 of file `async.py`.

10.38.2 Member Function Documentation

10.38.2.1 `def rpki.async.timer.__cmp__(self, other)`

Definition at line 121 of file `async.py`.

10.38.2.2 `def rpki.async.timer.__init__ (self, handler = None, errback = None)`

Definition at line 97 of file `async.py`.

10.38.2.3 `def rpki.async.timer.__repr__ (self)`

Definition at line 180 of file `async.py`.

10.38.2.4 `def rpki.async.timer.cancel (self)`

Cancel a timer, if it was set.

Definition at line 124 of file `async.py`.

10.38.2.5 `def rpki.async.timer.clear (cls)`

Cancel every timer on the queue. We could just throw away the queue content, but this way we can notify subclasses that provide their own `cancel()` method.

Definition at line 206 of file `async.py`.

10.38.2.6 `def rpki.async.timer.errback (self, e)`

Error callback. May be overridden, or set with `set_errback()`.

Definition at line 154 of file `async.py`.

10.38.2.7 `def rpki.async.timer.handler (self)`

Handle a timer that has expired. This must either be overridden by a subclass or set dynamically by `set_handler()`.

Definition at line 137 of file `async.py`.

10.38.2.8 def rpki.async.timer.is_set (*self*)

Test whether this timer is currently set.

Definition at line 133 of file async.py.

10.38.2.9 def rpki.async.timer.runq (*cls*)

Run the timer queue: for each timer whose call time has passed, pull the timer off the queue and call its handler() method.

Definition at line 166 of file async.py.

10.38.2.10 def rpki.async.timer.seconds_until_wakeup (*cls*)

Calculate delay until next timer expires, or None if no timers are set and we should wait indefinitely. Rounds up to avoid spinning in select() or poll(). We could calculate fractional seconds in the right units instead, but select() and poll() don't even take the same units (argh!), and we're not doing anything that hair-triggered, so rounding up is simplest.

Definition at line 184 of file async.py.

10.38.2.11 def rpki.async.timer.set (*self*, *when*)

Set a timer. Argument can be a datetime, to specify an absolute time, a timedelta, to specify an offset time, or None, to indicate that the timer should expire immediately, which can be useful in avoiding an excessively deep call stack.

Definition at line 103 of file async.py.

10.38.2.12 def rpki.async.timer.set_errback (self, errback)

Set a timer's errback. Like set_handler(), for errbacks.

Definition at line 161 of file async.py.

10.38.2.13 def rpki.async.timer.set_handler (self, handler)

Set timer's expiration handler. This is an alternative to subclassing the timer class, and may be easier to use when integrating timers into other classes (eg, the handler can be a bound method to an object in a class representing a network connection).

Definition at line 144 of file async.py.

10.38.3 Member Data Documentation**10.38.3.1 rpki.async.timer.errback**

Definition at line 163 of file async.py.

10.38.3.2 rpki.async.timer.handler

Definition at line 152 of file async.py.

10.38.3.3 rpki::async.timer::queue = [] [static]

Timer queue, shared by all [timer](#) instances (there can be only one queue).

Definition at line 95 of file async.py.

10.38.3.4 rpki.async.timer.when

Definition at line 111 of file `async.py`.

The documentation for this class was generated from the following file:

10.94 rpki.ipaddrs.v4addr Class Reference

Inherits [long](#).

Public Member Functions

- def [__new__](#)
- def [__str__](#)
- def [from_bytes](#)
- def [to_bytes](#)

Static Public Attributes

- int [bits](#) = 32

10.94.1 Detailed Description

IPv4 address.

Derived from long, but supports IPv4 print syntax.

Definition at line 47 of file ipaddrs.py.

10.94.2 Member Function Documentation

10.94.2.1 def rpki.ipaddrs.v4addr.__new__ (cls, x)

Construct a v4addr object.

Definition at line 56 of file ipaddrs.py.

10.94.2.2 def rpki.ipaddrs.v4addr.__str__ (self)

Convert a v4addr object to string format.

Definition at line 74 of file ipaddrs.py.

10.94.2.3 def rpki.ipaddrs.v4addr.from_bytes (cls, x)

Convert from a raw byte string to a v4addr object.

Definition at line 70 of file ipaddrs.py.

10.94.2.4 def rpki.ipaddrs.v4addr.to_bytes (self)

Convert a v4addr object to a raw byte string.

Definition at line 65 of file ipaddrs.py.

10.94.3 Member Data Documentation

10.94.3.1 int rpki.ipaddrs.v4addr.bits = 32 [static]

Definition at line 54 of file ipaddrs.py.

The documentation for this class was generated from the following file:

- [ipaddrs.py \(2424\)](#)

10.95 rpki.ipaddrs.v6addr Class Reference

Inherits [long](#).

Public Member Functions

- def [__new__](#)
- def [__str__](#)
- def [from_bytes](#)
- def [to_bytes](#)

Static Public Attributes

- int [bits](#) = 128

10.95.1 Detailed Description

IPv6 address.

Derived from long, but supports IPv6 print syntax.

Definition at line 78 of file ipaddrs.py.

10.95.2 Member Function Documentation

10.95.2.1 def rpki.ipaddrs.v6addr.__new__ (cls, x)

Construct a v6addr object.

Definition at line 87 of file ipaddrs.py.

10.95.2.2 def rpki.ipaddrs.v6addr.__str__ (self)

Convert a v6addr object to string format.

Definition at line 104 of file ipaddrs.py.

10.95.2.3 def rpki.ipaddrs.v6addr.from_bytes (cls, x)

Convert from a raw byte string to a v6addr object.

Definition at line 99 of file ipaddrs.py.

10.95.2.4 def rpki.ipaddrs.v6addr.to_bytes (self)

Convert a v6addr object to a raw byte string.

Definition at line 94 of file ipaddrs.py.

10.95.3 Member Data Documentation

10.95.3.1 `int rpki.ipaddrs.v6addr.bits = 128` `[static]`

Definition at line 85 of file `ipaddrs.py`.

Static Public Attributes

- tuple [attributes](#) = ("action", "tag", "self_handle", "child_handle", "bsc_handle")

XML attributes for this element.

- tuple [booleans](#) = ("reissue",)

Boolean attributes (value "yes" or "no") for this element.

- [bpki_cert](#) = None
- [bpki_glue](#) = None
- [clear_https_ta_cache](#) = False
- string [element_name](#) = "child"
- tuple [elements](#) = ("bpki_cert", "bpki_glue")

XML elements contained by this element.

- tuple [handles](#) = (("self", self_elt), ("bsc", bsc_elt))
- tuple [sql_template](#)

10.97.1 Detailed Description

<child/> element.

Definition at line 632 of file left_right.py.

10.97.2 Member Function Documentation

10.97.2.1 `def rpki.left_right.child_elt.ca_from_class_name (self, class_name)`

Fetch the CA corresponding to an up-down class_name.

Definition at line 661 of file left_right.py.

10.97.2.2 `def rpki.left_right.child_elt.child_certs (self, ca_detail = None, ski = None, unique = False)`

Fetch all child_cert objects that link to this child object.

Definition at line 653 of file left_right.py.

10.97.2.3 `def rpki.left_right.child_elt.endElement (self, stack, name, text)`

Handle subelements of <child/> element. These require special handling because modifying them invalidates the HTTPS trust anchor cache.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 685 of file left_right.py.

10.97.2.4 `def rpki.left_right.child_elt.parents (self)`

Fetch all parent objects that link to self object to which this child object links.

Definition at line 657 of file left_right.py.

10.97.2.5 `def rpki.left_right.child_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)`

Extra server actions for `child_elt`.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 675 of file `left_right.py`.

10.97.2.6 `def rpki.left_right.child_elt.serve_up_down (self, query, callback)`

Outer layer of server handling for one up-down PDU from this child.

Definition at line 695 of file `left_right.py`.

10.97.3 Member Data Documentation

10.97.3.1 `tuple rpki.left_right.child_elt.attributes = ("action", "tag", "self_handle", "child_handle", "bsc_handle") [static]`

XML attributes for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 638 of file `left_right.py`.

10.97.3.2 `tuple rpki.left_right.child_elt.booleans = ("reissue",) [static]`

Boolean attributes (value "yes" or "no") for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 640 of file `left_right.py`.

10.97.3.3 `rpki.left_right.child_elt.bpki_cert = None [static]`

Definition at line 649 of file `left_right.py`.

10.97.3.4 `rpki.left_right.child_elt.bpki_glue = None [static]`

Definition at line 650 of file left_right.py.

10.97.3.5 rpki.left_right.child_elt.clear_https_ta_cache = False [static]

Definition at line 651 of file left_right.py.

10.97.3.6 string rpki.left_right.child_elt.element_name = "child" [static]

Definition at line 637 of file left_right.py.

10.97.3.7 tuple rpki.left_right.child_elt.elements = ("bpki_cert", "bpki_glue") [static]

XML elements contained by this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 639 of file left_right.py.

10.97.3.8 tuple rpki.left_right.child_elt.handles = ("self", self_elt), ("bsc", bsc_elt)) [static]

Reimplemented from [rpki.left_right.data_elt](#).

Definition at line 647 of file left_right.py.

10.97.3.9 tuple rpki.left_right.child_elt.sql_template [static]

Initial value:

```
rpki.sql.template("child", "child_id", "child_handle",  
                  "self_id", "bsc_id",  
                  ("bpki_cert", rpki.x509.X509),  
                  ("bpki_glue", rpki.x509.X509))
```

Definition at line 642 of file left_right.py.

10.99.1 Detailed Description

Virtual class for top-level left-right protocol data elements.

Definition at line 51 of file [left_right.py](#).

10.99.2 Member Function Documentation

10.99.2.1 def rpki.left_right.data_elt.bsc (*self*)

Return BSC object to which this object links.

Definition at line 64 of file [left_right.py](#).

10.99.2.2 def rpki.left_right.data_elt.make_reply_clone_hook (self, r_pdu)

Set `self_handle` when cloning.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 68 of file `left_right.py`.

10.99.2.3 def rpki.left_right.data_elt.self (self)

Fetch `self` object to which this object links.

Definition at line 60 of file `left_right.py`.

10.99.2.4 def rpki.left_right.data_elt.serve_fetch_all (self)

Find the objects on which a list method should operate.

Reimplemented in [rpki.left_right.self_elt](#).

Definition at line 88 of file `left_right.py`.

10.99.2.5 def rpki.left_right.data_elt.serve_fetch_handle (cls, gctx, self_id, handle)

Find an object based on its handle.

Reimplemented in [rpki.left_right.self_elt](#).

Definition at line 73 of file `left_right.py`.

10.99.2.6 def rpki.left_right.data_elt.serve_fetch_one_maybe (self)

Find the object on which a `get`, `set`, or `destroy` method should operate, or which would conflict with a `create` method.

Reimplemented in [rpki.left_right.self_elt](#).

Definition at line 79 of file `left_right.py`.

10.99.2.7 `def rpki.left_right.data_elt.serve_pre_save_hook (self, q_pdu, r_pdu, cb, eb)`

Hook to do `_handle => _id` translation before saving.

Reimplemented from [rpki.xml_utils.data_elt](#).

Reimplemented in [rpki.left_right.bsc_elt](#).

Definition at line 95 of file `left_right.py`.

10.99.2.8 `def rpki.left_right.data_elt.unimplemented_control (self, controls)`

Uniform handling for unimplemented control operations.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 111 of file `left_right.py`.

10.99.3 Member Data Documentation

10.99.3.1 `tuple rpki.left_right.data_elt.handles = ()` [static]

Reimplemented in [rpki.left_right.self_elt](#), [rpki.left_right.bsc_elt](#), [rpki.left_right.repository_elt](#), [rpki.left_right.parent_elt](#), [rpki.left_right.child_elt](#), and [rpki.left_right.route_origin_elt](#).

Definition at line 56 of file `left_right.py`.

10.99.3.2 `rpki.left_right.data_elt.self_id = None` [static]

Definition at line 58 of file left_right.py.

10.102 rpki.left_right.msg Class Reference

Inherits [rpki::xml_utils::msg](#), and [rpki::left_right::left_right_namespace](#).

Inherited by [irbe_cli.left_right_msg](#).

Public Member Functions

- def [serve_top_level](#)

Static Public Attributes

- tuple [pdus](#)
Dispatch table of PDUs for this protocol.
- int [version](#) = 1
Protocol version.

10.102.1 Detailed Description

Left-right PDU.

Definition at line 1057 of file left_right.py.

10.102.2 Member Function Documentation

10.102.2.1 def rpki.left_right.msg.serve_top_level (self, gctx, cb)

Serve one msg PDU.

Definition at line 1072 of file left_right.py.

10.102.3 Member Data Documentation

10.102.3.1 rpki::left_right.msg::pdus [static]

Initial value:

```
dict((x.element_name, x)
      for x in (self_elt, child_elt, parent_elt, bsc_elt, repository_elt,
               route_origin_elt, list_resources_elt, report_error_elt))
```

Dispatch table of PDUs for this protocol.

Reimplemented in [irbe_cli.left_right_msg](#).

Definition at line 1068 of file left_right.py.

10.102.3.2 rpki::left_right.msg::version = 1 [static]

Protocol version.

Reimplemented from [rpki.xml_utils.msg](#).

Definition at line 1064 of file left_right.py.

The documentation for this class was generated from the following file:

- [left_right.py \(2493\)](#)

- tuple [sql_template](#)

10.103.1 Detailed Description

<parent/> element.

Definition at line 532 of file left_right.py.

10.103.2 Member Function Documentation

10.103.2.1 def rpki.left_right.parent_elt.cas (self)

Fetch all CA objects that link to this parent object.

Definition at line 559 of file left_right.py.

10.103.2.2 `def rpki.left_right.parent_elt.query_up_down (self, q_pdu, cb, eb)`

Client code for sending one up-down query PDU to this parent.

Definition at line 595 of file left_right.py.

10.103.2.3 `def rpki.left_right.parent_elt.repository (self)`

Fetch repository object to which this parent object links.

Definition at line 555 of file left_right.py.

10.103.2.4 `def rpki.left_right.parent_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)`

Extra server actions for parent_elt.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 563 of file left_right.py.

10.103.2.5 `def rpki.left_right.parent_elt.serve_rekey (self, cb, eb)`

Handle a left-right rekey action for this parent.

Definition at line 575 of file left_right.py.

10.103.2.6 `def rpki.left_right.parent_elt.serve_revoke (self, cb, eb)`

Handle a left-right revoke action for this parent.

Definition at line 585 of file left_right.py.

10.103.3 Member Data Documentation

10.103.3.1 tuple rpki.left_right.parent_elt.attributes [static]

Initial value:

```
("action", "tag", "self_handle", "parent_handle", "bsc_handle", "repository_handle",  
    "peer_contact_uri", "sia_base", "sender_name", "recipient_name")
```

XML attributes for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 538 of file left_right.py.

10.103.3.2 tuple rpki.left_right.parent_elt.booleans = ("rekey", "reissue", "revoke") [static]

Boolean attributes (value "yes" or "no") for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 541 of file left_right.py.

Whether to publish the ROA EE certificate separately from the ROA.

- `roa` = None
- tuple `sql_template`

10.106.1 Detailed Description

<route_origin/> element.

Definition at line 732 of file left_right.py.

10.106.2 Member Function Documentation

10.106.2.1 def rpki.left_right.route_origin_elt.ca_detail (self)

Fetch all `ca_detail` objects that link to this `route_origin` object.

Definition at line 793 of file left_right.py.

10.106.2.2 def rpki.left_right.route_origin_elt.aa_uri (self, ca)

Return the publication URI for this `route_origin`'s ROA's EE certificate.

Definition at line 999 of file left_right.py.

10.106.2.3 def rpki.left_right.route_origin_elt.ee_uri_tail (self)

Return the tail (filename) portion of the URI for this route_origin's ROA's EE certificate.

Definition at line 995 of file left_right.py.

10.106.2.4 def rpki.left_right.route_origin_elt.generate_roa (self, callback, errback)

Generate a ROA based on this <route_origin/> object.

At present this does not support ROAs with multiple signatures (neither does the current CMS code).

At present we have no way of performing a direct lookup from a desired set of resources to a covering certificate, so we have to search. This could be quite slow if we have a lot of active ca_detail objects. Punt on the issue for now, revisit if profiling shows this as a hotspot.

Once we have the right covering certificate, we generate the ROA payload, generate a new EE certificate, use the EE certificate to sign the ROA payload, publish the result, then throw away the private key for the EE cert, all per the ROA specification. This implies that generating a lot of ROAs will tend to thrash /dev/random, but there is not much we can do about that.

Definition at line 861 of file left_right.py.

10.106.2.5 def rpki.left_right.route_origin_elt.regenerate_roa (self, callback, errback)

Reissue ROA associated with this route_origin.

Definition at line 978 of file left_right.py.

10.106.2.6 def rpki.left_right.route_origin_elt.roa_uri (self, ca, key = None)

Return the publication URI for this route_origin's ROA.

Definition at line 987 of file left_right.py.

10.106.2.7 `def rpki.left_right.route_origin_elt.roa_uri_tail (self, key = None)`

Return the tail (filename portion) of the publication URI for this route_origin's ROA.

Definition at line 991 of file left_right.py.

10.106.2.8 `def rpki.left_right.route_origin_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)`

Extra server actions for route_origin_elt.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 797 of file left_right.py.

10.106.2.9 `def rpki.left_right.route_origin_elt.sql_delete_hook (self)`

Extra SQL delete actions for route_origin_elt -- handle address ranges.

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 786 of file left_right.py.

10.106.2.10 `def rpki.left_right.route_origin_elt.sql_fetch_hook (self)`

Extra SQL fetch actions for route_origin_elt -- handle prefix list.

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 755 of file left_right.py.

10.106.2.11 `def rpki.left_right.route_origin_elt.sql_insert_hook (self)`

Extra SQL insert actions for route_origin_elt -- handle address ranges.

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 772 of file left_right.py.

10.106.2.12 **def rpki.left_right.route_origin_elt.startElement (self, stack, name, attrs)**

Handle <route_origin/> element. This requires special processing due to the data types of some of the attributes.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 804 of file left_right.py.

10.106.2.13 **def rpki.left_right.route_origin_elt.update_roa (self, callback)**

Bring this route_origin's ROA up to date if necessary.

Definition at line 818 of file left_right.py.

10.106.2.14 **def rpki.left_right.route_origin_elt.withdraw_roa (self, callback, errback, regenerate = False)**

Withdraw ROA associated with this route_origin.

In order to preserve make-before-break properties without duplicating code, this method also handles generating a replacement ROA when requested.

Definition at line 936 of file left_right.py.

10.106.3 Member Data Documentation

10.106.3.1 **rpki.left_right.route_origin_elt.as_number**

Reimplemented in [irbe_cli.route_origin_elt](#).

Definition at line 812 of file left_right.py.

```
10.106.3.2 tuple rpki.left_right.route_origin_elt.attributes = ("action", "tag",  
    "self_handle", "route_origin_handle", "as_number", "ipv4",  
    "ipv6") [static]
```

XML attributes for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 738 of file left_right.py.

```
10.106.3.3 tuple rpki.left_right.route_origin_elt.booleans =  
    ("suppress_publication",) [static]
```

Boolean attributes (value "yes" or "no") for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 739 of file left_right.py.

```
10.106.3.4 rpki.left_right.route_origin_elt.ca_detail_id = None [static]
```

Definition at line 747 of file left_right.py.

```
10.106.3.5 rpki.left_right.route_origin_elt.cert = None [static]
```

Definition at line 748 of file left_right.py.

```
10.106.3.6 string rpki.left_right.route_origin_elt.element_name =  
    "route_origin" [static]
```

Definition at line 737 of file left_right.py.

10.106.3.7 `tuple rpki.left_right.route_origin_elt.handles = (('self', self_elt),)`
[static]

Reimplemented from [rpki.left_right.data_elt](#).

Definition at line 745 of file left_right.py.

10.106.3.8 `rpki.left_right.route_origin_elt.ipv4`

Reimplemented in [irbe_cli.route_origin_elt](#).

Definition at line 759 of file left_right.py.

10.106.3.9 `rpki.left_right.route_origin_elt.ipv6`

Reimplemented in [irbe_cli.route_origin_elt](#).

Definition at line 765 of file left_right.py.

10.106.3.10 `rpki::left_right.route_origin_elt::publish_ee_separately = False`
[static]

Whether to publish the ROA EE certificate separately from the ROA.

Definition at line 753 of file left_right.py.

10.106.3.11 `rpki.left_right.route_origin_elt.roa = None` [static]

Definition at line 749 of file left_right.py.

10.106.3.12 `tuple rpki.left_right.route_origin_elt.sql_template` [static]

Initial value:

```
rpki.sql.template("route_origin", "route_origin_id", "route_origin_handle",
```

```
"ca_detail_id", "self_id", "as_number",  
("roa", rpki.x509.ROA),

10.108.1 Detailed Description

`<self/> element.`

Definition at line 119 of file `left_right.py`.

10.108.2 Member Function Documentation

10.108.2.1 `def rpki.left_right.self_elt.bscs (self)`

Fetch all BSC objects that link to this self object.

Definition at line 140 of file `left_right.py`.

10.108.2.2 `def rpki.left_right.self_elt.children (self)`

Fetch all child objects that link to this self object.

Definition at line 152 of file `left_right.py`.

10.108.2.3 `def rpki.left_right.self_elt.client_poll (self, callback)`

Run the regular client poll cycle with each of this self's parents in turn.

Definition at line 217 of file `left_right.py`.

10.108.2.4 def rpki.left_right.self_elt.parents (*self*)

Fetch all parent objects that link to this self object.

Definition at line 148 of file left_right.py.

10.108.2.5 def rpki.left_right.self_elt.regenerate_crls_and_manifests (*self*, *cb*)

Generate new CRLs and manifests as necessary for all of this self's CAs. Extracting nextUpdate from a manifest is hard at the moment due to implementation silliness, so for now we generate a new manifest whenever we generate a new CRL

This method also cleans up tombstones left behind by revoked ca_detail objects, since we're walking through the relevant portions of the database anyway.

Definition at line 352 of file left_right.py.

10.108.2.6 def rpki.left_right.self_elt.repositories (*self*)

Fetch all repository objects that link to this self object.

Definition at line 144 of file left_right.py.

10.108.2.7 def rpki.left_right.self_elt.route_origins (*self*)

Fetch all route_origin objects that link to this self object.

Definition at line 156 of file left_right.py.

10.108.2.8 def rpki.left_right.self_elt.serve_fetch_all (*self*)

Find the self objects upon which a list action should operate. This is different from the list action for all other objects, where list only works within a given self_id context.

Reimplemented from [rpki.left_right.data_elt](#).

Definition at line 209 of file left_right.py.

10.108.2.9 `def rpki.left_right.self_elt.serve_fetch_handle (cls, gctx, self_id, self_handle)`

Find a self object based on its self_handle.

Reimplemented from [rpki.left_right.data_elt](#).

Definition at line 203 of file left_right.py.

10.108.2.10 `def rpki.left_right.self_elt.serve_fetch_one_maybe (self)`

Find the self object upon which a get, set, or destroy action should operate, or which would conflict with a create method.

Reimplemented from [rpki.left_right.data_elt](#).

Definition at line 195 of file left_right.py.

10.108.2.11 `def rpki.left_right.self_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)`

Extra server actions for self_elt.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 160 of file left_right.py.

10.108.2.12 `def rpki.left_right.self_elt.serve_rekey (self, cb, eb)`

Handle a left-right rekey action for this self.

Definition at line 173 of file left_right.py.

10.108.2.13 def rpki.left_right.self_elt.serve_revoke (self, cb, eb)

Handle a left-right revoke action for this self.

Definition at line 184 of file left_right.py.

10.108.2.14 def rpki.left_right.self_elt.update_children (self, cb)

Check for updated IRDB data for all of this self's children and issue new certs as necessary. Must handle changes both in resources and in expiration date.

Definition at line 270 of file left_right.py.

10.108.2.15 def rpki.left_right.self_elt.update_roas (self, cb)

Generate or update ROAs for this self's route_origin objects.

Definition at line 403 of file left_right.py.

10.108.3 Member Data Documentation

10.108.3.1 tuple rpki.left_right.self_elt.attributes = ("action", "tag", "self_handle", "crl_interval", "regen_margin") [static]

XML attributes for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 125 of file left_right.py.

10.108.3.2 `tuple rpki.left_right.self_elt.booleans = ("rekey", "reissue", "revoke", "run_now", "publish_world_now") [static]`

10.114.1 Detailed Description

<client/> element.

Definition at line 113 of file publication.py.

10.114.2 Member Function Documentation

10.114.2.1 def rpki.publication.client_elt.check_allowed_uri (self, uri)

Definition at line 160 of file publication.py.

10.114.2.2 def rpki.publication.client_elt.endElement (self, stack, name, text)

Handle subelements of <client/> element. These require special handling because modifying them invalidates the HTTPS trust anchor cache.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 130 of file publication.py.

10.114.2.3 def rpki.publication.client_elt.serve_fetch_all (self)

Find client objects on which a list method should operate.

Definition at line 156 of file publication.py.

10.114.2.4 def rpki.publication.client_elt.serve_fetch_one_maybe (self)

Find the client object on which a get, set, or destroy method should operate, or which would conflict with a create method.

Definition at line 149 of file publication.py.

10.114.2.5 def rpki.publication.client_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)

Extra server actions for client_elt.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 140 of file publication.py.

10.114.3 Member Data Documentation

10.114.3.1 `tuple rpki.publication.client_elt.attributes = ("action", "tag", "client_handle", "base_uri") [static]`

10.116 rpki.publication.config_elt Class Reference

Inherits [rpki::publication::control_elt](#).

Inherited by [irbe_cli.config_elt](#).

Public Member Functions

- def [fetch](#)
- def [serve_fetch_one_maybe](#)
- def [serve_set](#)
- def [startElement](#)

Public Attributes

- [config_id](#)

Static Public Attributes

- tuple `attributes` = ("action", "tag")
XML attributes for this element.
- string `element_name` = "config"
- tuple `elements` = ("bpki_crl",)
XML elements contained by this element.
- tuple `sql_template` = `rpki.sql.template("config", "config_id", ("bpki_crl", rpki.x509.CRL))`
- int `wired_in_config_id` = 1

10.116.1 Detailed Description

`<config/>` element. This is a little weird because there should never be more than one row in the SQL config table, but we have to put the BPKI CRL somewhere and SQL is the least bad place available.

So we reuse a lot of the SQL machinery, but we nail `config_id` at 1, we don't expose it in the XML protocol, and we only support the get and set actions.

Definition at line 61 of file `publication.py`.

10.116.2 Member Function Documentation

10.116.2.1 `def rpki.publication.config_elt.fetch (cls, gctx)`

Fetch the config object from SQL. This requires special handling because of the weird way we treat `config_id`.

Definition at line 89 of file `publication.py`.

10.116.2.2 `def rpki.publication.config_elt.serve_fetch_one_maybe (self)`

Find the config object on which a get or set method should operate.

Definition at line 106 of file `publication.py`.

10.116.2.3 `def rpki.publication.config_elt.serve_set (self, r_msg, cb, eb)`

Handle a set action. This requires special handling because config doesn't support the create method.

Reimplemented from [rpki.xml_utils.data_elt](#).

Definition at line 96 of file publication.py.

10.116.2.4 `def rpki.publication.config_elt.startElement (self, stack, name, attrs)`

StartElement() handler for config object. This requires special handling because of the weird way we treat config_id.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 80 of file publication.py.

10.116.3 Member Data Documentation**10.116.3.1** `tuple rpki.publication.config_elt.attributes = ("action", "tag")`
`[static]`

XML attributes for this element.

Reimplemented from [rpki.xml_utils.base_elt](#).

XML attributes for this element.
- [payload](#) = None

10.122.1 Detailed Description

Virtual class for publishable objects. These have very similar syntax, differences lie in underlying datatype and methods. XML methods are a little different from the pattern used for objects that support the create/set/get/list/destroy actions, but publishable objects don't go in SQL either so these classes would be different in any case.

Definition at line 164 of file publication.py.

10.122.2 Member Function Documentation

10.122.2.1 **def rpki.publication.publication_object_elt.endElement (*self*, *stack*, *name*, *text*)**

Handle a publishable element element.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 177 of file publication.py.

10.122.2.2 **def rpki.publication.publication_object_elt.serve_dispatch (*self*, *r_msg*, *cb*, *eb*)**

Action dispatch handler.

Definition at line 195 of file publication.py.

10.122.2.3 **def rpki.publication.publication_object_elt.serve_publish (*self*)**

Publish an object.

Definition at line 214 of file publication.py.

10.122.2.4 **def rpki.publication.publication_object_elt.serve_withdraw (*self*)**

Withdraw an object.

Definition at line 227 of file publication.py.

10.122.2.5 **def rpki.publication.publication_object_elt.toXML (*self*)**

Generate XML element for publishable object.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 186 of file `publication.py`.

10.122.2.6 `def rpki.publication.publication_object_elt.uri_to_filename (self)`

Convert a URI to a local filename.

Definition at line 234 of file `publication.py`.

Type of underlying data (min and max).

10.128.1 Detailed Description

Range of Autonomous System Numbers.

Denotes a single ASN by a range whose min and max values are identical.

Definition at line 78 of file resource_set.py.

10.128.2 Member Function Documentation

10.128.2.1 `def rpki.resource_set.resource_range_as.__str__ (self)`

Convert a resource_range_as to string format.

Definition at line 91 of file resource_set.py.

10.128.2.2 `def rpki.resource_set.resource_range_as.to_rfc3779_tuple (self)`

Convert a `resource_range_as` to tuple format for RFC 3779 ASN.1 encoding.

Definition at line 100 of file `resource_set.py`.

10.128.3 Member Data Documentation

10.128.3.1 `rpki::resource_set.resource_range_as::datum_type = long` [static]

Type of underlying data (min and max).

Definition at line 89 of file `resource_set.py`.

10.128.3.2 `rpki.resource_set.resource_range_as.min`

Reimplemented from [rpki.resource_set.resource_range](#).

Definition at line 95 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.129 rpki.resource_set.resource_range_ip Class Reference

Inherits [rpki::resource_set::resource_range](#).

Inherited by [rpki.resource_set.resource_range_ipv4](#), and [rpki.resource_set.resource_range_ipv6](#).

Public Member Functions

- def [__str__](#)
- def [make_prefix](#)
- def [to_rfc3779_tuple](#)

Private Member Functions

- def [_prefixlen](#)

10.129.1 Detailed Description

Range of (generic) IP addresses.

Prefixes are converted to ranges on input, and ranges that can be represented as prefixes are written as prefixes on output.

This is a virtual class. You probably don't want to use it directly.

Definition at line 109 of file resource_set.py.

10.129.2 Member Function Documentation

10.129.2.1 def rpki.resource_set.resource_range_ip.__str__ (self)

Convert a resource_range_ip to string format.

Definition at line 137 of file resource_set.py.

10.129.2.2 def rpki.resource_set.resource_range_ip._prefixlen (self) [private]

Determine whether a resource_range_ip can be expressed as a prefix.

Definition at line 120 of file resource_set.py.

10.129.2.3 def rpki.resource_set.resource_range_ip.make_prefix (cls, address, prefixlen)

Construct a resource range corresponding to a prefix.

Definition at line 160 of file resource_set.py.

10.129.2.4 def rpki.resource_set.resource_range_ip.to_rfc3779_tuple (self)

Convert a resource_range_ip to tuple format for RFC 3779 ASN.1 encoding.

Definition at line 147 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.130 rpki.resource_set.resource_range_ipv4 Class Reference

Inherits [rpki::resource_set::resource_range_ip](#).

Static Public Attributes

- [datum_type = rpki.ipaddrs.v4addr](#)
Type of underlying data (min and max).

10.130.1 Detailed Description

Range of IPv4 addresses.

Definition at line 170 of file resource_set.py.

10.130.2 Member Data Documentation

10.130.2.1 rpki::resource_set.resource_range_ipv4::datum_type = rpki.ipaddrs.v4addr [static]

Type of underlying data (min and max).

Definition at line 178 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.131 `rpki.resource_set.resource_range_ipv6` Class Reference

Inherits [rpki::resource_set::resource_range_ip](#).

Static Public Attributes

- `datum_type = rpki.ipaddrs.v6addr`
Type of underlying data (min and max).

10.131.1 Detailed Description

Range of IPv6 addresses.

Definition at line 180 of file `resource_set.py`.

10.131.2 Member Data Documentation

10.131.2.1 `rpki::resource_set.resource_range_ipv6::datum_type = rpki.ipaddrs.v6addr` [static]

Type of underlying data (min and max).

Definition at line 188 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.132 `rpki.resource_set.resource_set` Class Reference

Inherits `list`.

Inherited by [rpki.resource_set.resource_set_as](#), and [rpki.resource_set.resource_set_ip](#).

Public Member Functions

- `def __init__`
- `def __str__`
- `def contains`
- `def difference`
- `def from_sql`

- def [intersection](#)
- def [issubset](#)
- def [issuperset](#)
- def [symmetric_difference](#)
- def [union](#)

Static Public Attributes

- [inherit](#) = False
Boolean indicating whether this [resource_set](#) uses RFC 3779 inheritance.

Private Member Functions

- def [_comm](#)

10.132.1 Detailed Description

Generic resource set, a list subclass containing resource ranges.

This is a virtual class. You probably don't want to use it directly.

Definition at line 206 of file resource_set.py.

10.132.2 Member Function Documentation

10.132.2.1 def rpki.resource_set.resource_set.__init__ (self, ini = None)

Initialize a resource_set.

Definition at line 219 of file resource_set.py.

10.132.2.2 def rpki.resource_set.resource_set.__str__ (self)

Convert a resource_set to string format.

Definition at line 246 of file resource_set.py.

10.132.2.3 `def rpki.resource_set.resource_set.comm (self, other)` `[private]`

Like `comm(1)`, sort of.

Returns a tuple of three resource sets: resources only in `self`, resources only in `other`, and resources in both. Used (not very efficiently) as the basis for most set operations on resource sets.

Definition at line 255 of file `resource_set.py`.

10.132.2.4 `def rpki.resource_set.resource_set.contains (self, item)`

Set membership test for resource sets.

Definition at line 326 of file `resource_set.py`.

10.132.2.5 `def rpki.resource_set.resource_set.difference (self, other)`

Set difference for resource sets.

Definition at line 317 of file `resource_set.py`.

10.132.2.6 `def rpki.resource_set.resource_set.from_sql (cls, sql, query, args = None)`

Create resource set from an SQL query.

`sql` is an object that supports `execute()` and `fetchall()` methods like a DB API 2.0 cursor object.

`query` is an SQL query that returns a sequence of (min, max) pairs.

Definition at line 354 of file `resource_set.py`.

10.132.2.7 def rpki.resource_set.resource_set.intersection (*self*, *other*)

Set intersection for resource sets.

Definition at line 313 of file resource_set.py.

10.132.2.8 def rpki.resource_set.resource_set.issubset (*self*, *other*)

Test whether self is a subset (possibly improper) of other.

Definition at line 340 of file resource_set.py.

10.132.2.9 def rpki.resource_set.resource_set.issuperset (*self*, *other*)

Test whether self is a superset (possibly improper) of other.

Definition at line 349 of file resource_set.py.

**10.132.2.10 def rpki.resource_set.resource_set.symmetric_difference (*self*,
other)**

Set symmetric difference (XOR) for resource sets.

Definition at line 321 of file resource_set.py.

10.132.2.11 def rpki.resource_set.resource_set.union (*self*, *other*)

Set union for resource sets.

Definition at line 288 of file resource_set.py.

10.132.3 Member Data Documentation

10.132.3.1 `rpki::resource_set.resource_set::inherit = False` [static]

Boolean indicating whether this `resource_set` uses RFC 3779 inheritance.

Reimplemented in `rpki.resource_set.resource_set_as`, and `rpki.resource_set.resource_set_ip`.

Definition at line 217 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- `resource_set.py` (2457)

10.133 `rpki.resource_set.resource_set_as` Class Reference

Inherits `rpki::resource_set::resource_set`.

Public Member Functions

- def `parse_rfc3779_tuple`
- def `parse_str`
- def `to_rfc3779_tuple`

Public Attributes

- `inherit`

Boolean indicating whether this `resource_set` uses RFC 3779 inheritance.

Static Public Attributes

- `range_type = resource_range_as`

Type of range underlying this type of `resource_set`.

10.133.1 Detailed Description

Autonomous System Number resource set.

Definition at line 369 of file `resource_set.py`.

10.133.2 Member Function Documentation

10.133.2.1 `def rpki.resource_set.resource_set_as.parse_rfc3779_tuple (self, x)`

Parse ASN resource from tuple format generated by RFC 3779 ASN.1 decoder.

Definition at line 389 of file resource_set.py.

10.133.2.2 `def rpki.resource_set.resource_set_as.parse_str (self, x)`

Parse ASN resource sets from text (eg, XML attributes).

Definition at line 379 of file resource_set.py.

10.133.2.3 `def rpki.resource_set.resource_set_as.to_rfc3779_tuple (self)`

Convert ASN resource set into tuple format used for RFC 3779 ASN.1 encoding.

Definition at line 407 of file resource_set.py.

10.133.3 Member Data Documentation

10.133.3.1 `rpki.resource_set.resource_set_as.inherit`

Boolean indicating whether this [resource_set](#) uses RFC 3779 inheritance.

Reimplemented from [rpki.resource_set.resource_set](#).

Definition at line 405 of file resource_set.py.

10.133.3.2 `rpki::resource_set.resource_set_as::range_type = resource_range_as [static]`

Type of range underlying this type of [resource_set](#).

Definition at line 377 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py](#) (2457)

10.134 rpki.resource_set.resource_set_ip Class Reference

Inherits [rpki::resource_set::resource_set](#).

Inherited by [rpki.resource_set.resource_set_ipv4](#), and [rpki.resource_set.resource_set_ipv6](#).

Public Member Functions

- def [parse_rfc3779_tuple](#)
- def [parse_str](#)
- def [to_rfc3779_tuple](#)

Public Attributes

- [inherit](#)
Boolean indicating whether this [resource_set](#) uses RFC 3779 inheritance.

10.134.1 Detailed Description

(Generic) IP address resource set.

This is a virtual class. You probably don't want to use it directly.

Definition at line 419 of file resource_set.py.

10.134.2 Member Function Documentation

10.134.2.1 def rpki.resource_set.resource_set_ip.parse_rfc3779_tuple (self, x)

Parse IP address resource sets from tuple format generated by RFC 3779 ASN.1 decoder.

Definition at line 439 of file resource_set.py.

10.134.2.2 `def rpki.resource_set.resource_set_ip.parse_str (self, x)`

Parse IP address resource sets from text (eg, XML attributes).

Definition at line 427 of file `resource_set.py`.

10.134.2.3 `def rpki.resource_set.resource_set_ip.to_rfc3779_tuple (self)`

Convert IP resource set into tuple format used by RFC 3779 ASN.1 encoder.

Definition at line 457 of file `resource_set.py`.

10.134.3 Member Data Documentation

10.134.3.1 `rpki.resource_set.resource_set_ip.inherit`

Boolean indicating whether this `resource_set` uses RFC 3779 inheritance.

Reimplemented from `rpki.resource_set.resource_set`.

Definition at line 455 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- `resource_set.py` (2457)

10.135 `rpki.resource_set.resource_set_ipv4` Class Reference

Inherits `rpki::resource_set::resource_set_ip`.

Static Public Attributes

- string `afi` = `"\x00\x01"`
Address Family Identifier value for IPv4.
- `range_type` = `resource_range_ipv4`
Type of range underlying this type of `resource_set`.

10.135.1 Detailed Description

IPv4 address resource set.

Definition at line 469 of file resource_set.py.

10.135.2 Member Data Documentation

10.135.2.1 rpki::resource_set.resource_set_ipv4::afi = "\x00\x01" [static]

Address Family Identifier value for IPv4.

Definition at line 482 of file resource_set.py.

10.135.2.2 rpki::resource_set.resource_set_ipv4::range_type = resource_range_ipv4 [static]

Type of range underlying this type of [resource_set](#).

Definition at line 477 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.136 rpki.resource_set.resource_set_ipv6 Class Reference

Inherits [rpki::resource_set::resource_set_ip](#).

Static Public Attributes

- string [afi](#) = "\x00\x02"
Address Family Identifier value for IPv6.
- [range_type](#) = [resource_range_ipv6](#)
Type of range underlying this type of [resource_set](#).

10.136.1 Detailed Description

IPv6 address resource set.

Definition at line 484 of file resource_set.py.

10.136.2 Member Data Documentation

10.136.2.1 rpki::resource_set.resource_set_ipv6::afi = "\x00\x02" [static]

Address Family Identifier value for IPv6.

Definition at line 497 of file resource_set.py.

10.136.2.2 rpki::resource_set.resource_set_ipv6::range_type = resource_range_ipv6 [static]

Type of range underlying this type of [resource_set](#).

Definition at line 492 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.137 rpki.resource_set.roa_prefix Class Reference

Inherits [object](#).

Inherited by [rpki.resource_set.roa_prefix_ipv4](#), and [rpki.resource_set.roa_prefix_ipv6](#).

Public Member Functions

- def [__cmp__](#)
- def [__init__](#)
- def [__str__](#)
- def [max](#)
- def [min](#)
- def [to_resource_range](#)
- def [to_roa_tuple](#)

Public Attributes

- [address](#)
Address portion of prefix.
- [max_prefixlen](#)
Maximum prefix length.
- [prefixlen](#)
(Minimum) prefix length.

10.137.1 Detailed Description

ROA prefix. This is similar to the `resource_range_ip` class, but differs in that it only represents prefixes, never ranges, and includes the maximum prefix length as an additional value.

This is a virtual class, you probably don't want to use it directly.

Definition at line 651 of file `resource_set.py`.

10.137.2 Member Function Documentation

10.137.2.1 `def rpki.resource_set.roa_prefix.__cmp__(self, other)`

Compare two ROA prefix objects. Comparison is based on address, prefixlen, and max_prefixlen, in that order.

Definition at line 681 of file `resource_set.py`.

10.137.2.2 `def rpki.resource_set.roa_prefix.__init__(self, address, prefixlen, max_prefixlen = None)`

Initialize a ROA prefix. `max_prefixlen` is optional and defaults to `prefixlen`. `max_prefixlen` must not be smaller than `prefixlen`.

Definition at line 669 of file `resource_set.py`.

10.137.2.3 def rpki.resource_set.roa_prefix.__str__ (self)

Convert a ROA prefix to string format.

Definition at line 694 of file resource_set.py.

10.137.2.4 def rpki.resource_set.roa_prefix.max (self)

Return highest address covered by prefix.

Definition at line 715 of file resource_set.py.

10.137.2.5 def rpki.resource_set.roa_prefix.min (self)

Return lowest address covered by prefix.

Definition at line 711 of file resource_set.py.

10.137.2.6 def rpki.resource_set.roa_prefix.to_resource_range (self)

Convert this ROA prefix to the equivalent resource_range_ip object. This is an irreversable transformation because it loses the max_prefixlen attribute, nothing we can do about that.

Definition at line 703 of file resource_set.py.

10.137.2.7 def rpki.resource_set.roa_prefix.to_roa_tuple (self)

Convert a resource_range_ip to tuple format for ROA ASN.1 encoding.

Definition at line 722 of file resource_set.py.

10.137.3 Member Data Documentation

10.137.3.1 rpki::resource_set.roa_prefix::address

Address portion of prefix.

Definition at line 677 of file resource_set.py.

10.137.3.2 rpki::resource_set.roa_prefix::max_prefixlen

Maximum prefix length.

Definition at line 679 of file resource_set.py.

10.137.3.3 rpki::resource_set.roa_prefix::prefixlen

(Minimum) prefix length.

Definition at line 678 of file resource_set.py.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.138 rpki.resource_set.roa_prefix_ipv4 Class Reference

Inherits [rpki::resource_set::roa_prefix](#).

Static Public Attributes

- [range_type = resource_range_ipv4](#)
Type of corresponding [resource_range_ip](#).

10.138.1 Detailed Description

IPv4 ROA prefix.

Definition at line 730 of file resource_set.py.

10.138.2 Member Data Documentation

10.138.2.1 `rpki::resource_set.roa_prefix_ipv4::range_type = resource_range_ipv4` `[static]`

Type of corresponding [resource_range_ip](#).

Definition at line 738 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- [resource_set.py](#) (2457)

10.139 rpki.resource_set.roa_prefix_ipv6 Class Reference

Inherits [rpki::resource_set::roa_prefix](#).

Static Public Attributes

- `range_type = resource_range_ipv6`
Type of corresponding [resource_range_ip](#).

10.139.1 Detailed Description

IPv6 ROA prefix.

Definition at line 740 of file `resource_set.py`.

10.139.2 Member Data Documentation

10.139.2.1 `rpki::resource_set.roa_prefix_ipv6::range_type = resource_range_ipv6` `[static]`

Type of corresponding [resource_range_ip](#).

Definition at line 748 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- [resource_set.py](#) (2457)

10.140 rpki.resource_set.roa_prefix_set Class Reference

Inherits list.

Inherited by [rpki.resource_set.roa_prefix_set_ipv4](#), and [rpki.resource_set.roa_prefix_set_ipv6](#).

Public Member Functions

- [def __init__](#)
- [def __str__](#)
- [def from_sql](#)
- [def parse_str](#)
- [def to_resource_set](#)
- [def to_roa_tuple](#)

10.140.1 Detailed Description

Set of ROA prefixes, analogous to the `resource_set_ip` class.

Definition at line 750 of file `resource_set.py`.

10.140.2 Member Function Documentation

10.140.2.1 `def rpki.resource_set.roa_prefix_set.__init__ (self, ini = None)`

Initialize a ROA prefix set.

Definition at line 755 of file `resource_set.py`.

10.140.2.2 `def rpki.resource_set.roa_prefix_set.__str__ (self)`

Convert a ROA prefix set to string format.

Definition at line 775 of file `resource_set.py`.

10.140.2.3 `def rpki.resource_set.roa_prefix_set.from_sql (cls, sql, query, args = None)`

Create ROA prefix set from an SQL query.

sql is an object that supports `execute()` and `fetchall()` methods like a DB API 2.0 cursor object.

query is an SQL query that returns a sequence of (address, prefixlen, max_prefixlen) triples.

Definition at line 809 of file `resource_set.py`.

10.140.2.4 `def rpki.resource_set.roa_prefix_set.parse_str (self, x)`

Parse ROA prefix from text (eg, an XML attribute).

Definition at line 779 of file `resource_set.py`.

10.140.2.5 `def rpki.resource_set.roa_prefix_set.to_resource_set (self)`

Convert a ROA prefix set to a resource set. This is an irreversable transformation. We have to compute a union here because ROA prefix sets can include overlaps, while RFC 3779 resource sets cannot. This is ugly, and there is almost certainly a more efficient way to do this, but start by getting the output right before worrying about making it fast or pretty.

Definition at line 791 of file `resource_set.py`.

10.140.2.6 `def rpki.resource_set.roa_prefix_set.to_roa_tuple (self)`

Convert ROA prefix set into tuple format used by ROA ASN.1 encoder. This is a variation on the format used in RFC 3779.

Definition at line 824 of file `resource_set.py`.

The documentation for this class was generated from the following file:

- [resource_set.py \(2457\)](#)

10.141 rpki.resource_set.roa_prefix_set_ipv4 Class Reference

Inherits [rpki::resource_set::roa_prefix_set](#).

Static Public Attributes

- [prefix_type](#) = [roa_prefix_ipv4](#)
Type of underlying [roa_prefix](#).
- [resource_set_type](#) = [resource_set_ipv4](#)
Type of corresponding [resource_set_ip](#) class.

10.141.1 Detailed Description

Set of IPv4 ROA prefixes.

Definition at line 834 of file [resource_set.py](#).

10.141.2 Member Data Documentation

10.141.2.1 [rpki::resource_set.roa_prefix_set_ipv4::prefix_type](#) = [roa_prefix_ipv4](#) [static]

Type of underlying [roa_prefix](#).

Definition at line 842 of file [resource_set.py](#).

10.141.2.2 [rpki::resource_set.roa_prefix_set_ipv4::resource_set_type](#) = [resource_set_ipv4](#) [static]

Type of corresponding [resource_set_ip](#) class.

Definition at line 847 of file [resource_set.py](#).

The documentation for this class was generated from the following file:

10.148.1 Detailed Description

Internal CA detail object.

Definition at line 445 of file rpki_engine.py.

10.148.2 Member Function Documentation

10.148.2.1 `def rpki.rpki_engine.ca_detail_obj.activate (self, ca, cert, uri, callback, errback, predecessor = None)`

Activate this ca_detail.

Definition at line 503 of file rpki_engine.py.

10.148.2.2 `def rpki.rpki_engine.ca_detail_obj.ca (self)`

Fetch CA object to which this ca_detail links.

Definition at line 475 of file rpki_engine.py.

10.148.2.3 `def rpki.rpki_engine.ca_detail_obj.child_certs (self, child = None, ski = None, unique = False)`

Fetch all child_cert objects that link to this ca_detail.

Definition at line 479 of file rpki_engine.py.

10.148.2.4 `def rpki.rpki_engine.ca_detail_obj.create (cls, ca)`

Create a new ca_detail object for a specified CA.

Definition at line 657 of file rpki_engine.py.

10.148.2.5 `def rpki.rpki_engine.ca_detail_obj.crl_uri (self, ca)`

Return publication URI for this ca_detail's CRL.

Definition at line 491 of file rpki_engine.py.

10.148.2.6 `def rpki.rpki_engine.ca_detail_obj.crl_uri_tail (self)`

Return tail (filename portion) of publication URI for this ca_detail's CRL.

Definition at line 495 of file rpki_engine.py.

10.148.2.7 `def rpki.rpki_engine.ca_detail_obj.delete (self, ca, repository, cb, eb)`

Delete this ca_detail and all of the certs it issued.

Definition at line 536 of file rpki_engine.py.

10.148.2.8 `def rpki.rpki_engine.ca_detail_obj.generate_crl (self, callback, errback, nextUpdate = None)`

Generate a new CRL for this ca_detail. At the moment this is unconditional, that is, it is up to the caller to decide whether a new CRL is needed.

Definition at line 748 of file rpki_engine.py.

10.148.2.9 `def rpki.rpki_engine.ca_detail_obj.generate_manifest (self, callback, errback, nextUpdate = None)`

Generate a new manifest for this ca_detail.

Definition at line 782 of file rpki_engine.py.

10.148.2.10 `def rpki.rpki_engine.ca_detail_obj.generate_manifest_cert (self, ca)`

Generate a new manifest certificate for this ca_detail.

Definition at line 692 of file rpki_engine.py.

10.148.2.11 `def rpki.rpki_engine.ca_detail_obj.issue (self, ca, child, subject_key, sia, resources, callback, errback, child_cert = None)`

Issue a new certificate to a child. Optional `child_cert` argument specifies an existing `child_cert` object to update in place; if not specified, we create a new one. Returns the `child_cert` object containing the newly issued cert.

Definition at line 704 of file `rpki_engine.py`.

10.148.2.12 `def rpki.rpki_engine.ca_detail_obj.issue_ee (self, ca, resources, subject_key, sia = None)`

Issue a new EE certificate.

Definition at line 675 of file `rpki_engine.py`.

10.148.2.13 `def rpki.rpki_engine.ca_detail_obj.manifest_uri (self, ca)`

Return publication URI for this `ca_detail`'s manifest.

Definition at line 499 of file `rpki_engine.py`.

10.148.2.14 `def rpki.rpki_engine.ca_detail_obj.revoke (self, cb, eb)`

Request revocation of all certificates whose SKI matches the key for this `ca_detail`.

Tasks:

- Request revocation of old keypair by parent.
- Revoke all child certs issued by the old keypair.
- Generate a final CRL, signed with the old keypair, listing all the revoked certs, with a next CRL time after the last cert or CRL signed by the old keypair will have expired.

- Generate a corresponding final manifest.
- Destroy old keypairs.
- Leave final CRL and manifest in place until their nextupdate time has passed.

Definition at line 564 of file rpki_engine.py.

10.148.2.15 def rpki.rpki_engine.ca_detail_obj.revoked_certs (self)

Fetch all revoked_cert objects that link to this ca_detail.

Definition at line 483 of file rpki_engine.py.

10.148.2.16 def rpki.rpki_engine.ca_detail_obj.route_origins (self)

Fetch all route_origin objects that link to this ca_detail.

Definition at line 487 of file rpki_engine.py.

10.148.2.17 def rpki.rpki_engine.ca_detail_obj.sql_decode (self, vals)

Extra assertions for SQL decode of a ca_detail_obj.

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 465 of file rpki_engine.py.

10.148.2.18 def rpki.rpki_engine.ca_detail_obj.update (self, parent, ca, rc, sia_uri_changed, old_resources, callback, errback)

Need to get a new certificate for this ca_detail and perhaps frob children of this ca_detail.

Definition at line 628 of file rpki_engine.py.

10.148.3 Member Data Documentation

10.148.3.1 rpki.rpki_engine.ca_detail_obj.ca_cert_uri

Definition at line 509 of file rpki_engine.py.

10.148.3.2 rpki.rpki_engine.ca_detail_obj.ca_id

Definition at line 663 of file rpki_engine.py.

10.148.3.3 rpki.rpki_engine.ca_detail_obj.gctx

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 662 of file rpki_engine.py.

10.148.3.4 rpki.rpki_engine.ca_detail_obj.latest_ca_cert

Definition at line 508 of file rpki_engine.py.

10.148.3.5 rpki.rpki_engine.ca_detail_obj.latest_crl

Definition at line 772 of file rpki_engine.py.

10.148.3.6 rpki.rpki_engine.ca_detail_obj.latest_manifest

Definition at line 806 of file rpki_engine.py.

10.148.3.7 rpki.rpki_engine.ca_detail_obj.latest_manifest_cert

Definition at line 619 of file rpki_engine.py.

10.148.3.8 rpki.rpki_engine.ca_detail_obj.manifest_private_key_id

Definition at line 617 of file rpki_engine.py.

10.148.3.9 rpki.rpki_engine.ca_detail_obj.manifest_public_key

Definition at line 618 of file rpki_engine.py.

10.148.3.10 rpki.rpki_engine.ca_detail_obj.nextUpdate

Definition at line 596 of file rpki_engine.py.

10.148.3.11 rpki.rpki_engine.ca_detail_obj.private_key_id

Definition at line 616 of file rpki_engine.py.

10.148.3.12 rpki.rpki_engine.ca_detail_obj.public_key

Definition at line 667 of file rpki_engine.py.

10.148.3.13 tuple rpki.rpki_engine.ca_detail_obj.sql_template [static]

Initial value:

```
rpki.sql.template(  
    "ca_detail",  
    "ca_detail_id",  
    ("private_key_id",          rpki.x509.RSA),  
    ("public_key",             rpki.x509.RSAPublic),  
    ("latest_ca_cert",         rpki.x509.X509),  
    ("manifest_private_key_id", rpki.x509.RSA),  
    ("manifest_public_key",    rpki.x509.RSAPublic),  
    ("latest_manifest_cert",   rpki.x509.X509),  
    ("latest_manifest",        rpki.x509.SignedManifest),  
    ("latest_crl",             rpki.x509.CRL),
```

```
"state",  
"ca_cert_uri",  
"ca_id")
```

Definition at line 450 of file rpki_engine.py.

10.148.3.14 rpki.rpki_engine.ca_detail_obj.state

Definition at line 516 of file rpki_engine.py.

The documentation for this class was generated from the following file:

10.149.1 Detailed Description

Internal CA object.

Definition at line 219 of file `rpki_engine.py`.

10.149.2 Member Function Documentation

10.149.2.1 `def rpki.rpki_engine.ca_obj.ca_details (self)`

Fetch all `ca_detail` objects that link to this CA object.

Definition at line 241 of file `rpki_engine.py`.

10.149.2.2 `def rpki.rpki_engine.ca_obj.check_for_updates (self, parent, rc, cb, eb)`

Parent has signaled continued existence of a resource class we already knew about, so we need to check for an updated certificate, changes in resource coverage, revocation and reissue with the same key, etc.

Definition at line 274 of file `rpki_engine.py`.

10.149.2.3 `def rpki.rpki_engine.ca_obj.construct_sia_uri (self, parent, rc)`

Construct the `sia_uri` value for this CA given configured information and the parent's up-down protocol `list_response` PDU.

Definition at line 261 of file `rpki_engine.py`.

10.149.2.4 def rpki.rpki_engine.ca_obj.create (cls, parent, rc, cb, eb)

Parent has signaled existence of a new resource class, so we need to create and set up a corresponding CA object.

Definition at line 332 of file rpki_engine.py.

10.149.2.5 def rpki.rpki_engine.ca_obj.delete (self, parent, callback)

The list of current resource classes received from parent does not include the class corresponding to this CA, so we need to delete it (and its little dog too...).

All certs published by this CA are now invalid, so need to withdraw them, the CRL, and the manifest from the repository, delete all child_cert and ca_detail records associated with this CA, then finally delete this CA itself.

Definition at line 356 of file rpki_engine.py.

10.149.2.6 def rpki.rpki_engine.ca_obj.fetch_active (self)

Fetch the active ca_detail for this CA, if any.

Definition at line 249 of file rpki_engine.py.

10.149.2.7 def rpki.rpki_engine.ca_obj.fetch_deprecated (self)

Fetch deprecated ca_details for this CA, if any.

Definition at line 253 of file rpki_engine.py.

10.149.2.8 def rpki.rpki_engine.ca_obj.fetch_pending (self)

Fetch the pending ca_details for this CA, if any.

Definition at line 245 of file rpki_engine.py.

10.149.2.9 def rpki.rpki_engine.ca_obj.fetch_revoked (self)

Fetch revoked ca_details for this CA, if any.

Definition at line 257 of file rpki_engine.py.

10.149.2.10 def rpki.rpki_engine.ca_obj.next_crl_number (self)

Allocate a CRL serial number.

Definition at line 400 of file rpki_engine.py.

10.149.2.11 def rpki.rpki_engine.ca_obj.next_manifest_number (self)

Allocate a manifest serial number.

Definition at line 392 of file rpki_engine.py.

10.149.2.12 def rpki.rpki_engine.ca_obj.next_serial_number (self)

Allocate a certificate serial number.

Definition at line 384 of file rpki_engine.py.

10.149.2.13 def rpki.rpki_engine.ca_obj.parent (self)

Fetch parent object to which this CA object links.

Definition at line 237 of file rpki_engine.py.

10.149.2.14 `def rpki.rpki_engine.ca_obj.rekey (self, cb, eb)`

Initiate a rekey operation for this ca. Generate a new keypair. Request cert from parent using new keypair. Mark result as our active ca_detail. Reissue all child certs issued by this ca using the new ca_detail.

Definition at line 408 of file rpki_engine.py.

10.149.2.15 `def rpki.rpki_engine.ca_obj.revoke (self, cb, eb)`

Revoke deprecated ca_detail objects associated with this ca.

Definition at line 433 of file rpki_engine.py.

10.149.3 Member Data Documentation**10.149.3.1** `rpki.rpki_engine.ca_obj.gctx`

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 339 of file rpki_engine.py.

10.149.3.2 `int rpki.rpki_engine.ca_obj.last_crl_sn = 0` `[static]`

Definition at line 233 of file rpki_engine.py.

10.149.3.3 `int rpki.rpki_engine.ca_obj.last_issued_sn = 0` `[static]`

Definition at line 234 of file rpki_engine.py.

10.149.3.4 `int rpki.rpki_engine.ca_obj.last_manifest_sn = 0` `[static]`

Definition at line 235 of file rpki_engine.py.

10.149.3.5 rpki.rpki_engine.ca_obj.parent_id

Definition at line 340 of file rpki_engine.py.

10.149.3.6 rpki.rpki_engine.ca_obj.parent_resource_class

Definition at line 341 of file rpki_engine.py.

10.149.3.7 rpki.rpki_engine.ca_obj.sia_uri

Definition at line 285 of file rpki_engine.py.

10.149.3.8 tuple rpki.rpki_engine.ca_obj.sql_template [static]

Initial value:

```
rpki.sql.template(  
    "ca",  
    "ca_id",  
    "last_crl_sn",  
    ("next_crl_update", rpki.sundial.datetime),  
    "last_issued_sn", "last_manifest_sn",  
    ("next_manifest_update", rpki.sundial.datetime),  
    "sia_uri", "parent_id", "parent_resource_class")
```

Definition at line 224 of file rpki_engine.py.

The documentation for this class was generated from the following file:

- def [uri_tail](#)

Public Attributes

- [ca_detail_id](#)
- [cert](#)
- [child_id](#)
- [gctx](#)

Static Public Attributes

- tuple [sql_template](#)

10.150.1 Detailed Description

Certificate that has been issued to a child.

Definition at line 816 of file `rpki_engine.py`.

10.150.2 Member Function Documentation

10.150.2.1 `def rpki.rpki_engine.child_cert_obj.__init__ (self, gctx = None, child_id = None, ca_detail_id = None, cert = None)`

Initialize a `child_cert_obj`.

Definition at line 829 of file `rpki_engine.py`.

10.150.2.2 `def rpki.rpki_engine.child_cert_obj.ca_detail (self)`

Fetch `ca_detail` object to which this `child_cert` object links.

Definition at line 845 of file `rpki_engine.py`.

10.150.2.3 def rpki.rpki_engine.child_cert_obj.child (self)

Fetch child object to which this child_cert object links.

Definition at line 841 of file rpki_engine.py.

10.150.2.4 def rpki.rpki_engine.child_cert_obj.fetch (cls, gctx = None, child = None, ca_detail = None, ski = None, unique = False)

Fetch all child_cert objects matching a particular set of parameters. This is a wrapper to consolidate various queries that would otherwise be inline SQL WHERE expressions. In most cases code calls this indirectly, through methods in other classes.

Definition at line 951 of file rpki_engine.py.

10.150.2.5 def rpki.rpki_engine.child_cert_obj.reissue (self, ca_detail, callback = None, errback = None, resources = None, sia = None)

Reissue an existing cert, reusing the public key. If the cert we would generate is identical to the one we already have, we just return the one we already have. If we have to revoke the old certificate when generating the new one, we have to generate a new child_cert_obj, so calling code that needs the updated child_cert_obj must use the return value from this method.

Definition at line 878 of file rpki_engine.py.

10.150.2.6 def rpki.rpki_engine.child_cert_obj.revoke (self, callback, errback, withdraw = True)

Revoke a child cert.

Definition at line 857 of file rpki_engine.py.

10.150.2.7 `def rpki.rpki_engine.child_cert_obj.uri (self, ca)`

Return the publication URI for this `child_cert`.

Definition at line 853 of file `rpki_engine.py`.

10.150.2.8 `def rpki.rpki_engine.child_cert_obj.uri_tail (self)`

Return the tail (filename) portion of the URI for this `child_cert`.

Definition at line 849 of file `rpki_engine.py`.

10.150.3 Member Data Documentation**10.150.3.1** `rpki.rpki_engine.child_cert_obj.ca_detail_id`

Definition at line 836 of file `rpki_engine.py`.

10.150.3.2 `rpki.rpki_engine.child_cert_obj.cert`

Definition at line 837 of file `rpki_engine.py`.

10.150.3.3 `rpki.rpki_engine.child_cert_obj.child_id`

Definition at line 835 of file `rpki_engine.py`.

10.150.3.4 `rpki.rpki_engine.child_cert_obj.gctx`

Reimplemented from [rpki.sql.sql_persistent](#).

Definition at line 834 of file `rpki_engine.py`.

10.150.3.5 tuple rpki.rpki_engine.child_cert_obj.sql_template [static]

Initial value:

```
rpki.sql.template(  
    "child_cert",  
    "child_cert_id",  
    ("cert", rpki.x509.X509),  
    "child_id",  
    "ca_detail_id",  
    "ski")
```

Definition at line 821 of file rpki_engine.py.

10.152.1 Detailed Description

A container for various global rpkid parameters.

Definition at line 39 of file `rpki_engine.py`.

10.152.2 Member Function Documentation

10.152.2.1 `def rpki.rpki_engine.rpkid_context.__init__ (self, cfg)`

Definition at line 44 of file `rpki_engine.py`.

10.152.2.2 `def rpki.rpki_engine.rpkid_context.build_https_ta_cache (self)`

Build dynamic TLS trust anchors.

Definition at line 199 of file `rpki_engine.py`.

10.152.2.3 `def rpki.rpki_engine.rpkid_context.clear_https_ta_cache (self)`

Clear dynamic TLS trust anchors.

Definition at line 190 of file `rpki_engine.py`.

10.152.2.4 `def rpki.rpki_engine.rpkid_context.cronjob_handler (self, query, path, cb)`

Periodic tasks. This is somewhat obsolete now that we have internal timers, but the test framework still uses this, and I haven't yet refactored this code to use the new timers.

Definition at line 150 of file `rpki_engine.py`.

10.152.2.5 `def rpki.rpki_engine.rpkid_context.irdb_query (self, self_handle, child_handle, callback, errback)`

Perform an IRDB callback query.

Definition at line 61 of file `rpki_engine.py`.

10.152.2.6 `def rpki.rpki_engine.rpkid_context.left_right_handler (self, query,
path, cb)`

Process one left-right PDU.

Definition at line 96 of file rpki_engine.py.

10.152.2.7 `def rpki.rpki_engine.rpkid_context.up_down_handler (self, query,
path, cb)`

Process one up-down PDU.

Definition at line 122 of file rpki_engine.py.

10.152.3 Member Data Documentation**10.152.3.1** `rpki.rpki_engine.rpkid_context.bpki_ta`

Definition at line 48 of file rpki_engine.py.

10.152.3.2 `rpki.rpki_engine.rpkid_context.https_server_host`

Definition at line 56 of file rpki_engine.py.

10.152.3.3 `rpki.rpki_engine.rpkid_context.https_server_port`

Definition at line 57 of file rpki_engine.py.

10.152.3.4 `rpki::rpki_engine.rpkid_context::https_ta_cache = None`
`[static]`

HTTPS trust anchor cache, to avoid regenerating it for every TLS connection.

Definition at line 188 of file rpki_engine.py.

10.152.3.5 rpki.rpki_engine.rpkid_context.irbe_cert

Definition at line 50 of file rpki_engine.py.

10.152.3.6 rpki.rpki_engine.rpkid_context.irdb_cert

Definition at line 49 of file rpki_engine.py.

10.152.3.7 rpki.rpki_engine.rpkid_context.irdb_url

Definition at line 54 of file rpki_engine.py.

10.152.3.8 rpki.rpki_engine.rpkid_context.publication_kludge_base

Definition at line 59 of file rpki_engine.py.

10.152.3.9 rpki.rpki_engine.rpkid_context.rpkid_cert

Definition at line 51 of file rpki_engine.py.

10.152.3.10 rpki.rpki_engine.rpkid_context.rpkid_key

Definition at line 52 of file rpki_engine.py.

10.152.3.11 rpki.rpki_engine.rpkid_context.sql

Definition at line 46 of file rpki_engine.py.

```
10.152.3.12 tuple rpki.rpki_engine.rpkid_context.up_down_url_regexp =  
    re.compile("/up-down/([-A-Z0-9_]+)/([-A-Z0-9_]+)$", re.I)  
    [static]
```

Definition at line 120 of file rpki_engine.py.

Whether this [object](#) is already in SQL or not.

10.154.1 Detailed Description

Mixin for persistent class that needs to be stored in SQL.

Definition at line 139 of file sql.py.

10.154.2 Member Function Documentation

10.154.2.1 `def rpki.sql.sql_persistent.sql_decode (self, vals)`

Initialize an object with values returned by `self.sql_fetch()`. This is a default version that assumes a one-to-one mapping between column names in SQL and attribute names in Python. If you need something fancier, override this.

Reimplemented in [rpki.rpki_engine.ca_detail_obj](#).

Definition at line 307 of file sql.py.

10.154.2.2 `def rpki.sql.sql_persistent.sql_delete (self)`

Delete this object from SQL.

Definition at line 280 of file sql.py.

10.154.2.3 def rpki.sql.sql_persistent.sql_delete_hook (self)

Customization hook.

Reimplemented in [rpki.left_right.route_origin_elt](#).

Definition at line 333 of file sql.py.

10.154.2.4 def rpki.sql.sql_persistent.sql_encode (self)

Convert object attributes into a dict for use with canned SQL queries. This is a default version that assumes a one-to-one mapping between column names in SQL and attribute names in Python. If you need something fancier, override this.

Definition at line 294 of file sql.py.

10.154.2.5 def rpki.sql.sql_persistent.sql_fetch (cls, gctx, id)

Fetch one object from SQL, based on its primary key.

Since in this one case we know that the primary index is also the cache key, we check for a cache hit directly in the hope of bypassing the SQL lookup entirely.

This method is usually called via a one-line class-specific wrapper. As a convenience, we also accept an id of None, and just return None in this case.

Definition at line 160 of file sql.py.

10.154.2.6 def rpki.sql.sql_persistent.sql_fetch_all (cls, gctx)

Fetch all objects of this type from SQL.

Definition at line 198 of file sql.py.

10.154.2.7 `def rpki.sql.sql_persistent.sql_fetch_hook (self)`

Customization hook.

Reimplemented in [rpki.left_right.route_origin_elt](#).

Definition at line 320 of file sql.py.

10.154.2.8 `def rpki.sql.sql_persistent.sql_fetch_where (cls, gctx, where, args = None, also_from = None)`

Fetch objects of this type matching an arbitrary SQL WHERE expression.

Definition at line 203 of file sql.py.

10.154.2.9 `def rpki.sql.sql_persistent.sql_fetch_where1 (cls, gctx, where, args = None, also_from = None)`

Fetch one object from SQL, based on an arbitrary SQL WHERE expression.

Definition at line 183 of file sql.py.

10.154.2.10 `def rpki.sql.sql_persistent.sql_init (cls, gctx, row, key)`

Initialize one Python object from the result of a SQL query.

Definition at line 230 of file sql.py.

10.154.2.11 `def rpki.sql.sql_persistent.sql_insert_hook (self)`

Customization hook.

Reimplemented in [rpki.left_right.route_origin_elt](#).

Definition at line 324 of file sql.py.

10.154.2.12 def rpki.sql.sql_persistent.sql_is_dirty (*self*)

Query whether this object needs to be written back to SQL.

Definition at line 250 of file sql.py.

10.154.2.13 def rpki.sql.sql_persistent.sql_mark_clean (*self*)

Mark this object as not needing to be written back to SQL.

Definition at line 246 of file sql.py.

10.154.2.14 def rpki.sql.sql_persistent.sql_mark_deleted (*self*)

Mark this object as needing to be deleted in SQL.

Definition at line 254 of file sql.py.

10.154.2.15 def rpki.sql.sql_persistent.sql_mark_dirty (*self*)

Mark this object as needing to be written back to SQL.

Definition at line 242 of file sql.py.

10.154.2.16 def rpki.sql.sql_persistent.sql_store (*self*)

Store this object to SQL.

Definition at line 258 of file sql.py.

10.154.2.17 def rpki.sql.sql_persistent.sql_update_hook (self)

Customization hook.

Definition at line 328 of file sql.py.

10.154.3 Member Data Documentation**10.154.3.1 rpki.sql.sql_persistent.gctx**

Reimplemented in [rpki.rpki_engine.ca_obj](#), [rpki.rpki_engine.ca_detail_obj](#), [rpki.rpki_engine.child_cert_obj](#), and [rpki.rpki_engine.revoked_cert_obj](#).

Definition at line 235 of file sql.py.

10.154.3.2 rpki::sql.sql_persistent::sql_debug = False [static]

Enable logging of SQL actions.

Definition at line 157 of file sql.py.

10.154.3.3 rpki::sql.sql_persistent::sql_deleted = False [static]

Whether our cached copy of this [object](#) has been deleted.

Definition at line 152 of file sql.py.

10.154.3.4 rpki::sql.sql_persistent::sql_in_db = False [static]

Whether this [object](#) is already in SQL or not.

Definition at line 147 of file sql.py.

- def [to_sql](#)
- def [toASN1tuple](#)
- def [toGeneralizedTime](#)
- def [totimestamp](#)
- def [toUTCtime](#)
- def [toXMLtime](#)

Static Public Attributes

- tuple [PKIX_threshold](#) = [pydatetime.datetime](#)(2050, 1, 1)
Threshold specified in RFC 3280 for switchover from UTCtime to GeneralizedTime.

10.156.1 Detailed Description

RPKI extensions to standard `datetime.datetime` class. All work here is in UTC, so we use naive datetime objects.

Definition at line 45 of file `sundial.py`.

10.156.2 Member Function Documentation

10.156.2.1 def `rpki.sundial.datetime.__add__ (self, other)`

Force correct class for timedelta results.

Definition at line 126 of file sundial.py.

10.156.2.2 def rpki.sundial.datetime.__str__ (*self*)

Definition at line 115 of file sundial.py.

10.156.2.3 def rpki.sundial.datetime.__sub__ (*self*, *other*)

Force correct class for timedelta results.

Definition at line 136 of file sundial.py.

10.156.2.4 def rpki.sundial.datetime.earlier (*self*, *other*)

Return the earlier of two timestamps.

Definition at line 170 of file sundial.py.

10.156.2.5 def rpki.sundial.datetime.from_sql (*cls*, *x*)

Convert from SQL storage format.

Definition at line 147 of file sundial.py.

10.156.2.6 def rpki.sundial.datetime.fromASN1tuple (*cls*, *x*)

Convert from ASN.1 tuple representation.

Definition at line 77 of file sundial.py.

10.156.2.7 def rpki.sundial.datetime.fromdatetime (*cls*, *x*)

Convert a datetime.datetime object into this subclass. This is whacky due to the weird constructors for datetime.

Definition at line 119 of file sundial.py.

10.156.2.8 def rpki.sundial.datetime.fromGeneralizedTime (*cls*, *x*)

Convert from ASN.1 GeneralizedTime.

Definition at line 68 of file sundial.py.

10.156.2.9 def rpki.sundial.datetime.fromUTCTime (*cls*, *x*)

Convert from ASN.1 UTCTime.

Definition at line 59 of file sundial.py.

10.156.2.10 def rpki.sundial.datetime.fromXMLtime (*cls*, *x*)

Convert from XML time representation.

Definition at line 102 of file sundial.py.

10.156.2.11 def rpki.sundial.datetime.later (*self*, *other*)

Return the later of two timestamps.

Definition at line 166 of file sundial.py.

10.156.2.12 def rpki.sundial.datetime.to_sql (self)

Convert to SQL storage format.

There's something whacky going on in the MySQLdb module, it throws range errors when storing a derived type into a DATETIME column. Investigate some day, but for now brute force this by copying the relevant fields into a datetime.datetime for MySQLdb's consumption.

Definition at line 151 of file sundial.py.

10.156.2.13 def rpki.sundial.datetime.toASN1tuple (self)

Convert to ASN.1 tuple representation.

Definition at line 92 of file sundial.py.

10.156.2.14 def rpki.sundial.datetime.toGeneralizedTime (self)

Convert to ASN.1 GeneralizedTime.

Definition at line 72 of file sundial.py.

10.156.2.15 def rpki.sundial.datetime.totimestamp (self)

Convert to seconds from epoch (like time.time()). Conversion method is a bit silly, but avoids time module timezone whackiness.

Definition at line 51 of file sundial.py.

10.156.2.16 def rpki.sundial.datetime.toUTCTime (self)

Convert to ASN.1 UTCTime.

Definition at line 63 of file sundial.py.

10.156.2.17 def rpki.sundial.datetime.toXMLtime (self)

Convert to XML time representation.

Definition at line 111 of file sundial.py.

10.156.3 Member Data Documentation

10.156.3.1 rpki::sundial.datetime::PKIX_threshold = pydatetime.datetime(2050, 1, 1) [static]

Threshold specified in RFC 3280 for switchover from UTCTime to GeneralizedTime.

Definition at line 90 of file sundial.py.

The documentation for this class was generated from the following file:

- [sundial.py \(2452\)](#)

10.157 rpki.sundial.timedelta Class Reference

Inherits [pydatetime::timedelta](#).

Public Member Functions

- def [convert_to_seconds](#)
- def [fromtimedelta](#)
- def [parse](#)

Static Public Attributes

- tuple [regex](#)
Hideously ugly regular expression to parse the complex text form.

10.157.1 Detailed Description

Timedelta with text parsing. This accepts two input formats:

- A simple integer, indicating a number of seconds.

- A string of the form "wD xH yM zS" where w, x, y, and z are integers and D, H, M, and S indicate days, hours, minutes, and seconds. All of the fields are optional, but at least one must be specified. Eg, "3D4H" means "three days plus four hours".

Definition at line 174 of file sundial.py.

10.157.2 Member Function Documentation

10.157.2.1 def rpki.sundial.timedelta.convert_to_seconds (*self*)

Convert a timedelta interval to seconds.

Definition at line 216 of file sundial.py.

10.157.2.2 def rpki.sundial.timedelta.fromtimedelta (*cls*, *x*)

Convert a datetime.timedelta object into this subclass.

Definition at line 221 of file sundial.py.

10.157.2.3 def rpki.sundial.timedelta.parse (*cls*, *arg*)

Parse text into a timedelta object.

Definition at line 200 of file sundial.py.

10.157.3 Member Data Documentation

10.157.3.1 rpki::sundial.timedelta::regexp [static]

Initial value:

```
re.compile("\\s*".join(["^",
                        "(?: (?P<days>\\d+)D) ?",
                        "(?: (?P<hours>\\d+)H) ?",
                        "(?: (?P<minutes>\\d+)M) ?",
                        "(?: (?P<seconds>\\d+)S) ?",
                        "$"]),
            re.I)
```

Hideously ugly regular expression to parse the complex text form.

Tags are intended for use with `re.MatchObject.groupdict()` and map directly to the keywords expected by the [timedelta](#) constructor.

Definition at line 191 of file `sundial.py`.

The documentation for this class was generated from the following file:

- [sundial.py \(2452\)](#)

10.158 rpki.up_down.base_elt Class Reference

Inherits [object](#).

Inherited by [rpki.up_down.certificate_elt](#), [rpki.up_down.class_elt](#), [rpki.up_down.class_response_syntax](#), [rpki.up_down.error_response_pdu](#), [rpki.up_down.issue_pdu](#), [rpki.up_down.list_pdu](#), [rpki.up_down.message_pdu](#), and [rpki.up_down.revoke_syntax](#).

Public Member Functions

- def [check_response](#)
- def [endElement](#)
- def [make_b64elt](#)
- def [make_elt](#)
- def [serve_pdu](#)
- def [startElement](#)

10.158.1 Detailed Description

Generic PDU object.

Virtual class, just provides some default methods.

Definition at line 43 of file `up_down.py`.

10.158.2 Member Function Documentation

10.158.2.1 def rpki.up_down.base_elt.check_response (self)

Placeholder for response checking.

Reimplemented in [rpki.up_down.issue_response_pdu](#), and [rpki.up_down.error_response_pdu](#).

Definition at line 91 of file up_down.py.

10.158.2.2 def rpki.up_down.base_elt.endElement (self, stack, name, text)

Ignore endElement() if there's no specific handler.

If we don't need to do anything else, just pop the stack.

Reimplemented in [rpki.up_down.certificate_elt](#), [rpki.up_down.class_elt](#), [rpki.up_down.issue_pdu](#), and [rpki.up_down.error_response_pdu](#).

Definition at line 59 of file up_down.py.

10.158.2.3 def rpki.up_down.base_elt.make_b64elt (self, elt, name, value = None)

Construct a sub-element with Base64 text content.

Definition at line 78 of file up_down.py.

10.158.2.4 def rpki.up_down.base_elt.make_elt (self, name, attrs)

Construct a element, copying over a set of attributes.

Definition at line 67 of file up_down.py.

10.158.2.5 `def rpki.up_down.base_elt.serve_pdu (self, q_msg, r_msg, child, callback, errback)`

Default PDU handler to catch unexpected types.

Reimplemented in [rpki.up_down.list_pdu](#), [rpki.up_down.issue_pdu](#), [rpki.up_down.revoke_pdu](#), [rootd.list_pdu](#), [rootd.issue_pdu](#), and [rootd.revoke_pdu](#).

Definition at line 87 of file `up_down.py`.

10.158.2.6 `def rpki.up_down.base_elt.startElement (self, stack, name, attrs)`

Ignore `startElement()` if there's no specific handler.

Some elements have no attributes and we only care about their text content.

Reimplemented in [rpki.up_down.certificate_elt](#), [rpki.up_down.class_elt](#), [rpki.up_down.class_response_syntax](#), [rpki.up_down.issue_pdu](#), [rpki.up_down.revoke_syntax](#), and [rpki.up_down.message_pdu](#).

Definition at line 50 of file `up_down.py`.

The documentation for this class was generated from the following file:

- [up_down.py \(2493\)](#)

10.159 rpki.up_down.certificate_elt Class Reference

Inherits [rpki::up_down::base_elt](#).

Public Member Functions

- `def endElement`
- `def startElement`
- `def toXML`

Public Attributes

- `cert`

- [cert_url](#)
- [req_resource_set_as](#)
- [req_resource_set_ipv4](#)
- [req_resource_set_ipv6](#)

10.159.1 Detailed Description

Up-Down protocol representation of an issued certificate.

Definition at line 128 of file up_down.py.

10.159.2 Member Function Documentation

10.159.2.1 `def rpki.up_down.certificate_elt.endElement (self, stack, name, text)`

Handle text content of a <certificate/> element.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 143 of file up_down.py.

10.159.2.2 `def rpki.up_down.certificate_elt.startElement (self, stack, name, attrs)`

Handle attributes of <certificate/> element.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 133 of file up_down.py.

10.159.2.3 `def rpki.up_down.certificate_elt.toXML (self)`

Generate a <certificate/> element.

Definition at line 151 of file up_down.py.

10.159.3 Member Data Documentation

10.159.3.1 rpki.up_down.certificate_elt.cert

Definition at line 148 of file up_down.py.

10.159.3.2 rpki.up_down.certificate_elt.cert_url

Definition at line 138 of file up_down.py.

10.159.3.3 rpki.up_down.certificate_elt.req_resource_set_as

Definition at line 139 of file up_down.py.

10.159.3.4 rpki.up_down.certificate_elt.req_resource_set_ipv4

Definition at line 140 of file up_down.py.

10.159.3.5 rpki.up_down.certificate_elt.req_resource_set_ipv6

Definition at line 141 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py \(2493\)](#)

10.160 rpki.up_down.class_elt Class Reference

Inherits [rpki::up_down::base_elt](#).

10.160.1 Detailed Description

Up-Down protocol representation of a resource class.

Definition at line 160 of file up_down.py.

10.160.2 Member Function Documentation

10.160.2.1 def rpki.up_down.class_elt.__init__ (self)

Initialize class_elt.

Definition at line 167 of file up_down.py.

10.160.2.2 def rpki.up_down.class_elt.endElement (self, stack, name, text)

Handle <class/> elements and their children.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 191 of file up_down.py.

10.160.2.3 def rpki.up_down.class_elt.from_resource_bag (self, bag)

Set resources of this class element from a resource_bag.

Definition at line 222 of file up_down.py.

10.160.2.4 def rpki.up_down.class_elt.startElement (self, stack, name, attrs)

Handle <class/> elements and their children.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 172 of file up_down.py.

10.160.2.5 def rpki.up_down.class_elt.to_resource_bag (self)

Build a resource_bag from from this <class/> element.

Definition at line 213 of file up_down.py.

10.160.2.6 def rpki.up_down.class_elt.toXML (self)

Generate a <class/> element.

Definition at line 201 of file up_down.py.

10.160.3 Member Data Documentation

10.160.3.1 rpki.up_down.class_elt.cert_url

Definition at line 184 of file up_down.py.

10.160.3.2 rpki.up_down.class_elt.certs

Definition at line 170 of file up_down.py.

10.160.3.3 rpki.up_down.class_elt.class_name

Definition at line 183 of file up_down.py.

10.160.3.4 rpki.up_down.class_elt.issuer = None [static]

Definition at line 165 of file up_down.py.

10.160.3.5 rpki.up_down.class_elt.resource_set_as

Definition at line 186 of file up_down.py.

10.160.3.6 rpki.up_down.class_elt.resource_set_ipv4

Definition at line 187 of file up_down.py.

10.160.3.7 rpki.up_down.class_elt.resource_set_ipv6

Definition at line 188 of file up_down.py.

10.160.3.8 rpki.up_down.class_elt.resource_set_notafter

Definition at line 189 of file up_down.py.

10.160.3.9 rpki.up_down.class_elt.suggested_sia_head

Definition at line 185 of file up_down.py.

The documentation for this class was generated from the following file:

Public Member Functions

- [def __init__](#)
- [def startElement](#)
- [def toXML](#)

Public Attributes

- [classes](#)

10.161.1 Detailed Description

Syntax for Up-Down protocol "list_response" and "issue_response" PDUs.

Definition at line 279 of file up_down.py.

10.161.2 Member Function Documentation

10.161.2.1 `def rpki.up_down.class_response_syntax.__init__ (self)`

Initialize class_response_syntax.

Definition at line 284 of file up_down.py.

10.161.2.2 `def rpki.up_down.class_response_syntax.startElement (self, stack, name, attrs)`

Handle "list_response" and "issue_response" PDUs.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 289 of file up_down.py.

10.161.2.3 `def rpki.up_down.class_response_syntax.toXML (self)`

Generate payload of "list_response" and "issue_response" PDUs.

Definition at line 299 of file up_down.py.

10.161.3 Member Data Documentation

10.161.3.1 `rpki.up_down.class_response_syntax.classes`

Definition at line 287 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py \(2493\)](#)

10.162 rpki.up_down.cms_msg Class Reference

Inherits [rpki::x509::XML_CMS_object](#).

Inherited by [rootd.cms_msg](#).

Public Attributes

- [description](#)
- [status](#)

Static Public Attributes

- dictionary [codes](#)
- dictionary [exceptions](#)

10.163.1 Detailed Description

Up-Down protocol "error_response" PDU.

Definition at line 497 of file up_down.py.

10.163.2 Member Function Documentation

10.163.2.1 `def rpki.up_down.error_response_pdu.__init__ (self, exception = None)`

Initialize an error_response PDU from an exception object.

Definition at line 516 of file up_down.py.

10.163.2.2 `def rpki.up_down.error_response_pdu.check_response (self)`

Handle an error response. For now, just raise an exception, perhaps figure out something more clever to do later.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 556 of file up_down.py.

10.163.2.3 `def rpki.up_down.error_response_pdu.endElement (self, stack, name, text)`

Handle "error_response" PDU.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 525 of file up_down.py.

10.163.2.4 def rpki.up_down.error_response_pdu.toXML (self)

Generate payload of "error_response" PDU.

Definition at line 541 of file up_down.py.

10.163.3 Member Data Documentation

10.163.3.1 dictionary rpki.up_down.error_response_pdu.codes [static]

Initial value:

```
{
    1101 : "Already processing request",
    1102 : "Version number error",
    1103 : "Unrecognised request type",
    1201 : "Request - no such resource class",
    1202 : "Request - no resources allocated in resource class",
    1203 : "Request - badly formed certificate request",
    1301 : "Revoke - no such resource class",
    1302 : "Revoke - no such key",
    2001 : "Internal Server Error - Request not performed" }
```

Definition at line 502 of file up_down.py.

10.163.3.2 rpki.up_down.error_response_pdu.description

Definition at line 523 of file up_down.py.

10.163.3.3 dictionary rpki.up_down.error_response_pdu.exceptions [static]

Initial value:

```
{  
    rpki.exceptions.NoActiveCA : 1202 }
```

Definition at line 513 of file up_down.py.

10.163.3.4 rpki.up_down.error_response_pdu.status

Definition at line 522 of file up_down.py.

The documentation for this class was generated from the following file:

- [pkcs10](#)
- [req_resource_set_as](#)
- [req_resource_set_ipv4](#)
- [req_resource_set_ipv6](#)

10.164.1 Detailed Description

Up-Down protocol "issue" PDU.

Definition at line 309 of file up_down.py.

10.164.2 Member Function Documentation

10.164.2.1 `def rpki.up_down.issue_pdu.endElement (self, stack, name, text)`

Handle "issue" PDU.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 324 of file up_down.py.

10.164.2.2 `def rpki.up_down.issue_pdu.query (cls, parent, ca, ca_detail, callback, errback)`

Send an "issue" request to parent associated with ca.

Definition at line 409 of file up_down.py.

10.164.2.3 `def rpki.up_down.issue_pdu.serve_pdu (self, q_msg, r_msg, child, callback, errback)`

Serve one issue request PDU.

Reimplemented from [rpki.up_down.base_elt](#).

Reimplemented in [rootd.issue_pdu](#).

Definition at line 341 of file up_down.py.

10.164.2.4 `def rpki.up_down.issue_pdu.startElement (self, stack, name, attrs)`

Handle "issue" PDU.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 314 of file up_down.py.

10.164.2.5 def rpki.up_down.issue_pdu.toXML (*self*)

Generate payload of "issue" PDU.

Definition at line 332 of file up_down.py.

10.164.3 Member Data Documentation**10.164.3.1 rpki.up_down.issue_pdu.class_name**

Definition at line 319 of file up_down.py.

10.164.3.2 rpki.up_down.issue_pdu.pkcs10

Definition at line 329 of file up_down.py.

10.164.3.3 rpki.up_down.issue_pdu.req_resource_set_as

Definition at line 320 of file up_down.py.

10.164.3.4 rpki.up_down.issue_pdu.req_resource_set_ipv4

Definition at line 321 of file up_down.py.

10.164.3.5 rpki.up_down.issue_pdu.req_resource_set_ipv6

Definition at line 322 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py \(2493\)](#)

10.165 rpki.up_down.issue_response_pdu Class Reference

Inherits [rpki::up_down::class_response_syntax](#).

Public Member Functions

- def [check_response](#)

10.165.1 Detailed Description

Up-Down protocol "issue_response" PDU.

Definition at line 421 of file up_down.py.

10.165.2 Member Function Documentation

10.165.2.1 def rpki.up_down.issue_response_pdu.check_response (*self*)

Check whether this looks like a reasonable issue_response PDU.
XML schema should be tighter for this response.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 426 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py](#) (2493)

Inherited by [rootd.list_pdu](#).

Public Member Functions

- def [query](#)
- def [serve_pdu](#)
- def [toXML](#)

10.166.1 Detailed Description

Up-Down protocol "list" PDU.

Definition at line 231 of file up_down.py.

10.166.2 Member Function Documentation

10.166.2.1 def rpki.up_down.list_pdu.query (*cls*, *parent*, *cb*, *eb*)

Send a "list" query to parent.

Definition at line 275 of file up_down.py.

10.166.2.2 def rpki.up_down.list_pdu.serve_pdu (*self*, *q_msg*, *r_msg*, *child*, *callback*, *errback*)

Serve one "list" PDU.

Reimplemented from [rpki.up_down.base_elt](#).

Reimplemented in [rootd.list_pdu](#).

Definition at line 240 of file up_down.py.

10.166.2.3 def rpki.up_down.list_pdu.toXML (*self*)

Generate (empty) payload of "list" PDU.

Definition at line 236 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py](#) (2493)

10.167 rpki.up_down.list_response_pdu Class Reference

Inherits [rpki::up_down::class_response_syntax](#).

10.167.1 Detailed Description

Up-Down protocol "list_response" PDU.

Definition at line 303 of file up_down.py.

The documentation for this class was generated from the following file:

- [up_down.py \(2493\)](#)

10.168 rpki.up_down.message_pdu Class Reference

Inherits [rpki::up_down::base_elt](#).

Inherited by [rootd.message_pdu](#).

Public Member Functions

- def [__str__](#)
- def [make_query](#)
- def [serve_error](#)
- def [serve_top_level](#)
- def [startElement](#)
- def [toXML](#)

Public Attributes

- [payload](#)
- [recipient](#)
- [sender](#)
- [type](#)
- [version](#)

Static Public Attributes

- dictionary [name2type](#)
- tuple [type2name](#) = dict((v, k) for k, v in name2type.items())
- int [version](#) = 1

10.168.1 Detailed Description

Up-Down protocol message wrapper PDU.

Definition at line 563 of file up_down.py.

10.168.2 Member Function Documentation

10.168.2.1 def rpki.up_down.message_pdu.__str__ (*self*)

Convert a message PDU to a string.

Definition at line 605 of file up_down.py.

10.168.2.2 def rpki.up_down.message_pdu.make_query (*cls*, *payload*, *sender*, *recipient*)

Construct one message PDU.

Definition at line 645 of file up_down.py.

10.168.2.3 def rpki.up_down.message_pdu.serve_error (*self*, *exception*)

Generate an error_response message PDU.

Definition at line 633 of file up_down.py.

10.168.2.4 def rpki.up_down.message_pdu.serve_top_level (*self*, *child*, *callback*)

Serve one message request PDU.

Definition at line 609 of file up_down.py.

10.168.2.5 def rpki.up_down.message_pdu.startElement (*self*, *stack*, *name*, *attrs*)

Handle message PDU.

Payload of the <message/> element varies depending on the "type" attribute, so after some basic checks we have to instantiate the right class object to handle whatever kind of PDU this is.

Reimplemented from [rpki.up_down.base_elt](#).

Definition at line 589 of file up_down.py.

10.168.2.6 def rpki.up_down.message_pdu.toXML (self)

Generate payload of message PDU.

Definition at line 581 of file up_down.py.

10.168.3 Member Data Documentation

10.168.3.1 dictionary rpki.up_down.message_pdu.name2type [static]

Initial value:

```
{
    "list"           : list_pdu,
    "list_response"  : list_response_pdu,
    "issue"          : issue_pdu,
    "issue_response" : issue_response_pdu,
    "revoke"         : revoke_pdu,
    "revoke_response": revoke_response_pdu,
    "error_response" : error_response_pdu }
```

Reimplemented in [rootd.message_pdu](#).

Definition at line 570 of file up_down.py.

10.168.3.2 rpki.up_down.message_pdu.payload

Definition at line 602 of file up_down.py.

10.168.3.3 rpki.up_down.message_pdu.recipient

Definition at line 600 of file up_down.py.

10.168.3.4 rpki.up_down.message_pdu.sender

Definition at line 599 of file up_down.py.

10.168.3.5 rpki.up_down.message_pdu.type

Definition at line 601 of file up_down.py.

DER value of this object.

- [POW](#)

Static Public Attributes

- `debug_cms_certs` = False
Set this to True to [log](#) a lot of chatter about CMS certificates.
- `dump_on_verify_failure` = True
Set this to True to get `dumpasn1` dumps of ASN.1 on CMS verify failures.
- tuple `econtent_oid` = POWify_OID("id-data")
- tuple `formats` = ("DER", "[POW](#)")
Formats supported in this [object](#).
- tuple `other_clear` = ("content",)
Other attributes that `self.clear()` should whack.
- tuple `pem_converter` = `PEM_converter("CMS")`
PEM converter for this [object](#).
- `print_on_der_error` = True
Set this to True to [log](#) alleged DER when we have trouble parsing it, in case it's really a Perl backtrace or something.
- `require_crls` = False
Set this to False to make CMS CRLs optional in the cases where we would otherwise require them.

10.174.1 Detailed Description

Class to hold a CMS-wrapped object.

CMS-wrapped objects are a little different from the other DER_object types because the signed object is CMS wrapping inner content that's also ASN.1, and due to our current minimal support for CMS we can't just handle this as a pretty composite object. So, for now anyway, a CMS_object is the outer CMS wrapped object so that the usual DER and PEM operations do the obvious things, and the inner content is handle via separate methods.

Definition at line 665 of file x509.py.

10.174.2 Member Function Documentation

10.174.2.1 `def rpki.x509.CMS_object.extract (self)`

Extract and store inner content from CMS wrapper without verifying the CMS.

DANGER WILL ROBINSON!!!

Do not use this method on unvalidated data. Use the `verify()` method instead.

If you don't understand this warning, don't use this method.

Definition at line 816 of file `x509.py`.

10.174.2.2 `def rpki.x509.CMS_object.get_content (self)`

Get the inner content of this `CMS_object`.

Definition at line 727 of file `x509.py`.

10.174.2.3 `def rpki.x509.CMS_object.get_DER (self)`

Get the DER value of this `CMS_object`.

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 706 of file `x509.py`.

10.174.2.4 `def rpki.x509.CMS_object.get_POW (self)`

Get the POW value of this `CMS_object`.

Definition at line 718 of file `x509.py`.

10.174.2.5 `def rpki.x509.CMS_object.set_content (self, content)`

Set the (inner) content of this `CMS_object`, clearing the wrapper.

Definition at line 734 of file `x509.py`.

10.174.2.6 `def rpki.x509.CMS_object.sign (self, keypair, certs, crls = None, no_certs = False)`

Sign and wrap inner content.

Definition at line 844 of file x509.py.

10.174.2.7 `def rpki.x509.CMS_object.verify (self, ta)`

Verify CMS wrapper and store inner content.

Definition at line 741 of file x509.py.

10.174.3 Member Data Documentation

10.174.3.1 rpki.x509.CMS_object.content

Reimplemented in [rpki.x509.DER_CMS_object](#), and [rpki.x509.XML_CMS_object](#).

Definition at line 739 of file x509.py.

10.174.3.2 `rpki::x509.CMS_object::debug_cms_certs = False` `[static]`

Set this to True to [log](#) a lot of chatter about CMS certificates.

Definition at line 691 of file x509.py.

10.174.3.3 rpki.x509.CMS_object.DER

DER value of this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 714 of file x509.py.

10.174.3.4 `rpki.x509.CMS_object.dump_on_verify_failure = True`
[static]

Set this to True to get dumpasn1 dumps of ASN.1 on CMS verify failures.
Definition at line 686 of file x509.py.

10.174.3.5 `tuple rpki.x509.CMS_object.econtent_oid =`
`POWify_OID("id-data")` [static]

Reimplemented in [rpki.x509.SignedManifest](#), [rpki.x509.ROA](#), and [rpki.x509.XML_CMS_object](#).

Definition at line 680 of file x509.py.

10.174.3.6 `tuple rpki.x509.CMS_object.formats = ("DER", "POW")`
[static]

Formats supported in this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 678 of file x509.py.

10.174.3.7 `tuple rpki.x509.CMS_object.other_clear = ("content",)` [static]

Other attributes that self.clear() should whack.

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 679 of file x509.py.

10.174.3.8 `tuple rpki.x509.CMS_object.pem_converter =`
`PEM_converter("CMS")` [static]

PEM converter for this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Reimplemented in [rpki.x509.SignedManifest](#), and [rpki.x509.ROA](#).

Definition at line 681 of file x509.py.

10.174.3.9 **rpki.x509.CMS_object.POW**

Definition at line 724 of file x509.py.

10.174.3.10 **rpki::x509.CMS_object::print_on_der_error = True** [static]

Set this to True to [log](#) alleged DER when we have trouble parsing it, in case it's really a Perl backtrace or something.

Definition at line 704 of file x509.py.

10.174.3.11 **rpki::x509.CMS_object::require_crls = False** [static]

Set this to False to make CMS CRLs optional in the cases where we would otherwise require them.

Some day this option should go away and CRLs should be unconditionally mandatory in such cases.

Definition at line 698 of file x509.py.

The documentation for this class was generated from the following file:

- [x509.py \(2496\)](#)

10.175 **rpki.x509.CRL Class Reference**

Inherits [rpki::x509::DER_object](#).

PEM converter for this [object](#).

10.175.1 Detailed Description

Class to hold a Certificate Revocation List.

Definition at line 1044 of file x509.py.

10.175.2 Member Function Documentation

10.175.2.1 `def rpki.x509.CRL.generate (cls, keypair, issuer, serial, thisUpdate, nextUpdate, revokedCertificates, version = 1, digestType = "sha256WithRSAEncryption")`

Generate a new CRL.

Definition at line 1100 of file x509.py.

10.175.2.2 `def rpki.x509.CRL.get_DER (self)`

Get the DER value of this CRL.

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 1052 of file x509.py.

10.175.2.3 def rpki.x509.CRL.get_POW (self)

Get the POW value of this CRL.

Definition at line 1067 of file x509.py.

10.175.2.4 def rpki.x509.CRL.get_POWpkix (self)

Get the POW.pkix value of this CRL.

Definition at line 1076 of file x509.py.

10.175.2.5 def rpki.x509.CRL.getIssuer (self)

Get issuer value of this CRL.

Definition at line 1095 of file x509.py.

10.175.2.6 def rpki.x509.CRL.getNextUpdate (self)

Get nextUpdate value from this CRL.

Definition at line 1091 of file x509.py.

10.175.2.7 def rpki.x509.CRL.getThisUpdate (self)

Get thisUpdate value from this CRL.

Definition at line 1087 of file x509.py.

10.175.3 Member Data Documentation

10.175.3.1 rpki.x509.CRL.DER

DER value of this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 1060 of file x509.py.

```
10.175.3.2 tuple rpki.x509.CRL.formats = ("DER", "POW", "POWpkix")  
[static]
```

Formats supported in this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 1049 of file x509.py.

```
10.175.3.3 tuple rpki.x509.CRL.pem_converter = PEM_converter("X509  
CRL") [static]
```

PEM converter for this [object](#).

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 1050 of file x509.py.

10.175.3.4 rpki.x509.CRL.POW

Definition at line 1073 of file x509.py.

10.175.3.5 rpki.x509.CRL.POWpkix

Definition at line 1084 of file x509.py.

10.177.1 Detailed Description

Virtual class to hold a generic DER object.

Definition at line 104 of file x509.py.

10.177.2 Member Function Documentation

10.177.2.1 `def rpki.x509.DER_object.__cmp__(self, other)`

Compare two DER-encoded objects.

Definition at line 199 of file x509.py.

10.177.2.2 `def rpki.x509.DER_object.__init__(self, kw)`

Initialize a DER_object.

Definition at line 137 of file x509.py.

10.177.2.3 def rpki.x509.DER_object.clear (self)

Make this object empty.

Definition at line 130 of file x509.py.

10.177.2.4 def rpki.x509.DER_object.dumpasn1 (self)

Pretty print an ASN.1 DER object using cryptlib dumpasn1 tool.
Use a temporary file rather than popen4() because dumpasn1 uses
seek() when decoding ASN.1 content nested in OCTET STRING values.

Definition at line 298 of file x509.py.

10.177.2.5 def rpki.x509.DER_object.empty (self)

Test whether this object is empty.

Definition at line 121 of file x509.py.

10.177.2.6 def rpki.x509.DER_object.from_sql (cls, x)

Convert from SQL storage format.

Definition at line 290 of file x509.py.

10.177.2.7 def rpki.x509.DER_object.gAKI (self)

Calculate g(AKI) for this object. Only work for subclasses
that implement get_AKI().

Definition at line 226 of file x509.py.

10.177.2.8 def rpki.x509.DER_object.get_3779resources (self)

Get RFC 3779 resources as rpki.resource_set objects. Only works for subclasses that support getExtensions().

Definition at line 277 of file x509.py.

10.177.2.9 def rpki.x509.DER_object.get_AIA (self)

Get the SIA extension from this object. Only works for subclasses that support getExtension().

Definition at line 255 of file x509.py.

10.177.2.10 def rpki.x509.DER_object.get_AKI (self)

Get the AKI extension from this object. Only works for subclasses that support getExtension().

Definition at line 233 of file x509.py.

10.177.2.11 def rpki.x509.DER_object.get_Base64 (self)

Get the Base64 encoding of the DER value of this object.

Definition at line 191 of file x509.py.

10.177.2.12 def rpki.x509.DER_object.get_basicConstraints (self)

Get the basicConstraints extension from this object. Only works for subclasses that support getExtension().

Definition at line 262 of file x509.py.

10.177.2.13 def rpki.x509.DER_object.get_DER (self)

Get the DER value of this object.

Subclasses will almost certainly override this method.

Reimplemented in [rpki.x509.X509](#), [rpki.x509.PKCS10](#), [rpki.x509.RSA](#), [rpki.x509.RSAPublic](#), [rpki.x509.CMS_object](#), and [rpki.x509.CRL](#).

Definition at line 180 of file x509.py.

10.177.2.14 def rpki.x509.DER_object.get_PEM (self)

Get the PEM representation of this object.

Definition at line 195 of file x509.py.

10.177.2.15 def rpki.x509.DER_object.get_SIA (self)

Get the SIA extension from this object. Only works for subclasses that support `getExtension()`.

Definition at line 248 of file x509.py.

10.177.2.16 def rpki.x509.DER_object.get_SKI (self)

Get the SKI extension from this object. Only works for subclasses that support `getExtension()`.

Reimplemented in [rpki.x509.RSA](#), and [rpki.x509.RSAPublic](#).

Definition at line 241 of file x509.py.

10.177.2.17 def rpki.x509.DER_object.gSKI (self)

Calculate g(SKI) for this object. Only work for subclasses that implement get_SKI().

Definition at line 211 of file x509.py.

10.177.2.18 def rpki.x509.DER_object.hAKI (self)

Return hexadecimal string representation of AKI for this object. Only work for subclasses that implement get_AKI().

Definition at line 218 of file x509.py.

10.177.2.19 def rpki.x509.DER_object.hSKI (self)

Return hexadecimal string representation of SKI for this object. Only work for subclasses that implement get_SKI().

Definition at line 203 of file x509.py.

10.177.2.20 def rpki.x509.DER_object.is_CA (self)

Return True if and only if object has the basicConstraints extension and its cA value is true.

Definition at line 269 of file x509.py.

10.177.2.21 def rpki.x509.DER_object.set (self, kw)

Set this object by setting one of its known formats.

This method only allows one to set one format at a time. Subsequent calls will clear the object first. The point of all this is to let the object's internal converters handle mustering the object into whatever format you need at the moment.

Definition at line 145 of file x509.py.

10.177.2.22 def rpki.x509.DER_object.to_sql (self)

Convert to SQL storage format.

Definition at line 294 of file x509.py.

10.177.3 Member Data Documentation

10.177.3.1 rpki::x509.DER_object::DER

DER value of this [object](#).

Reimplemented in [rpki.x509.X509](#), [rpki.x509.PKCS10](#), [rpki.x509.RSA](#), [rpki.x509.RSAPublic](#), [rpki.x509.CMS_object](#), and [rpki.x509.CRL](#).

Definition at line 163 of file x509.py.

10.177.3.2 tuple rpki.x509.DER_object.formats = ("DER",) [static]

Formats supported in this [object](#).

Reimplemented in [rpki.x509.X509](#), [rpki.x509.PKCS10](#), [rpki.x509.RSA](#), [rpki.x509.RSAPublic](#), [rpki.x509.CMS_object](#), and [rpki.x509.CRL](#).

Definition at line 110 of file x509.py.

10.177.3.3 tuple rpki.x509.DER_object.other_clear = () [static]

Other attributes that self.clear() should whack.

Reimplemented in [rpki.x509.CMS_object](#).

Definition at line 116 of file x509.py.

10.177.3.4 rpki.x509.DER_object.pem_converter = None [static]

PEM converter for this [object](#).

Reimplemented in [rpki.x509.X509](#), [rpki.x509.PKCS10](#), [rpki.x509.RSA](#), [rpki.x509.RSAPublic](#), [rpki.x509.CMS_object](#), [rpki.x509.SignedManifest](#), [rpki.x509.ROA](#), and [rpki.x509.CRL](#).

PEM converter for this [object](#).

10.179.1 Detailed Description

Class to hold a PKCS #10 request.

Definition at line 464 of file x509.py.

10.179.2 Member Function Documentation

10.179.2.1 def rpki.x509.PKCS10.check_valid_rpki (*self*)

Check this certification request to see whether it's a valid request for an RPKI certificate. This is broken out of the up-down protocol code because it's somewhat involved and the up-down code doesn't need to know the details.

Throws an exception if the request isn't valid, so if this method returns at all, the request is ok.

Definition at line 499 of file x509.py.

10.179.2.2 `def rpki.x509.PKCS10.create (cls, keypair, exts = None)`

Create a new request for a given keypair, including given extensions.

Definition at line 559 of file x509.py.

10.179.2.3 `def rpki.x509.PKCS10.create_ca (cls, keypair, sia = None)`

Create a new request for a given keypair, including given SIA value.

Definition at line 546 of file x509.py.

10.179.2.4 `def rpki.x509.PKCS10.get_DER (self)`

Get the DER value of this certification request.

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 472 of file x509.py.

10.179.2.5 `def rpki.x509.PKCS10.get_POWpkix (self)`

Get the POW.pkix value of this certification request.

Definition at line 484 of file x509.py.

10.179.2.6 def rpki.x509.PKCS10.getPublicKey (*self*)

Extract the public key from this certification request.

Definition at line 495 of file x509.py.

10.179.3 Member Data Documentation

10.179.3.1 rpki.x509.PKCS10.DER

DER value of this [object](#).

Formats supported in this `object`.
- tuple `pem_converter` = `PEM_converter`("CERTIFICATE")
PEM converter for this `object`.

10.184.1 Detailed Description

X.509 certificates.

This class is designed to hold all the different representations of X.509 certs we're using and convert between them. X.509 support in Python a nasty maze of half-cooked stuff (except perhaps for `cryptlib`, which is just different). Users of this module should not have to care about this implementation nightmare.

Definition at line 318 of file `x509.py`.

10.184.2 Member Function Documentation

10.184.2.1 def rpki.x509.X509.expired (*self*)

Test whether this certificate has expired.

Definition at line 391 of file x509.py.

10.184.2.2 def rpki.x509.X509.get_DER (*self*)

Get the DER value of this certificate.

Reimplemented from [rpki.x509.DER_object](#).

Definition at line 332 of file x509.py.

10.184.2.3 def rpki.x509.X509.get_POW (*self*)

Get the POW value of this certificate.

Definition at line 347 of file x509.py.

10.184.2.4 def rpki.x509.X509.get_POWpkix (*self*)

Get the POW.pkix value of this certificate.

Definition at line 356 of file x509.py.

10.184.2.5 def rpki.x509.X509.getIssuer (*self*)

Get the issuer of this certificate.

Definition at line 367 of file x509.py.

10.184.2.6 def rpki.x509.X509.getNotAfter (*self*)

Get the expiration time of this certificate.

Definition at line 379 of file x509.py.

10.184.2.7 def rpki.x509.X509.getNotBefore (*self*)

Get the inception time of this certificate.

Definition at line 375 of file x509.py.

10.184.2.8 def rpki.x509.X509.getPublicKey (*self*)

Extract the public key from this certificate.

Definition at line 387 of file x509.py.

10.184.2.9 def rpki.x509.X509.getSerial (*self*)

Get the serial number of this certificate.

Definition at line 383 of file x509.py.

10.184.2.10 def rpki.x509.X509.getSubject (*self*)

Get the subject of this certificate.

Definition at line 371 of file x509.py.

10.184.2.11 `def rpki.x509.X509.issue (self, keypair, subject_key, serial, sia, aia, crldp, notAfter, cn = None, resources = None, is_ca = True)`

Issue a certificate.

Definition at line 395 of file x509.py.

10.184.2.12 `def rpki.x509.X509.normalize_chain (cls, chain)`

Normalize a chain of certificates into a tuple of X509 objects. Given all the glue certificates needed for BPKI cross certification, it's easiest to allow sloppy arguments to the HTTPS and CMS validation methods and provide a single method that normalizes the allowed cases. So this method allows X509, None, lists, and tuples, and returns a tuple of X509 objects.

Definition at line 451 of file x509.py.

10.184.3 Member Data Documentation

10.184.3.1 `rpki.x509.X509.DER`

Boolean attributes (value "yes" or "no") for this element.
- tuple [elements](#) = ()
XML elements contained by this element.

10.186.1 Detailed Description

Virtual base class for XML message elements. The left-right and publication protocols use this. At least for now, the up-down protocol does not, due to different design assumptions.

Definition at line 126 of file xml_utils.py.

10.186.2 Member Function Documentation

10.186.2.1 def rpki.xml_utils.base_elt.__str__ (self)

Convert a base_elt object to string format.

Definition at line 201 of file xml_utils.py.

10.186.2.2 def rpki.xml_utils.base_elt.endElement (self, stack, name, text)

Default endElement() handler: just pop the stack.

Reimplemented in [rpki.left_right.child_elt](#), [rpki.publication.client_elt](#), [rpki.publication.publication_object_elt](#), and [rpki.xml_utils.data_elt](#).

Definition at line 153 of file xml_utils.py.

10.186.2.3 `def rpki.xml_utils.base_elt.make_b64elt (self, elt, name, value = None)`

Constructor for Base64-encoded subelement.

Definition at line 192 of file xml_utils.py.

10.186.2.4 `def rpki.xml_utils.base_elt.make_elt (self)`

XML element constructor.

Definition at line 178 of file xml_utils.py.

10.186.2.5 `def rpki.xml_utils.base_elt.make_pdu (cls, kargs)`

Generic PDU constructor.

Definition at line 208 of file xml_utils.py.

10.186.2.6 `def rpki.xml_utils.base_elt.read_attrs (self, attrs)`

Template-driven attribute reader.

Definition at line 166 of file xml_utils.py.

10.186.2.7 `def rpki.xml_utils.base_elt.startElement (self, stack, name, attrs)`

Default startElement() handler: just process attributes.

Reimplemented in [rpki.left_right.route_origin_elt](#), [rpki.left_right.list_resources_elt](#), and [rpki.publication.config_elt](#).

Definition at line 145 of file xml_utils.py.

10.186.2.8 def rpki.xml_utils.base_elt.toXML (self)

Default toXML() element generator.

Reimplemented in [rpki.left_right.list_resources_elt](#), [rpki.publication.publication_object_elt](#), and [rpki.xml_utils.data_elt](#).

Definition at line 160 of file xml_utils.py.

10.186.3 Member Data Documentation

10.186.3.1 rpki::xml_utils.base_elt::attributes = () [static]

XML attributes for this element.

Reimplemented in [rpki.left_right.self_elt](#), [rpki.left_right.bsc_elt](#), [rpki.left_right.repository_elt](#), [rpki.left_right.parent_elt](#), [rpki.left_right.child_elt](#), [rpki.left_right.route_origin_elt](#), [rpki.left_right.list_resources_elt](#), [rpki.left_right.report_error_elt](#), [rpki.publication.config_elt](#), [rpki.publication.client_elt](#), [rpki.publication.publication_object_elt](#), and [rpki.publication.report_error_elt](#).

Definition at line 135 of file xml_utils.py.

10.186.3.2 rpki::xml_utils.base_elt::booleans = () [static]

Boolean attributes (value "yes" or "no") for this element.

Reimplemented in [rpki.left_right.self_elt](#), [rpki.left_right.bsc_elt](#), [rpki.left_right.parent_elt](#), [rpki.left_right.child_elt](#), and [rpki.left_right.route_origin_elt](#).

10.187.1 Detailed Description

Virtual base class for PDUs that map to SQL objects. These objects all implement the create/set/get/list/destroy action attribute.

Definition at line 219 of file `xml_utils.py`.

10.187.2 Member Function Documentation

10.187.2.1 def rpki.xml_utils.data_elt.endElement (*self*, *stack*, *name*, *text*)

Default `endElement` handler for SQL-based objects. This assumes that sub-elements are Base64-encoded using the `sql_template` mechanism.

Reimplemented from [rpki.xml_utils.base_elt](#).

Reimplemented in [rpki.left_right.child_elt](#), and [rpki.publication.client_elt](#).

Definition at line 225 of file xml_utils.py.

10.187.2.2 def rpki.xml_utils.data_elt.make_reply (self, r_pdu = None)

Construct a reply PDU.

Definition at line 251 of file xml_utils.py.

10.187.2.3 def rpki.xml_utils.data_elt.make_reply_clone_hook (self, r_pdu)

Overridable hook.

Reimplemented in [rpki.left_right.data_elt](#).

Definition at line 267 of file xml_utils.py.

10.187.2.4 def rpki.xml_utils.data_elt.serve_create (self, r_msg, cb, eb)

Handle a create action.

Definition at line 289 of file xml_utils.py.

10.187.2.5 def rpki.xml_utils.data_elt.serve_destroy (self, r_msg, cb, eb)

Handle a destroy action.

Definition at line 351 of file xml_utils.py.

10.187.2.6 `def rpki.xml_utils.data_elt.serve_dispatch (self, r_msg, cb, eb)`

Action dispatch handler.

Reimplemented in [rpki.publication.control_elt](#).

Definition at line 360 of file `xml_utils.py`.

10.187.2.7 `def rpki.xml_utils.data_elt.serve_fetch_one (self)`

Find the object on which a `get`, `set`, or `destroy` method should operate.

Definition at line 271 of file `xml_utils.py`.

10.187.2.8 `def rpki.xml_utils.data_elt.serve_get (self, r_msg, cb, eb)`

Handle a `get` action.

Definition at line 333 of file `xml_utils.py`.

10.187.2.9 `def rpki.xml_utils.data_elt.serve_list (self, r_msg, cb, eb)`

Handle a `list` action for non-self objects.

Definition at line 342 of file `xml_utils.py`.

10.187.2.10 `def rpki.xml_utils.data_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)`

Overridable hook.

Reimplemented in [rpki.left_right.self_elt](#), [rpki.left_right.parent_elt](#), [rpki.left_right.child_elt](#), [rpki.left_right.route_origin_elt](#), and [rpki.publication.client_elt](#).

Definition at line 285 of file `xml_utils.py`.

10.187.2.11 `def rpki.xml_utils.data_elt.serve_pre_save_hook (self, q_pdu, r_pdu, cb, eb)`

Overridable hook.

Reimplemented in [rpki.left_right.data_elt](#), and [rpki.left_right.bsc_elt](#).

Definition at line 281 of file `xml_utils.py`.

10.187.2.12 `def rpki.xml_utils.data_elt.serve_set (self, r_msg, cb, eb)`

Handle a set action.

Reimplemented in [rpki.publication.config_elt](#).

Definition at line 310 of file `xml_utils.py`.

10.187.2.13 `def rpki.xml_utils.data_elt.toXML (self)`

Default element generator for SQL-based objects. This assumes that sub-elements are Base64-encoded DER objects.

Reimplemented from [rpki.xml_utils.base_elt](#).

Definition at line 239 of file `xml_utils.py`.

10.187.2.14 `def rpki.xml_utils.data_elt.unimplemented_control (self, controls)`

Uniform handling for unimplemented control operations.

Reimplemented in [rpki.left_right.data_elt](#).

Definition at line 373 of file `xml_utils.py`.

- [stack](#)
- [text](#)

10.189.1 Detailed Description

SAX handler for RPKI protocols.

This class provides some basic amenities for parsing protocol XML of the kind we use in the RPKI protocols, including whacking all the protocol element text into US-ASCII, simplifying accumulation of text fields, and hiding some of the fun relating to XML namespaces.

General assumption: by the time this parsing code gets invoked, the XML has already passed RelaxNG validation, so we only have to check for errors that the schema can't catch, and we don't have to play as many XML namespace games.

Definition at line 38 of file `xml_utils.py`.

10.189.2 Member Function Documentation

10.189.2.1 def `rpki.xml_utils.sax_handler.__init__` (*self*)

Initialize SAX handler.

Definition at line 53 of file `xml_utils.py`.

10.189.2.2 def rpki.xml_utils.sax_handler.characters (*self*, *content*)

Accumulate a chunk of element content (text).

Definition at line 69 of file xml_utils.py.

10.189.2.3 def rpki.xml_utils.sax_handler.create_top_level (*self*, *name*, *attrs*)

Handle top-level PDU for this protocol.

Definition at line 119 of file xml_utils.py.

10.189.2.4 def rpki.xml_utils.sax_handler.endElement (*self*, *name*)

Handle endElement() events. Mostly this means handling any accumulated element text.

Definition at line 101 of file xml_utils.py.

10.189.2.5 def rpki.xml_utils.sax_handler.endElementNS (*self*, *name*, *qname*)

Redirect endElementNS() events to endElement().

Definition at line 65 of file xml_utils.py.

10.189.2.6 def rpki.xml_utils.sax_handler.saxify (*cls*, *elt*)

Create a one-off SAX parser, parse an ETree, return the result.

Definition at line 111 of file xml_utils.py.

10.189.2.7 def rpki.xml_utils.sax_handler.startElement (self, name, attrs)

Handle startElement() events.

We maintain a stack of nested elements under construction so that we can feed events directly to the current element rather than having to pass them through all the nesting elements.

If the stack is empty, this event is for the outermost element, so we call a virtual method to create the corresponding object and that's the object we'll be returning as our final result.

Definition at line 73 of file xml_utils.py.

10.189.2.8 def rpki.xml_utils.sax_handler.startElementNS (self, name, qname, attrs)

Redirect startElementNS() events to startElement().

Definition at line 61 of file xml_utils.py.
