1 RPKI Engine Reference Manual

This collection of Python modules implements a prototype of the RPKI Engine. This is a work in progress.

See http://viewvc.hactrn.net/subvert-rpki.hactrn.net/ for

code, design documents, a text mirror of portions of APNIC's Wiki, etc.

The RPKI Engine is an implementation of the production-side tools for generating certificates, CRLs, and ROAs. The relying party tools are a separate (and much simpler) package.

The Subversion repository for the entire project is available for (read-only) anonymous access at http://subvert-rpki.hactrn.net/.

The documentation you're reading is generated automatically by Doxygen from comments and documentation in the code.

Besides the automatically-generated code documentation, this manual also includes documentation of the overall package:

- The installation instructions
- The operation instructions
- A description of the left-right protocol
- A description of the publication protocol
- A description of the BPKI model used to secure the up-down, left-right, and publication protocols
- A description of the several SQL database schemas
- Some suggestions for further reading

This work was funded from 2006 through 2008 by ARIN, in collaboration with the other Regional Internet Registries. Current work is funded by DHS.

2 Further Reading

If you're interested in this package you might also be interested in:

- The rcynic validation tool
- A live sample of rcynic's summary output
- APNIC's Wiki
- APNIC's project Trac instance

3 Installation Guide 3

3 Installation Guide

Preliminary installation instructions for rpkid et al.

These are the production-side RPKI tools, for Internet Registries (RIRs, LIRs, etc). See the "rcynic" program for relying party tools.

rpkid is a set of Python modules supporting generation and maintenance of resource certificates. Most of the code is in the rpkid/rpki/ directory. rpkid itself is a relatively small program that calls the library modules. There are several other programs that make use of the same libraries, as well as a collection of test programs.

At present the package is intended to be run out of its build directory. Setting up proper installation in a system area using the Python distutils package would likely not be very hard but has not yet been done.

Note that initial development of this code has been on FreeBSD, so installation will probably be easiest on FreeBSD.

Before attempting to build the package, you need to install any missing prerequisites. Note that the Python code requires Python version 2.5. rpkid et al are mostly self-contained, but do require a small number of external packages to run.

- If your Python installation does not already include the sources files needed to compile new Python extension modules, you will need to install whatever package does include those source files. The need for and name of this package varies from system to system. On FreeBSD, the base Python interpreter package includes the development sources; on at least some Linux distributions, you have to install a separate "python-devel" package or something similar. If you get compilation errors trying to build the POW code (below) and the error message says something about the file "Python.h" being missing, this is almost certainly your problem.
- http://codespeak.net/lxml/. lxml in turn requires the Gnome LibXML2 C libraries.
 - FreeBSD: /usr/ports/devel/py-lxml
 - Fedora: python-lxml.i386
 - Ubuntu: python-lxml
- http://sourceforge.net/projects/mysql-python/. MySQLdb in turn requires MySQL client and server. rpkid et al have been tested with MySQL 5.0 and 5.1.
 - FreeBSD: /usr/ports/databases/py-MySQLdb
 - Fedora: MySQL-python.i386
 - Ubuntu: python-mysqldb

3 Installation Guide 4

rpkid et al also make heavy use of a modified copy of the Python OpenSSL Wrappers (POW) package, but this copy has enough modifications and additions that it's included in the subversion tree.

The next step is to build the OpenSSL and POW binaries. At present the OpenSSL code is just a snapshot of the OpenSSL development sources, compiled with special options to enable RFC 3779 support that ISC wrote under previous contract to ARIN. The POW (Python OpenSSL Wrapper) library is an extended copy of the stock POW release.

To build these, cd to the top-level directory in the distribution and type "make".

```
$ cd $top
$ make
```

This should automatically build everything, in the right order, including staticly linking the POW extension module with the OpenSSL library to provide RFC 3779 support. If you get errors building POW, see the above discussion of Python development sources.

You will also need a MySQL installation. This code was developed using MySQL 5.1 and has been tested with MySQL 5.0 and 5.1.

The architecture is intended to support hardware signing modules (HSMs), but the code to support them has not been written.

At this point, you should have all the necessary software installed. You will probably want to test it. All tests should be run from the rpkid/ directory. The test suite requires a few more external packages, only one of which is Python code.

- http://pyyaml.org/. testpoke.py (an up-down protocol command line test client) and testbed.py (a test harness) use PyYAML.
 - FreeBSD: /usr/ports/devel/py-yaml
 - Ubuntu: python-yaml
- http://xmlsoft.org/XSLT/. Some of the test code uses xsltproc, from the Gnome LibXSLT package.
 - FreeBSD: /usr/ports/textproc/libxslt
 - Ubuntu: xsltproc
- http://w3m.sourceforge.net/. testbed.py uses w3m to display the summary output from rcynic. Nothing terrible will happen if w3m isn't available, testbed.py will just complain about it being missing and won't display rcynic's output.
 - FreeBSD: /usr/ports/www/w3m
 - Ubuntu: w3m

3 Installation Guide 5

Some of the tests require MySQL databases to store their data. To set up all the databases that the tests will need, run the SQL commands in rpkid/testbed.sql. The MySQL command line client is usually the easiest way to do this, eg:

```
$ cd $top/rpkid
$ mysql -u root -p <testbed.sql</pre>
```

To run the tests, run "make all-tests":

```
$ cd $top/rpkid
$ make all-tests
```

If nothing explodes, your installation is probably ok. Any Python backtraces in the output indicate a problem.

There's a last set of tools that only developers should need, as they're only used when modifying schemas or regenerating the documentation. These tools are listed here for completeness.

- http://www.doxygen.org/. Doxygen in turn pulls in several other tools, notably Graphviz, pdfLaTeX, and Ghostscript.
 - FreeBSD: /usr/ports/devel/doxygen
 - Ubuntu: doxygen
- http://lynx.isc.org/current/. The documentation build process uses xsltproc and Lynx to dump flat text versions of a few critical documentation pages.
 - FreeBSD: /usr/ports/www/lynx
 - Ubuntu: lynx
- http://www.thaiopensource.com/relaxng/trang.html. Trang is used to convert RelaxNG schemas from the human-readable "compact" form to the XML form that LibXML2 understands. Trang in turn requires Java.
 - FreeBSD: /usr/ports/textproc/trang
- http://search.cpan.org/dist/SQL-Translator/.
 SQL-Translator, also known as "SQL Fairy", includes code to parse an SQL schema and dump a description of it as Graphviz input. SQL Fairy in turn requires Perl.
 - FreeBSD: /usr/ports/databases/p5-SQL-Translator

4 Operation Guide

Preliminary operation instructions for rpkid et al.

These are the production-side RPKI tools, for Internet Registries (RIRs, LIRs, etc). See rcynic/README for relying party tools.

Warning:

rpkid is still in development, and the code changes more often than the handmaintained portions of this documentation. The following text was reasonably accurate at the time it was written but may be obsolete by the time you read it.

At present the package is intended to be run out of the rpkid/directory.

In addition to the library routines in the rpkid/rpki/ directory, the package includes the following programs:

- rpkid.py: The main RPKI engine daemon.
- pubd.py: The publication engine daemon.
- rootd.py: A separate daemon for handling the root of an RPKI certificate tree. This is essentially a stripped down version of rpkid with no SQL database, no left-right protocol implementation, and only the parent side of the up-down protocol. It's separate because the root is a special case in several ways and it was simpler to keep the special cases out of the main daemon.
- irdbd.py: A sample implementation of an IR database daemon. rpkid calls into this to perform lookups via the left-right protocol.
- irbe_cli.py: A command-line client for the left-right control protocol.
- cross_certify.py: A BPKI cross-certification tool.
- irbe-setup.py: An example of a script to set up the mappings between the IRDB and rpkid's own database, using the left-right control protocol.
- cronjob.py: A trivial HTTP client used to drive rpkid cron events.
- testbed.py: A test tool for running a collection of rpkid and irdb instances under common control, driven by a unified test script.
- testpoke.py: A simple client for the up-down protocol, mostly compatable with APNIC's rpki_poke.pl tool.

4.1 rpkid.py 7

Most of these programs take configuration files in a common format similar to that used by the OpenSSL command line tool. The test programs also take input in YAML format to drive the tests. Runs of the testbed.py test tool will generate a fairly complete set configuration files which may be useful as examples.

Basic operation consists of creating the appropriate MySQL databases, starting rpkid, pubd, rootd, and irdbd, using the left-right control protocol to set up rpkid's internal state, and setting up a cron job to invoke rpkid's cron action at regular intervals. All other operations should occur either as a result of cron events or as a result of incoming left-right and up-down protocol requests.

Note that the full event-driven model for rpkid hasn't yet been implemented. The design is intended to allow an arbitrary number of hosted RPKI engines to run in a single rpkid instance, but without the event-driven tasking model one must set up a separate rpkid instance for each hosted RPKI engine.

At present the daemon programs all run in foreground, that is, if one wants them to run in background one must do so manually, eg, using Bourne shell syntax:

```
$ python whatever.py &
$ echo >whatever.pid "$!"
```

All of the daemons use syslog. At present they all set LOG_PERROR, so all logging also goes to stderr.

4.1 rpkid.py

rpkid is the main RPKI engine daemon. Configuration of rpkid is a two step process: a config file to bootstrap rpkid to the point where it can speak using the left-right protocol, followed by dynamic configuration via the left-right protocol. In production use the latter stage would be handled by the IRBE stub; for test and develoment purposes it's handled by the irbe_cli.py command line interface or by the testbed.py test framework.

rpkid stores dynamic data in an SQL database, which must have been created for it, as explained in the installation guide.

The default config file is rpkid.conf, start rpkid with "-c filename" to choose a different config file. All options are in the section "[rpkid]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- startup-message: String to log on startup, useful when debugging a collection of rpkid instances at once.
- sql-username: Username to hand to MySQL when connecting to rpkid's database.

4.2 pubd.py 8

- sql-database: MySQL's database name for rpkid's database.
- sql-password: Password to hand to MySQL when connecting to rpkid's database.
- bpki-ta: Name of file containing BPKI trust anchor. All BPKI certificate verification within rpkid traces back to this trust anchor.
- rpkid-cert: Name of file containing rpkid's own BPKI EE certificate.
- rpkid-key: Name of file containing RSA key corresponding to rpkid-cert.
- irbe-cert: Name of file containing BPKI certificate used by IRBE when talking to rpkid.
- irdb-cert: Name of file containing BPKI certificate used by irdbd.
- irdb-url: Service URL for irdbd. Must be a https:// URL.
- server-host: Hostname or IP address on which to listen for HTTPS connections. Current default is INADDR_ANY (IPv4 0.0.0.0); this will need to be hacked to support IPv6 for production.
- server-port: TCP port on which to listen for HTTPS connections.

4.2 pubd.py

pubd is the publication daemon. It implements the server side of the publication protocol, and is used by rpkid to publish the certificates and other objects that rpkid generates.

pubd is separate from rpkid for two reasons:

- The hosting model allows entities which choose to run their own copies of rpkid
 to publish their output under a common publication point. In general, encouraging shared publication services where practical is a good thing for relying parties,
 as it will speed up rcynic synchronization time.
- The publication server has to run on (or at least close to) the publication point itself, which in turn must be on a publically reachable server to be useful. rpkid, on the other hand, need only be reachable by the IRBE and its children in the RPKI tree. rpkid is a much more complex piece of software than pubd, so in some situations it might make sense to wrap tighter firewall constraints around rpkid than would be practical if rpkid and pubd were a single program.

4.3 rootd.py 9

pubd stores dynamic data in an SQL database, which must have been created for it, as explained in the installation guide. pubd also stores the published objects themselves as disk files in a configurable location which should correspond to an appropriate module definition in rsync.conf.

The default config file is pubd.conf, start pubd with "-c filename" to choose a different config file. ALl options are in the section "[pubd]". Certifiates, keys, and trust anchors may be either DER or PEM format.

Config file options:

- sql-username: Username to hand to MySQL when connecting to pubd's database.
- sql-database: MySQL's database name for pubd's database.
- sql-password: Password to hand to MySQL when connecting to pubd's database.
- bpki-ta: Name of file containing master BPKI trust anchor for pubd. All BPKI validation in pubd traces back to this trust anchor.
- irbe-cert: Name of file containing BPKI certificate used by IRBE when talking to pubd.
- pubd-cert: Name of file containing BPKI certificate used by pubd.
- pubd-key: Name of file containing RSA key corresponding to pubd-cert.
- server-host: Hostname or IP address on which to listen for HTTPS connections. Current default is INADDR_ANY (IPv4 0.0.0.0); this will need to be hacked to support IPv6 for production.
- server-port: TCP port on which to listen for HTTPS connections.
- publication—base: Path to base of filesystem tree where pubd should store publishable objects. Default is "publication/".

4.3 rootd.py

rootd is a stripped down implmentation of (only) the server side of the up-down protocol. It's a separate program because the root certificate of an RPKI certificate tree requires special handling and may also require a special handling policy. rootd is a

4.3 rootd.py 10

simple implementation intended for test use, it's not suitable for use in a production system. All configuration comes via the config file.

The default config file is rootd.conf, start rootd with "-c filename" to choose a different config file. All options are in the section "[rootd]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- bpki-ta: Name of file containing BPKI trust anchor. All BPKI certificate validation in rootd traces back to this trust anchor.
- rootd-bpki-cert: Name of file containing rootd's own BPKI certificate.
- rootd-bpki-key: Name of file containing RSA key corresponding to rootdbpki-cert.
- rootd-bpki-crl: Name of file containing BPKI CRL that would cover rootd-bpki-cert had it been revoked.
- child-bpki-cert: Name of file containing BPKI certificate for rootd's one and only child (RPKI engine to which rootd issues an RPKI certificate).
- server-host: Hostname or IP address on which to listen for HTTPS connections. Default is localhost.
- server-port: TCP port on which to listen for HTTPS connections.
- rpki-root-key: Name of file containing RSA key to use in signing resource certificates.
- rpki-root-cert: Name of file containing self-signed root resource certificate corresponding to rpki-root-key.
- rpki-root-dir: Name of directory where rootd should write RPKI subject certificate, manifest, and CRL.
- rpki-subject-cert: Name of file that rootd should use to save the one and only certificate it issues. Default is "Subroot.cer".
- rpki-root-crl: Name of file to which rootd should save its RPKI CRL.
 Default is "Root.crl".
- rpki-root-manifest: Name of file to which rootd should save its RPKI manifest. Default is "Root.mnf".

4.4 irdbd.py 11

• rpki-subject-pkcs10: Name of file that rootd should use when saving a copy of the received PKCS #10 request for a resource certificate. This is only used for debugging. Default is not to save the PKCS #10 request.

4.4 irdbd.py

irdbd is a sample implementation of the server side of the IRDB callback subset of the left-right protocol. In production use this service is a function of the IRBE stub; irdbd may be suitable for production use in simple cases, but an IR with a complex IRDB may need to extend or rewrite irdbd.

irdbd requires a pre-populated database to represent the IR's customers. irdbd expects this database to use the SQL schema defined in rpkid/irdbd.sql. Once this database has been populated, the IRBE stub needs to create the appropriate objects in rpkid's database via the control subset of the left-right protocol, and store the linkage IDs (foreign keys into rpkid's database, basicly) in the IRDB. The irbe-setup.py program shows an example of how to do this.

irdbd's default config file is irdbd.conf, start irdbd with "-c filename" to choose a different config file. All options are in the section "[irdbd]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- startup-message: String to log on startup, useful when debugging a collection of irdbd instances at once.
- sql-username: Username to hand to MySQL when connecting to irdbd's database.
- sql-database: MySQL's database name for irdbd's database.
- sql-password: Password to hand to MySQL when connecting to irdbd's database.
- bpki-ta: Name of file containing BPKI trust anchor. All BPKI certificate validation in irdbd traces back to this trust anchor.
- irdbd-cert: Name of file containing irdbd's own BPKI certificate.
- irdbd-key: Name of file containing RSA key corresponding to irdbd-cert.
- rpkid-cert: Name of file containing certificate used the one and only by rpkid instance authorized to contact this irdbd instance.
- https-url: Service URL for irdbd. Must be a https:// URL.

4.5 irbe_cli.py

irbe_cli is a simple command line client for the control subsets of the left-right and publication protocols. In production use this functionality would be part of the IRBE stub.

Basic configuration of irbe_cli is handled via a config file. The specific action or actions to be performed are specified on the command line, and map closely to the protocols themselves.

At present the user is assumed to be able to read the (XML) left-right and publication protocol messages, and with one exception, irdbd-cli makes no attempt to interpret the responses other than to check for signature and syntax errors. The one exception is that, if the <code>--pem_out</code> option is specified on the command line, any PKCS #10 requests received from rpkid will be written in PEM format to that file; this makes it easier to hand these requests off to the business PKI (BPKI in order to issue signing certs corresponding to newly generated business keys.

```
Command line IR back-end control program for rpkid and pubd.

    --bpki glue=
config --action= --tag= --bpki_crl=
crl --action= --tag= --client_handle= --uri=
```

Global options (--config, --help, --pem_out) come first, then zero or more commands (parent, repository, self, child, bsc, config, client), each followed by its own set of options. The commands map to elements in the protocols, and the command-specific options map to attributes or subelements for those commands.

--tag is an optional arbitrary tag (think IMAP) to simplify matching up replies with batched queries.

```
--*_handle options refer to object primary keys.
```

The remaining options are specific to the particular commands, and follow directly from the protocol specifications.

A trailing "=" in the above option summary indicates that an option takes a value, eg, "--action create" or "--action=create". Options without a trailing "=" correspond to boolean control attributes.

The default config file for irbe_cli is irbe_cli.conf, start irbe_cli with "-c filename" (or "--config filename") to choose a different config file. All options are in the section "[irbe_cli]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

• rpkid-bpki-ta: Name of file containing BPKI trust anchor to use when authenticating messages from rpkid.

- rpkid-irbe-cert: Name of file containing BPKI certificate irbe_cli should use when talking to rpkid.
- rpkid-irbe-key: Name of file containing RSA key corresponding to rpkidirbe-cert.
- rpkid-cert: Name of file containing rpkid's BPKI certificate.
- rpkid-url: Service URL for rpkid. Must be a https:// URL.
- pubd-bpki-ta: Name of file containing BPKI trust anchor to use when authenticating messages from pubd.
- pubd-irbe-cert: Name of file containing BPKI certificate irbe_cli should use when talking to pubd.
- pubd-irbe-key: Name of file containing RSA key corresponding to pubdirbe-cert.
- pubd-cert: Name of file containing pubd's BPKI certificate.
- pubd-url: Service URL for pubd. Must be a https:// URL.

4.6 cross_certify.py

cross_certify.py is a small tool to extract certain fields from an existing X.509 certificate and generate issue a new certificate that can be used as part of a cross-certification chain. cross_certify doesn't take a config file, all of its arguments are specified on the command line.

4.7 irbe-setup.py config file

Warning:

irbe-setup is old code, not currently used, kept in case it is useful at some later date. It may not work properly or at all. If you don't understand what it does, you don't need it. You have been warned.

The default config file is irbe.conf, start rpkid with "-c filename" to choose a different config file. Most options are in the section "[irbe_cli]", but a few are in the section "[irdbd]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Options in the "[irbe_cli]" section:

- bpki-ta: Name of file containing BPKI trust anchor.
- irbe-cert: Name of file containing BPKI certificate irbe-setup should use.
- irbe-key: Name of file containing RSA key corresponding to irbe-cert.
- rpkid-cert: Name of file containing rpkid's BPKI certificate.
- https-url: Service URL for rpkid. Must be a https:// URL.

Options in the "[irdbd]" section:

- sql-username: Username to hand to MySQL when connecting to irdbd's database.
- sql-database: MySQL's database name for irdbd's database.
- sql-password: Password to hand to MySQL when connecting to irdbd's database.

4.8 cronjob.py

This is a trivial program to trigger a cron run within rpkid. Once rpkid has been converted to the planned event-driven model, this function will be handled internally, but for now it has to be triggered by an external program. For pseudo-production use one would run this program under the system cron daemon. For scripted testing it happens to be useful to be able to control when cron cycles occur, so at the current stage of code development use of an external trigger is a useful feature.

The default config file is cronjob.conf, start cronjob with "-c filename" to choose a different config file. All options are in the section "[cronjob]". Certificates, keys, and trust anchors may be in either DER or PEM format.

Config file options:

- bpki-ta: Name of file containing BPKI trust anchor.
- irbe-cert: Name of file containing cronjob.py's BPKI certificate.

- https-key: Name of file containing RSA key corresponding to irbe-cert.
- rpkid-cert: Name of file containing rpkid's BPKI certificate.
- https-url: Service URL for rpkid. Must be a https:// URL.

4.9 testbed.py:

testbed is a test harness to set up and run a collection of rpkid and irdbd instances under scripted control. testbed is a very recent addition to the toolset and is still evolving rapidly.

Unlike the programs described above, testbed takes two configuration files in different languages. The first configuration file uses the same syntax as the above configuration files but is completely optional. The second configuration file is the test script, which is encoded using the YAML serialization language (see http://www.yaml.org/for more information on YAML). The YAML script is not optional, as it describes the test layout. testbed is designed to support running a fairly wide set of test configurations as canned scripts without writing any new control code. The intent is to make it possible to write meaningful regression tests.

All of the options in in the first (optional) configuration file are just overrides for wired-in default values. In most cases the defaults will suffice, and the set of options is still in flux, so only a few of the options are described here. The default name for this configuration file is testbed.conf, run testbed with "-c filename" to change it.

testbed.conf options:

- testbed_dir: Working directory into which testbed should write the (many) files it generates. Default is "testbed.dir".
- irdb_db_pass: MySQL password for the "irdb" user. Default is "fnord". You may want to override this.
- rpki_db_pass: MySQL password for the "rpki" user. Default is "fnord". You may want to override this.
- rootd_sia: rsync URI naming a (perhaps fictious) directory to use as the id-ad-caRepository SIA value in the generated root resource certificate. Default is "rsync://wombat.invalid/". You may want to override this if you intend to run an rsync server and test against the generated results using rcynic. This default will likely change if and when testbed learns how to run rcynic itself as part of the test suite.

The second configuration file is named testbed.yaml by default, run testbed with "-y filename" to change it. The YAML file contains multiple YAML "documents". The

first document describes the initial test layout and resource allocations, subsequent documents describe modifications to the initial allocations and other parameters. Resources listed in the initial layout are aggregated automatically, so that a node in the resource hierarchy automatically receives the resources it needs to issue whatever its children are listed as holding. Actions in the subsequent documents are modifications to the current resource set, modifications to validity dates or other non-resource parameters, or special commands like "sleep". The details are still evolving, but here's an example of current usage:

```
name:
                RIR
valid_for:
                2d
             2d
"rsync://wombat.invalid/"
sia base:
kids:
 - name: LIR0
kids:
   - name: Alice
    ipv4: 192.0.2.1-192.0.2.33
    asn: 64533
- name: Alice
 valid_add:
               1.0
- name: Alice
 add as: 33
 valid_add:
- name: Alice
 valid_sub:
- name: Alice
 valid for:
               10d
```

This specifies an initial layout consisting of an RPKI engine named "RIR", with one child "LIR0", which in turn has one child "Alice". Alice has a set of assigned resources, and all resources in the system are initially set to be valid for two days from the time at which the test is started. The first subsequent document adds ten seconds to the validity interval for Alice's resources and makes no other modifications. The second subsequent document grants Alice additional resources and adds another two days to the validity interval for Alice's resources. The next document subtracts two days from the validity interval for Alice's resources. The final document sets the validity interval for Alice's resources to ten days.

Operators in subsequent (update) documents:

- add_as, add_v4, add_v6: These add ASN, IPv4, or IPv6 resources, respectively.
- sub_as, sub_v4, sub_v6: These subtract resources.
- valid_until: Set an absolute expiration date.

- valid_for: Set a relative expiration date.
- valid_add, valid_sub: Add to or subtract from validity interval.
- sleep [interval]: Sleep for specified interval, or until testbed receives a SIGALRM signal.

Absolute timestamps should be in the form shown (UTC timestamp format as used in XML).

Intervals (valid_add, valid_sub, valid_for, sleep) are either integers, in which case they're interpreted as seconds, or are a string of the form "wD xH yM zS" where w, x, y, and z are integers and D, H, M, and S indicate days, hours, minutes, and seconds. In the latter case all of the fields are optional, but at least one must be specified. For example, "3D4H" means "three days plus four hours".

4.10 testpoke.py

This is a command-line client for the up-down protocol. Unlike all of the above programs, testpoke does not accept a config file in OpenSSL-compatable format at all. Instead, it is configured exclusively by a YAML script. testpoke's design was constrained by a desire to have it be compatable with APNIC's rpki_poke.pl tool, so that the two tools could use a common configuration language to simplify scripted testing. There are minor variations due to slightly different feature sets, but YAML files intended for one program will usually work with the other.

README for APNIC's tool describing the input language can be found at http://mirin.apnic.net/svn/rpki_-engine/branches/gary-poker/client/poke/README.

testpoke.py takes a simplified command line and uses only one YAML input file.

Default configuration file is testpoke.yaml, override with --yaml option.

The --request option specifies the specific command within the YAML file to execute. Sample configuration file:

```
# Sample YAML configuration file for testpoke.py
version: 1
posturl: https://localhost:4433/up-down/1
```

```
recipient-id: wombat
sender-id: "1"
cms-cert-file: biz-certs/Frank-EE.cer
cms-key-file: biz-certs/Frank-EE.key
cms-ca-cert-file: biz-certs/Bob-Root.cer
cms-cert-chain-file: [ biz-certs/Frank-CA.cer ]
ssl-cert-file: biz-certs/Frank-EE.cer
ssl-key-file: biz-certs/Frank-EE.key
ssl-ca-cert-file: biz-certs/Bob-Root.cer
requests:
 list:
type: list
  issue:
type: issue
class: 1
sia: [ "rsync://bandicoot.invalid/some/where/" ]
 revoke:
type: revoke
class: 1
ski: "CB5K6APY-4KcGAW9jaK_cVPXKX0"
```

testpoke adds one extension to the language described in APNIC's README: the cms-cert-chain-* and ssl-cert-chain-* options, which allow one to specify a chain of intermediate certificates to be presented in the CMS or TLS protocol. APNIC's initial implementation required direct knowledge of the issuing certificate (ie, it supported a maximum chain length of one); subsequent APNIC code changes have probably relaxed this restriction, and with luck APNIC has copied testpoke's syntax to express chains of intermediate certificates.

5 Left-right protocol

The left-right protocol is really two separate client/server protocols over separate channels between the RPKI engine and the IR back end (IRBE).

The IRBE is the client for one of the subprotocols, the RPKI engine is the client for the other.

5.1 Terminology

- IRBE: Internet Registry Back End
- IRDB: Internet Registry Data Base
- BPKI: Business PKI

• RPKI: Resource PKI

5.2 initiated by the IRBE

This part of the protool uses a kind of message-passing. Each object that the RPKI engine knows about takes five messages: "create", "set", "get", "list", and "destroy". Actions which are not just data operations on objects are handled via an SNMP-like mechanism, as if they were fields to be set. For example, to generate a keypair one "sets" the "generate-keypair" field of a BSC object, even though there is no such field in the object itself as stored in SQL. This is a bit of a kludge, but the reason for doing it as if these were variables being set is to allow composite operations such as creating a BSC, populating all of its data fields, and generating a keypair, all as a single operation. With this model, that's trivial, otherwise it's at least two round trips.

Fields can be set in either "create" or "set" operations, the difference just being whether the object already exists. A "get" operation returns all visible fields of the object. A "list" operation returns a list containing what "get" would have returned on each of those objects.

Left-right protocol objects are encoded as signed CMS messages containing XML as eContent and using an eContentType OID of id-ct-xml (1.2.840.113549.1.9.16.1.28). These CMS messages are in turn passed as the data for HTTPS POST operations, with an HTTP content type of "application/x-rpki" for both the POST data and the response data.

All operations allow an optional "tag" attribute which can be any alphanumeric token. The main purpose of the tag attribute is to allow batching of multiple requests into a single PDU.

5.2.1 <**self/> object**

A <self/> object represents one virtual RPKI engine. In simple cases where the RPKI engine operator operates the engine only on their own behalf, there will only be one <self/> object, representing the engine operator's organization, but in environments where the engine operator hosts other entities, there will be one <self/> object per hosted entity (probably including the engine operator's own organization, considered as a hosted customer of itself).

Some of the RPKI engine's configured parameters and data are shared by all hosted entities, but most are tied to a specific <self/> object. Data which are shared by all hosted entities are referred to as "per-engine" data, data which are specific to a particular <self/> object are "per-self" data.

Since all other RPKI engine objects refer to a <self/> object via a "self_handle" value, one must create a <self/> object before one can usefully configure any other left-right protocol objects.

Every <self/> object has a self_handle attribute, which must be specified for the "create", "set", "get", and "destroy" actions.

Payload data which can be configured in a <self/> object:

- use_hsm (attribute): Whether to use a Hardware Signing Module. At present this option has no effect, as the implementation does not yet support HSMs.
- crl_interval (attribute): Positive integer representing the planned lifetime
 of an RPKI CRL for this <self/>, measured in seconds.
- regen_margin (attribute): Positive integer representing how long before expiration of an RPKI certificiate a new one should be generated, measured in seconds. At present this only affects the one-off EE certificates associated with ROAs.
- bpki_cert (element): BPKI CA certificate for this <self/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages, and should be the issuer of cross-certification BPKI certificates used in <repository/>, <parent/>, and <child/> objects. If the bpki_glue certificate is in use (below), the bpki_cert certificate should be issued by the bpki_glue certificate; otherwise, the bpki_cert certificate should be issued by the per-engine bpki_ta certificate.
- bpki_glue (element): Another BPKI CA certificate for this <self/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the bpki_glue certificate should be the issuer of the bpki_cert certificate and should be issued by the perengine bpki_ta certificate; if not needed, the bpki_glue certificate should be left unset.

Control attributes that can be set to "yes" to force actions:

- revoke: Revoke any remaining certificates for any expired key associated with any RPKI CA for any <parent/> object associated with this <self/> object. This is the second (cleanup) phase for a key rollover operation; it's separate from the first phase to leave time for new RPKI certificates to propegate and be installed.
- reissue: Not implemented, may be removed from protocol. Original theory was that this operation would force reissuance of any object with a changed key,

but as that happens automatically as part of the key rollover mechanism this operation seems unnecessary.

- run_now: Force immediate processing for all tasks associated with this <self/> object that would ordinarily be performed under cron. Not currently implemented.
- publish_world_now: Force (re)publication of every publishable object for this <self/> object. Not currently implemented. Intended to aid in recovery if RPKI engine and publication engine somehow get out of sync.

5.2.2 <bsc/> object

The <bsc/> ("business signing context") object represents all the BPKI data needed to sign outgoing CMS or HTTPS messages. Various other objects include pointers to a <bsc/> object. Whether a particular <self/> uses only one <bsc/> or multiple is a configuration decision based on external requirements: the RPKI engine code doesn't care, it just cares that, for any object representing a relationship for which it must sign messages, there be a <bsc/> object that it can use to produce that signature.

Every
bsc/> object has a bsc_handle, which must be specified for the "create", "get", "set", and "destroy" actions. Every
bsc/> also has a self_handle attribute which indicates the <self/> object with which this
bsc/> object is associated.

Payload data which can be configured in a <isc/> object:

- signing_cert (element): BPKI certificate to use when generating a signature.
- signing_cert_crl (element): CRL which would list signing_cert if it had been revoked.

Control attributes that can be set to "yes" to force actions:

• generate_keypair: Generate a new BPKI keypair and return a PKCS #10 certificate request. The resulting certificate, once issued, should be configured as this

bsc/> object's signing_cert.

Additional attributes which may be specified when specifying "generate_keypair":

• key_type: Type of BPKI keypair to generate. "rsa" is both the default and, at the moment, the only allowed value.

- hash_alg: Cryptographic hash algorithm to use with this keypair. "sha256" is both the default and, at the moment, the only allowed value.
- key_length: Length in bits of the keypair to be generated. "2048" is both the default and, at the moment, the only allowed value.

Replies to "create" and "set" actions that specify "generate-keypair" include a <bsc_pkcs10/> element, as do replies to "get" and "list" actions for a <bsc/> object for which a "generate-keypair" command has been issued. The RPKI engine stores the PKCS #10 request, which allows the IRBE to reuse the request if and when it needs to reissue the corresponding BPKI signing certificate.

5.2.3 <parent/> object

Payload data which can be configured in a <parent/> object:

- peer_contact_uri (attribute): HTTPS URI used to contact this parent.
- sia_base (attribute): The leading portion of an rsync URI that the RPKI engine should use when composing the publication URI for objects issued by the RPKI certificate issued by this parent.
- sender_name (attribute): Sender name to use in the up-down protocol when talking to this parent. The RPKI engine doesn't really care what this value is, but other implementations of the up-down protocol do care.
- recipient_name (attribute): Recipient name to use in the up-down protocol when talking to this parent. The RPKI engine doesn't really care what this value is, but other implementations of the up-down protocol do care.

- bpki_cms_cert (element): BPKI CMS CA certificate for this <parent/>.
 This is used as part of the certificate chain when validating incoming CMS messages If the bpki_cms_glue certificate is in use (below), the bpki_cms_cert certificate should be issued by the bpki_cms_glue certificate; otherwise, the bpki_cms_cert certificate should be issued by the bpki_cert certificate in the <self/> object.
- bpki_cms_glue (element): Another BPKI CMS CA certificate for this <parent/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the bpki_cms_glue certificate should be the issuer of the bpki_cms_cert certificate and should be issued by the bpki_cert certificate in the <self/> object; if not needed, the bpki_cms_glue certificate should be left unset.
- bpki_https_cert (element): BPKI HTTPS CA certificate for this <parent/>. This is like the bpki_cms_cert object, only used for validating incoming TLS messages rather than CMS.
- bpki_cms_glue (element): Another BPKI HTTPS CA certificate for this <parent/>, usually not needed. This is like the bpki_cms_glue certificate, only used for validating incoming TLS messages rather than CMS.

Control attributes that can be set to "yes" to force actions:

- rekey: This is like the rekey command in the <self/> object, but limited to RPKI CAs under this parent.
- reissue: This is like the reissue command in the <self/> object, but limited to RPKI CAs under this parent.
- revoke: This is like the revoke command in the <self/> object, but limited to RPKI CAs under this parent.

5.2.4 <child/> object

The <child/> object represents the RPKI engine's view of particular child of the current <self/> in the up-down protocol.

Every <child/> object has a child_handle, which must be specified for the "create", "get", "set", and "destroy" actions. Every <child/> also has a self_handle attribute which indicates the <self/> object with which this <child/> object is associated.

Payload data which can be configured in a <child/> object:

- bpki_cert (element): BPKI CA certificate for this <child/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages. If the bpki_glue certificate is in use (below), the bpki_cert certificate should be issued by the bpki_glue certificate; otherwise, the bpki_cert certificate should be issued by the bpki_cert certificate in the <self/> object.
- bpki_glue (element): Another BPKI CA certificate for this <child/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the bpki_glue certificate should be the issuer of the bpki_cert certificate and should be issued by the bpki_cert certificate in the <self/> object; if not needed, the bpki_glue certificate should be left unset.

Control attributes that can be set to "yes" to force actions:

• reissue: Not implemented, may be removed from protocol.

5.2.5 <repository/> object

The <repository/> object represents the RPKI engine's view of a particular publication repository used by the current <self/> object.

Every <repository/> object has a repository_handle, which must be specified
for the "create", "get", "set", and "destroy" actions. Every <repository/> also
has a self_handle attribute which indicates the <self/> object with which this
<repository/> object is associated.

- peer_contact_uri (attribute): HTTPS URI used to contact this repository.
- bpki_cms_cert (element): BPKI CMS CA certificate for this <repository/>. This is used as part of the certificate chain when validating incoming CMS messages If the bpki_cms_glue certificate is in use (below), the bpki_cms_cert certificate should be issued by the bpki_cms_glue certificate; otherwise, the bpki_cms_cert certificate should be issued by the bpki_cert certificate in the <self/> object.
- bpki_cms_glue (element): Another BPKI CMS CA certificate for this <repository/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the bpki_cms_glue certificate should be the issuer of the bpki_cms_cert certificate and should be issued by the bpki_cert certificate in the <self/> object; if not needed, the bpki_cms_glue certificate should be left unset.

- bpki_https_cert (element): BPKI HTTPS CA certificate for this <repository/>. This is like the bpki_cms_cert object, only used for validating incoming TLS messages rather than CMS.
- bpki_cms_glue (element): Another BPKI HTTPS CA certificate for this <repository/>, usually not needed. This is like the bpki_cms_glue certificate, only used for validating incoming TLS messages rather than CMS.

At present there are no control attributes for <repository/> objects.

5.2.6 < route origin/> object

The <route_origin/> object is a kind of prototype for a ROA. It contains all the information needed to generate a ROA once the RPKI engine obtains the appropriate RPKI certificates from its parent(s).

Note that a <route_origin/> object represents a ROA to be generated on behalf of <self/>, not on behalf of a <child/>. Thus, a hosted entity that has no children but which does need to generate ROAs would be represented by a hosted <self/> with no <child/> objects but one or more <route_origin/> objects. While lumping ROA generation in with the other RPKI engine activities may seem a little odd at first, it's a natural consequence of the design requirement that the RPKI daemon never transmit private keys across the network in any form; given this requirement, the RPKI engine that holds the private keys for an RPKI certificate must also be the engine which generates any ROAs that derive from that RPKI certificate.

The precise content of the <route_origin/> has changed over time as the underlying ROA specification has changed. The current implementation as of this writing matches what we expect to see in draft-ietf-sidr-roa-format-03, once it is issued. In particular, note that the exactMatch boolean from the -02 draft has been replaced by the prefix and maxLength encoding used in the -03 draft.

Payload data which can be configured in a <route_origin/> object:

- asn (attribute): Autonomous System Number (ASN) to place in the generated ROA. A single ROA can only grant authorization to a single ASN; multiple ASNs require multiple ROAs, thus multiple croute_origin/> objects.
- ipv4 (attribute): List of IPv4 prefix and maxLength values, see below for format.
- ipv6 (attribute): List of IPv6 prefix and maxLength values, see below for format.

Control attributes that can be set to "yes" to force actions:

suppress_publication: Not implemented, may be removed from protocol.

The lists of IPv4 and IPv6 prefix and maxLength values are represented as commaseparated text strings, with no whitespace permitted. Each entry in such a string represents a single prefix/maxLength pair.

ABNF for these address lists:

For example, "10.0.1.0/24-32, 10.0.2.0/24", which is a shorthand form of "10.0.1.0/24-32, 10.0.2.0/24-24".

5.3 Operations initiated by the RPKI engine

The left-right protocol also includes queries from the RPKI engine back to the IRDB. These queries do not follow the message-passing pattern used in the IRBE-initiated part of the protocol. Instead, there's a single query back to the IRDB, with a corresponding response. The CMS and HTTPS encoding are the same as in the rest of the protocol, but the BPKI certificates will be different as the back-queries and responses form a separate communication channel.

5.3.1 < list resources/> messages

The <list_resources/> query and response allow the RPKI engine to ask the IRDB for information about resources assigned to a particular child. The query must include both a "self_handle" attribute naming the <self/> that is making the request and also a "child_handle" attribute naming the child that is the subject of the query. The query and response also allow an optional "tag" attribute of the same form used elsewhere in this protocol, to allow batching.

A list_resources/> response includes the following attributes, along with the tag (if specified), self_handle, and child_handle copied from the request:

• valid_until: A timestamp indicating the date and time at which certificates generated by the RPKI engine for these data should expire. The timestamp is

expressed as an XML xsd:dateTime, must be expressed in UTC, and must carry the "Z" suffix indicating UTC.

- asn: A list of autonomous sequence numbers, expressed as a comma-separated sequence of decimal integers with no whitespace.
- ipv4: A list of IPv4 address prefixes and ranges, expressed as a commaseparated list of prefixes and ranges with no whitespace. See below for format details.
- ipv6: A list of IPv6 address prefixes and ranges, expressed as a commaseparated list of prefixes and ranges with no whitespace. See below for format details.

Entries in a list of address prefixes and ranges can be either prefixes, which are written in the usual address/prefixlen notation, or ranges, which are expressed as a pair of addresses denoting the beginning and end of the range, written in ascending order separated by a single "-" character. This format is superficially similar to the format used for prefix and maxLength values in the <route_origin/> object, but the semantics differ: note in particular that <route_origin/> objects don't allow ranges, while list_resources/> messages don't allow a maxLength specification.

5.4 Error handling

Error in this protocol are handled at two levels.

Since all messages in this protocol are conveyed over HTTPS connections, basic errors are indicated via the HTTP response code. 4xx and 5xx responses indicate that something bad happened. Errors that make it impossible to decode a query or encode a response are handled in this way.

Where possible, errors will result in a <report_error/> message which takes the place of the expected protocol response message. <report_error/> messages are CMS-signed XML messages like the rest of this protocol, and thus can be archived to provide an audit trail.

<report_error/> messages only appear in replies, never in queries. The
<report_error/> message can appear on either the "forward" (IRBE as client
of RPKI engine) or "back" (RPKI engine as client of IRDB) communication channel.

The <report_error/> message includes an optional "tag" attribute to assist in matching the error with a particular query when using batching, and also includes a "self_handle" attribute indicating the <self/> that issued the error.

The error itself is conveyed in the error_code (attribute). The value of this attribute is a token indicating the specific error that occurred. At present this will be the name of

a Python exception; the production version of this protocol will nail down the allowed error tokens here, probably in the RelaxNG schema.

The body of the <report_error/> element itself is an optional text string; if present, this is debugging information. At present this capability is not used, debugging information goes to syslog.

6 Publication protocol

The publication protocol is really two separate client/server protocols, between different parties.

The first is a configuration protocol for an IRBE to use to configure a publication engine, the second is the interface by which authorized clients request publication of specific objects.

Much of the architecture of the publication protocol is borrowed from the left-right protocol: like the left-right protocol, the publication protocol uses CMS-wrapped XML over HTTPS with the same eContentType OID and the same HTTPS content-type, and the overall style of the XML messages is very similar to the left-right protocol. All operations allow an optional "tag" attribute to allow batching.

The publication engine operates a single HTTPS server which serves both of these subprotocols. The two subprotocols share a single server port, but use distinct URLs to allow demultiplexing.

6.1 Terminology

• IRBE: Internet Registry Back End

• IRDB: Internet Registry Data Base

• BPKI: Business PKI

• RPKI: Resource PKI

6.2 Publication control subprotocol

The control subprotocol reuses the message-passing design of the left-right protocol. Configured objects support the "create", "set", "get", "list", and "destroy" actions, or a subset thereof when the full set of actions doesn't make sense.

6.2.1 <config/> object

The <config/> object allows configuration of data that apply to the entire publication server rather than a particular client.

There is exactly one <config/> object in the publication server, and it only supports the "set" and "get" actions -- it cannot be created or destroyed.

Payload data which can be configured in a <config/> object:

• bpki_crl (element): This is the BPKI CRL used by the publication server when signing the CMS wrapper on responses in the publication subprotocol. As the CRL must be updated at regular intervals, it's not practical to restart the publication server when the BPKI CRL needs to be updated. The BPKI model doesn't require use of a BPKI CRL between the IRBE and the publication server, so we can use the publication control subprotocol to update the BPKI CRL.

6.2.2 <cli>object

The <cli>ent/> object represents one client authorized to use the publication server.

The <cli>client/> object supports the full set of "create", "set", "get", "list", and "destroy" actions. Each client has a "client_handle" attribute, which is used in responses and must be specified in "create", "set", "get", or "destroy" actions.

Payload data which can be configured in a <client/> object:

- base_uri (attribute): This is the base URI below which this client is allowed to publish data. The publication server may impose additional constraints in the case of a child publishing beneath its parent.
- bpki_cert (element): BPKI CA certificate for this <client/>. This is used as part of the certificate chain when validating incoming TLS and CMS messages. If the bpki_glue certificate is in use (below), the bpki_cert certificate should be issued by the bpki_glue certificate; otherwise, the bpki_cert certificate should be issued by the publication engine's bpki_ta certificate.
- bpki_glue (element): Another BPKI CA certificate for this <client/>, usually not needed. Certain pathological cross-certification cases require a two-certificate chain due to issuer name conflicts. If used, the bpki_glue certificate should be the issuer of the bpki_cert certificate and should be issued by the publication engine's bpki_ta certificate; if not needed, the bpki_glue certificate should be left unset.

6.3 Publication subprotocol

The publication subprotocol is structured somewhat differently from the publication control protocol. Objects in the publication subprotocol represent objects to be published or objects to be withdrawn from publication. Each kind of object supports two actions: "publish" and "withdraw". In each case the XML element representing hte object to be published or withdrawn has a "uri" attribute which contains the publication URI. For "publish" actions, the XML element body contains the DER object to be published, encoded in Base64; for "withdraw" actions, the XML element body is empty.

In theory, the detailed access control for each kind of object might be different. In practice, as of this writing, access control for all objects is a simple check that the client's "base_uri" is a leading substring of the publication URI. Details of why access control might need to become more complicated are discussed in a later section.

6.3.1 <certificate/> object

The <certificate/> object represents an RPKI certificate to be published or withdrawn.

6.3.2 <crl/> object

The <crl/> object represents an RPKI CRL to be published or withdrawn.

6.3.3 <manifest/> object

The <manifest/> object represents an RPKI publication manifest to be published or withdrawn.

Note that part of the reason for the batching support in the publication protocol is because *every* publication or withdrawal action requires a new manifest, thus every publication or withdrawal action will involve at least two objects.

6.3.4 <roa/> object

The <roa/> object represents a ROA to be published or withdrawn.

6.4 Error handling

Error in this protocol are handled at two levels.

Since all messages in this protocol are conveyed over HTTPS connections, basic errors are indicated via the HTTP response code. 4xx and 5xx responses indicate that

something bad happened. Errors that make it impossible to decode a query or encode a response are handled in this way.

Where possible, errors will result in a <report_error/> message which takes the place of the expected protocol response message. <report_error/> messages are CMS-signed XML messages like the rest of this protocol, and thus can be archived to provide an audit trail.

<report_error/> messages only appear in replies, never in queries. The <report_error/> message can appear in both the control and publication subprotocols.

The <report_error/> message includes an optional "tag" attribute to assist in matching the error with a particular query when using batching.

The error itself is conveyed in the error_code (attribute). The value of this attribute is a token indicating the specific error that occurred. At present this will be the name of a Python exception; the production version of this protocol will nail down the allowed error tokens here, probably in the RelaxNG schema.

The body of the <report_error/> element itself is an optional text string; if present, this is debugging information. At present this capabilty is not used, debugging information goes to syslog.

6.5 Additional access control considerations.

As detailed above, the publication protocol is trivially simple. This glosses over two bits of potential complexity:

- In the case where parent and child are sharing a repository, we'd like to nest
 child under parent, because testing has demonstrated that even on relatively slow
 hardware the delays involved in setting up separate rsync connections tend to
 dominate synchronization time for relying parties.
- The repository operator might also want to do some checks to assure itself that what it's about to allow the RPKI engine to publish is not dangerous toxic waste.

The up-down protocol includes a mechanism by which a parent can suggest a publication URI to each of its children. The children are not required to accept this hint, and the children must make separate arrangements with the repository operator (who might or might not be the same as the entity that hosts the children's RPKI engine operations) to use the suggested publication point, but if everything works out, this allows children to nest cleanly under their parents publication points, which helps reduce synchronization time for relying parties.

In this case, one could argue that the publication server is responsible for preventing one of its clients (the child in the above description) from stomping on data published by another of its clients (the parent in the above description). This goes beyond the

basic access check and requires the publication server to determine whether the parent has given its consent for the child to publish under the parent. Since the RPKI certificate profile requires the child's publication point to be indicated in an SIA extension in a certificate issued by the parent to the child, the publication engine can infer this permission from the parent's issuance of a certificate to the child. Since, by definition, the parent also uses this publication server, this is an easy check, as the publication server should already have the parent's certificate available by the time it needs to check the child's certificate.

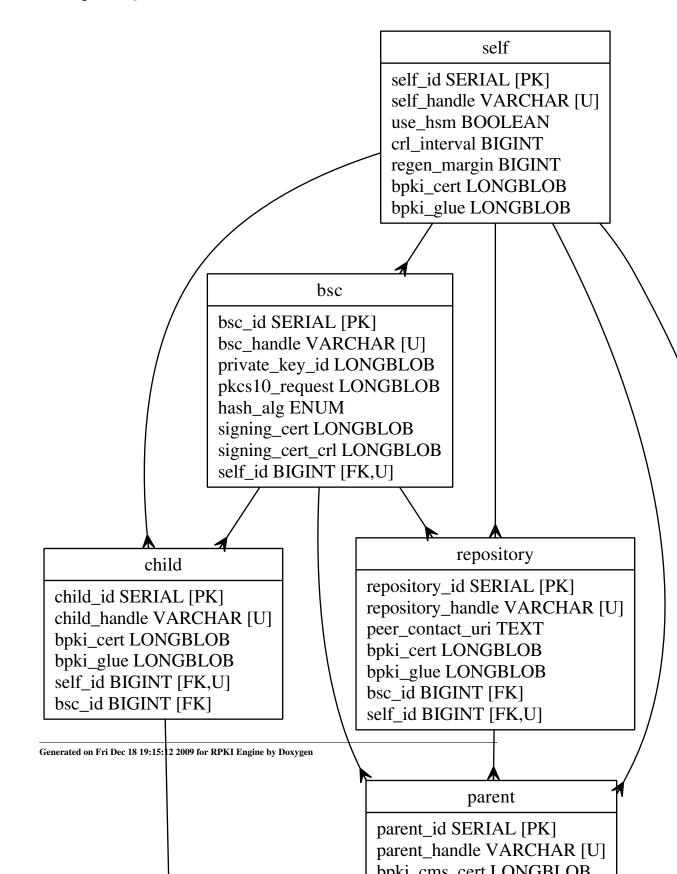

The previous paragraph only covers a "publish" action for a <certificate/> object. For "publish" actions on other objects, the publication server would need to trace permission back to the certificate issued by the parent; for "withdraw" actions, the publication server would have to perform the same checks it would perform for a "publish" action, using the current published data before withdrawing it. The latter in turn implies an ordering constraint on "withdraw" actions in order to preserve the data necessary for these access control decisions; as this may prove impractical, the publication server may probably need to make periodic sweeps over its published data looking for orphaned objects, but that's probably a good idea anyway.

Note that, in this publication model, any agreement that the repository makes to publish the RPKI engine's output is conditional upon the object to be published passing whatever access control checks the publication server imposes.

8 BPKI model

The "business PKI" (BPKI) is the PKI used to authenticate communication on the updown, left-right, and publication protocols.

BPKI certificates are *not* resource PKI (RPKI) certificates. The BPKI is a separate PKI that represents relationships between the various entities involved in the production side of the RPKI system. In most cases the BPKI tree will follow existing business relationships, hence the name "BPKI".

Setup of the BPKI is handled by the back end; for the most part, rpkid and pubd just use the result. The one place where the engines are directly involved in creation of new BPKI certificates is in the production of end-entity certificates for use by the engines.

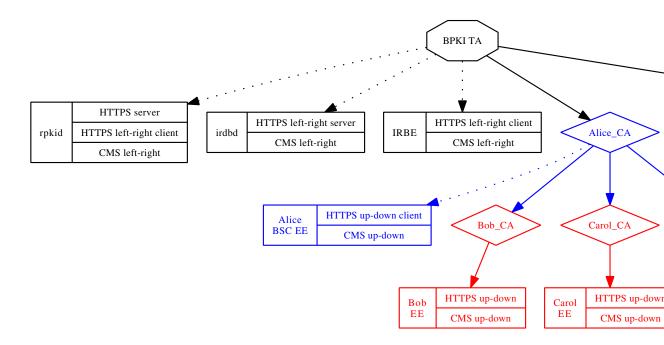

There are a few design principals that underly the chosen BPKI model:

- Each engine should rely on a single BPKI trust anchor which is controlled by the back end entity that runs the engine; all other trust material should be cross-certified into the engine's BPKI tree.
- Private keys must never transit the network.
- Except for end entity certificates, the engine should only have access to the BPKI certificates; in particular, the private key for the BPKI trust anchor should not be accessible to the engine.
- The number of BPKI keys and certificates that the engine has to manage should be no larger than is necessary.

rpkid's hosting model adds an additional constraint: rpkid's BPKI trust anchor belongs to the entity operating rpkid, but the entities hosted by rpkid should have control of their own BPKI private keys. This implies the need for an additional layer of BPKI certificate hierarchy within rpkid.

Here is a simplified picture of what the BPKI might look like for an rpkid operator that hosts two entities, "Alice" and "Ellen":

8 BPKI model 44

Black objects belong to the hosting entity, blue objects belong to the hosted entities, red objects are cross-certified objects from the hosted entities' peers. The arrows indicate certificate issuance: solid arrows are the ones that rpkid will care about during certificate validation, dotted arrows show the origin of the EE certificates that rpkid uses to sign CMS and TLS messages.

There's one nasty bit where the model had to bend to fit the current state of the underlying protocols: it's not possible to use exactly the same BPKI keys and certificates for HTTPS and CMS. The reason for this is simple: each hosted entity has its own BPKI, as does the hosting entity, but the HTTPS listener is shared. The only ways to avoid sharing the HTTPS server certificate would be to use separate listeners for each hosted entity, which scales poorly, or to rely on the TLS "Server Name Indication" extension (RFC 4366 3.1) which is not yet widely implemented.

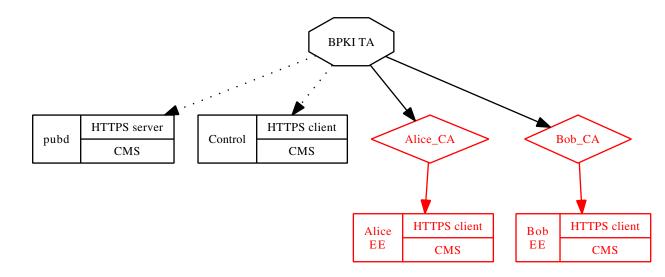

The certificate tree looks complicated, but the set of certificates needed to build any particular validation chain is obvious, again excepting the HTTPS server case, where the client certificate is the first hint that the engine has of the client's identity, so the server must be prepared to accept any current client certificate.

Detailed instructions on how to build a BPKI are beyond the scope of this document, but one can handle simple cases using the OpenSSL command line tool and cross_certify.py; the latter is a tool designed specifically for the purpose of generating the cross-certification certificates needed to splice foreign trust material into a BPKI tree.

The BPKI tree for a pubd instance is similar to to the BPKI tree for an rpkid instance, but is a bit simpler, as pubd does not provide hosting in the same sense that rpkid does: pubd is a relatively simple server that publishes objects as instructed by its clients.

8 BPKI model 45

Here's a simplified picture of what the BPKI might look like for a pubd operator that serves two clients, "Alice" and "Bob":

While it is likely that RIRs (at least) will operate both rpkid and pubd instances, the two functions are conceptually separate. As far as pubd is concerned, it doesn't matter who operates the rpkid instance: pubd just has clients, each of which has trust material that has been cross-certified into pubd's BPKI. Similarly, rpkid doesn't really care who operates a pubd instance that it's been configured to use, it just treats that pubd as a foreign BPKI whose trust material has to be cross-certified into its own BPKI. Cross certification itself is done by the back end operator, using cross_certify or some equivalent tool; the resulting BPKI certificates are configured into rpkid and pubd via the left-right protocol and the control subprotocol of the publication protocol, respectively.

Because the BPKI tree is almost entirely controlled by the operating entity, CRLs are not necessary for most of the BPKI. The one exception to this is the EE certificates issued under the cross-certification points. These EE certificates are generated by the peer, not the local operator, and thus require CRLs. Because of this, both rpkid and pubd require regular updates of certain BPKI CRLs, again via the left-right and publication control protocols.

Because the left-right protocol and the publication control subprotocol are used to configure BPKI certificates and CRLs, they cannot themselves use certificates and CRLs configured in this way. This is why the configuration files for rpkid and pubd require static configuration of the left-right and publication control certificates.

9.4.1 Detailed Description

Trivial RPKI up-down protocol root server, for testing. Not suitable for production use. Overrides a bunch of method definitions from the rpki.* classes in order to reuse as much code as possible.

```
Usage: python rootd.py [ { -c | --config } configfile ] [ { -h | --help } ]
```

Default configuration file is rootd.conf, override with --config option.

9.5 Package rpki

Packages

- package async
- package config
- package exceptions
- package https
- package ipaddrs
- package left_right
- package log
- package manifest
- package oids
- package publication

- package relaxng
- package resource_set
- package roa
- package rpki_engine
- package sql
- package sundial
- package up_down
- package x509
- package xml_utils

9.6 Package rpki.async

Classes

- · class iterator
- · class sync_wrapper
- · class timer

Functions

- def _raiseExitNow
- def defer
- def event_loop
- def exit_event_loop
- · def run deferred

Variables

- list deferred_queue = []
 - List to hold deferred actions.
- ExitNow = asyncore.ExitNow

9.6.1 Detailed Description

```
Utilities for event-driven programming.

$Id: async.py 2892 2009-12-18 19:11:21Z sra $

Copyright (C) 2009 Internet Systems Consortium ("ISC")
```

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS" AND ISC DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS. 9.6.2 Function Documentation

9.6.2.1 def rpki.async._raiseExitNow(signum, frame) [private]

Signal handler for event_loop().

Definition at line 269 of file async.py.

9.6.2.2 def rpki.async.defer (thunk)

Defer an action until the next pass through the event loop.

Definition at line 250 of file async.py.

9.6.2.3 def rpki.async.event_loop (catch_signals = (signal.SIGINT, signal.SIGTERM)

Replacement for asyncore.loop(), adding timer and signal support.

Definition at line 273 of file async.py.

9.6.2.4 def rpki.async.exit_event_loop ()

Force exit from event_loop().

Definition at line 343 of file async.py.

9.6.2.5 def rpki.async.run_deferred ()

Run deferred actions.

Definition at line 256 of file async.py.

9.6.3 Variable Documentation

9.6.3.1 rpki::async::deferred_queue = []

List to hold deferred actions. We used to do this with the timer queue, but that appears to confuse the garbage collector, and is overengineering for simple deferred actions in any case.

Definition at line 248 of file async.py.

9.6.3.2 rpki::async.ExitNow = asyncore.ExitNow

Definition at line 24 of file async.py.

9.7 Package rpki.config

Classes

class parser

9.7.1 Detailed Description

Configuration file parsing utilities, layered on top of stock Python ConfigParser module.

```
10: config.py 2637 2009-07-17 23:29:27Z sra
```

9.9.2 Function Documentation

9.9.2.1 def rpki.https.build_https_ta_cache (certs)

Package up a collection of certificates into a form suitable for use as a dynamic HTTPS trust anchor set. Precise format of this

collection is an internal conspiracy within the rpki.https module; at one point it was a POW.X509Store object, at the moment it's a Python set, what it will be tomorow is nobody else's business.

Definition at line 761 of file https.py.

9.9.2.2 def rpki.https.client (msg, client_key, client_cert, server_ta, url, callback, errback)

Open client HTTPS connection, send a message, set up callbacks to handle response. $% \begin{center} \end{center} \begin{center} \end{center}$

Definition at line 702 of file https.py.

9.9.2.3 def rpki.https.logger (self, msg)

Definition at line 173 of file https.py.

9.9.2.4 def rpki.https.server (handlers, server_key, server_cert, port, host = "", client_ta = (), dynamic_https_trust_anchor = None)

Run an HTTPS server and wait (forever) for connections.

Definition at line 747 of file https.py.

9.9.3 Variable Documentation

9.9.3.1 dictionary rpki::https.client queues = {}

Definition at line 700 of file https.py.

9.9.3.2 rpki::https.debug_http = False

Definition at line 49 of file https.py.

9.9.3.3 rpki::https.debug_tls_certs = False

Definition at line 52 of file https.py.

9.9.3.4 tuple rpki::https.default_client_timeout = rpki.sundial.timedelta(minutes = 15)

Definition at line 62 of file https.py.

9.9.3.5 tuple rpki::https.default_http_version = (1, 0)

Definition at line 65 of file https.py.

9.9.3.6 tuple rpki::https.default_server_timeout = rpki.sundial.timedelta(minutes = 20)

Definition at line 63 of file https.py.

9.9.3.7 string rpki::https.rpki_content_type = "application/x-rpki"

Definition at line 43 of file https.py.

9.9.3.8 rpki::https.want_persistent_client = True

Definition at line 55 of file https.py.

9.9.3.9 rpki::https.want_persistent_server = True

Definition at line 56 of file https.py.

9.10 Package rpki.ipaddrs

Classes

- · class v4addr
- · class v6addr

9.10.1 Detailed Description

Classes to represent IP addresses.

Given some of the other operations we need to perform on them, it's most convenient to represent IP addresses as Python "long" values. The classes in this module just wrap suitable read/write syntax around the underlying "long" type.

These classes also supply a "bits" attribute for use by other code built on these classes; for the most part, IPv6 addresses really are just IPv4 addresses with more bits, so we supply the number of bits once, here, thus avoiding a lot of duplicate code elsewhere.

9.11.2 Variable Documentation

9.11.2.1 rpki::left_right.enforce_strict_up_down_xml_sender = False

Definition at line 40 of file left_right.py.

9.12 Package rpki.log

Classes

• class logger

Functions

- def init
- def set trace
- def trace
- · def traceback

Variables

- tuple debug = logger(syslog.LOG_DEBUG)
- enable_trace = False

Whether call tracing is enabled.

- tuple error = logger(syslog.LOG_ERR)
- tuple info = logger(syslog.LOG_INFO)
- tuple note = logger(syslog.LOG_NOTICE)
- int pid = 0
- string tag = ""
- use_syslog = False

Whether to use syslog.

• tuple warn = logger(syslog.LOG_WARNING)

9.12.1 Detailed Description

Logging facilities for RPKI libraries.

\$Id: log.py 2732 2009-09-04 19:55:29Z sra \$

Copyright (C) 2009 Internet Systems Consortium ("ISC")

9.12.2 Function Documentation

9.12.2.1 def rpki.log.init (ident = "rpki", flags = syslog.LOG_PID | syslog.LOG_PERROR, facility = syslog.LOG_DAEMON)

Initialize logging system.

Definition at line 51 of file log.py.

9.12.2.2 def rpki.log.set_trace (enable)

Enable or disable call tracing.

Definition at line 63 of file log.py.

9.12.2.3 def rpki.log.trace ()

Execution trace -- where are we now, and whence came we here?

Definition at line 91 of file log.py.

9.12.2.4 def rpki.log.traceback ()

Consolidated backtrace facility with a bit of extra info.

Definition at line 100 of file log.py.

9.12.3 Variable Documentation

9.12.3.1 tuple rpki::log.debug = logger(syslog.LOG_DEBUG)

Definition at line 89 of file log.py.

9.12.3.2 rpki::log::enable_trace = False

Whether call tracing is enabled.

Definition at line 41 of file log.py.

9.12.3.3 tuple rpki::log.error = logger(syslog.LOG_ERR)

Definition at line 85 of file log.py.

9.12.3.4 tuple rpki::log.info = logger(syslog.LOG_INFO)

Definition at line 88 of file log.py.

9.12.3.5 tuple rpki::log.note = logger(syslog.LOG_NOTICE)

Definition at line 87 of file log.py.

9.12.3.6 int rpki::log.pid = 0

Definition at line 49 of file log.py.

9.12.3.7 string rpki::log.tag = ""

Definition at line 48 of file log.py.

9.12.3.8 rpki::log::use_syslog = False

Whether to use syslog.

Definition at line 46 of file log.py.

9.12.3.9 tuple rpki::log.warn = logger(syslog.LOG_WARNING)

Definition at line 86 of file log.py.

9.13 Package rpki.manifest

Classes

- class FileAndHash
- class FilesAndHashes
- · class Manifest

9.13.1 Detailed Description

Signed manifests. This is just the ASN.1 encoder, the rest is in rpki.x509 with the rest of the DER_object code.

Note that rpki.x509.SignedManifest implements the signed manifest; the structures here are just the payload of the CMS eContent field.

\$Id: manifest.py 2424 2009-05-11 06:37:32Z sra \$

Copyright (C) 2007--2008 American Registry for Internet Numbers ("ARIN")

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

9.14 Package rpki.oids

Variables

- tuple name2oid = dict((v, k) for k, v in oid2name.items())

 Mapping table of string names to OIDs.
- dictionary oid2name

Mapping table of OIDs to conventional string names.

9.14.1 Detailed Description

OID database.

\$Id: oids.py 2424 2009-05-11 06:37:32Z sra \$

Copyright (C) 2007--2008 American Registry for Internet Numbers ("ARIN")

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

9.16 Package rpki.relaxng

Variables

- tuple left_right

 Parsed RelaxNG left_right schema.
- tuple publication

 Parsed RelaxNG publication schema.
- tuple up_down

 Parsed RelaxNG up_down schema.

9.16.1 Variable Documentation

9.16.1.1 rpki::relaxng::left_right

Parsed RelaxNG left_right schema.

Definition at line 7 of file relaxng.py.

9.16.1.2 rpki::relaxng::publication

Parsed RelaxNG publication schema.

Definition at line 1171 of file relaxng.py.

9.16.1.3 rpki::relaxng::up_down

Parsed RelaxNG up_down schema.

Definition at line 917 of file relaxng.py.

9.17 Package rpki.resource_set

Classes

• class resource_bag

- class resource_range
- class resource_range_as
- class resource_range_ip
- class resource_range_ipv4
- class resource_range_ipv6
- · class resource_set
- class resource_set_as
- class resource_set_ip
- class resource_set_ipv4
- class resource_set_ipv6
- class roa_prefix
- class roa_prefix_ipv4
- class roa_prefix_ipv6
- class roa_prefix_set
- class roa_prefix_set_ipv4
- class roa_prefix_set_ipv6

Functions

- def _bs2long
- def _long2bs
- def _rsplit
- def test1
- def test2

Variables

• string inherit_token = "<inherit>"

Token used to indicate inheritance in read and print syntax.

9.17.1 Detailed Description

Classes dealing with sets of resources.

The basic mechanics of a resource set are the same for any of the resources we handle (ASNs, IPv4 addresses, or IPv6 addresses), so we can provide the same operations on any of them, even though the underlying details vary.

We also provide some basic set operations (union, intersection, etc).

\$Id: resource_set.py 2776 2009-09-19 03:26:51Z sra \$

9.17.2 Function Documentation

9.17.2.1 def rpki.resource_set._bs2long (bs, addrlen, fill) [private]

Utility function to convert a bitstring (POW.pkix tuple representation) into a Python long.

Definition at line 514 of file resource_set.py.

9.17.2.2 def rpki.resource_set._long2bs (number, addrlen, prefixlen = None, strip = None) [private]

Utility function to convert a Python long into a POW.pkix tuple bitstring. This is a bit complicated because it supports the fiendishly compact encoding used in RFC 3779.

Definition at line 526 of file resource_set.py.

9.17.2.3 def rpki.resource_set._rsplit (rset, that) [private]

Utility function to split a resource range into two resource ranges.

Definition at line 190 of file resource_set.py.

9.17.2.4 def rpki.resource_set.test1 (*t*, *s1*, *s2*)

Definition at line 884 of file resource_set.py.

9.17.2.5 def rpki.resource_set.test2 (*t*, *s1*, *s2*)

Definition at line 917 of file resource_set.py.

9.17.3 Variable Documentation

9.17.3.1 rpki::resource_set::inherit_token = "<inherit>"

Token used to indicate inheritance in read and print syntax.

Definition at line 48 of file resource_set.py.

9.18 Package rpki.roa

Classes

- class ROAIPAddress
- class ROAIPAddresses
- class ROAIPAddressFamilies
- class ROAIPAddressFamily
- class RouteOriginAttestation

9.18.1 Detailed Description

ROA (Route Origin Authorization).

At the moment this is just the ASN.1 encoder.

```
This corresponds to draft-ietf-sidr-roa-format, which is a work in
progress, so this may need updating later.
$Id: roa.py 2424 2009-05-11 06:37:32Z sra $
Copyright (C) 2007--2008 American Registry for Internet Numbers ("ARIN")
Permission to use, copy, modify, and distribute this software for any
purpose with or without fee is hereby granted, provided that the above

OR OTHER TORTIOUS ACTION, ARISING OUT OF OR IN CONNECTION WITH THE USE OR
PERFORMANCE OF THIS SOFTWARE.
draft-ietf-sidr-roa-format-03 2.1.3.2 specifies:
   RouteOriginAttestation ::= SEQUENCE {
     version [0] INTEGER DEFAULT 0,
      asID ASID,
     ipAddrBlocks SEQUENCE OF ROAIPAddressFamily }
   ASID ::= INTEGER
   ROAIPAddressFamily ::= SEQUENCE {
     addressFamily OCTET STRING (SIZE (2..3)),
      addresses SEQUENCE OF ROAIPAddress }
   ROAIPAddress ::= SEQUENCE {
      address IPAddress,
      maxLength INTEGER OPTIONAL }
   IPAddress ::= BIT STRING
```

9.19 Package rpki.rpki_engine

Classes

- class ca_detail_obj
- class ca obj
- class child_cert_obj
- class publication_queue
- class revoked_cert_obj
- class roa_obj
- class rpkid_context

9.19.1 Detailed Description

```
Global context for rpkid.
```

9.21 Package rpki.sundial

Classes

- · class datetime
- class timedelta

Functions

- def cast
- def now
- def test

9.21.1 Detailed Description

Unified RPKI date/time handling, based on the standard Python datetime module.

Module name chosen to sidestep a nightmare of import-related errors that occur with the more obvious module names.

List of arithmetic methods that require result casting was derived by inspection of the datetime module, to wit:

```
>>> import datetime
>>> for t in (datetime.datetime, datetime.timedelta):
... for k in t.__dict__.keys():
```

```
... if k.startswith("__"):
... print "%s.%s()" % (t.__name__, k)

$Id: sundial.py 2785 2009-09-25 20:21:53Z sra $

Copyright (C) 2009 Internet Systems Consortium ("ISC")

9.23 Package rpki.x509

Classes

- class CMS_object
- class CRL
- class DER_CMS_object
- class DER_object
- class PEM converter
- class PKCS10
- class ROA
- class RSA

- class RSApublic
- class SignedManifest
- class X509
- class XML_CMS_object

Functions

- · def calculate SKI
- def POWify_OID

9.23.1 Detailed Description

One X.509 implementation to rule them all...

 \dots and in the darkness hide the twisty maze of partially overlapping X.509 support packages in Python.

There are several existing packages, none of which do quite what I need, due to age, lack of documentation, specialization, or lack of foresight on somebody's part (perhaps mine). This module attempts to bring together the functionality I need in a way that hides at least some of the nasty details. This involves a lot of format conversion.

10 Class Documentation

10.1 async_chat Class Reference

Inherited by rpki.https.http stream.

The documentation for this class was generated from the following file:

• https.py (2888)

10.2 dispatcher Class Reference

Inherited by rpki.https.http_listener.

The documentation for this class was generated from the following file:

• https.py (2888)

10.3 Exception Class Reference

Inherited by rpki.exceptions.RPKI_Exception.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.4 irbe_cli.bsc_elt Class Reference

Inherits irbe_cli::cmd_elt_mixin, and rpki::left_right::bsc_elt.

Public Member Functions

- def client_query_signing_cert
- def client_query_signing_cert_crl
- def client_reply_decode

Public Attributes

- signing_cert
- signing_cert_crl

Static Public Attributes

• tuple excludes = ("pkcs10_request",)

XML attributes and elements that should not be allowed as command line arguments.

10.4.1 Detailed Description

Definition at line 189 of file irbe_cli.py.

10.4.2 Member Function Documentation

10.4.2.1 def irbe_cli.bsc_elt.client_query_signing_cert (self, arg)

```
--signing_cert option.
```

Definition at line 193 of file irbe_cli.py.

10.4.2.2 def irbe_cli.bsc_elt.client_query_signing_cert_crl (self, arg)

```
--signing_cert_crl option.
```

Definition at line 197 of file irbe_cli.py.

10.4.2.3 def irbe_cli.bsc_elt.client_reply_decode (self)

Reimplemented from irbe_cli.reply_elt_mixin.

Definition at line 201 of file irbe_cli.py.

10.4.3 Member Data Documentation

10.4.3.1 tuple irbe_cli.bsc_elt.excludes = ("pkcs10_request",) [static]

XML attributes and elements that should not be allowed as command line arguments.

Reimplemented from irbe_cli.cmd_elt_mixin.

Definition at line 191 of file irbe_cli.py.

10.4.3.2 irbe_cli.bsc_elt.signing_cert

Reimplemented from rpki.left_right.bsc_elt.

Definition at line 195 of file irbe_cli.py.

10.4.3.3 irbe_cli.bsc_elt.signing_cert_crl

Reimplemented from rpki.left_right.bsc_elt.

Definition at line 199 of file irbe_cli.py.

The documentation for this class was generated from the following file:

• irbe_cli.py (2799)

10.5 irbe_cli.caller Class Reference

Inherits object.

Public Member Functions

- def __call__
- def __init__

Public Attributes

- client_cert
- client_key
- cms_class
- server_cert
- server_ta
- url

10.5.1 Detailed Description

Handle client-side mechanics for left-right and publication protocols.

Definition at line 41 of file irbe_cli.py.

10.5.2 Member Function Documentation

10.5.2.1 def irbe_cli.caller.__call__ (self, cb, eb, msg)

10.9.1 Detailed Description

Protocol mix-in for command line client element PDUs.

Definition at line 105 of file irbe_cli.py.

10.9.2 Member Function Documentation

10.9.2.1 def irbe_cli.cmd_elt_mixin.client_getopt (self, argv)

Parse options for this class.

Definition at line 129 of file irbe_cli.py.

10.9.2.2 def irbe_cli.cmd_elt_mixin.client_query_bpki_cert (self, arg)

Special handler for --bpki_cert option.

Definition at line 146 of file irbe_cli.py.

10.9.2.3 def irbe_cli.cmd_elt_mixin.client_query_bpki_cms_cert (self, arg)

Special handler for --bpki_cms_cert option.

Definition at line 154 of file irbe_cli.py.

10.9.2.4 def irbe_cli.cmd_elt_mixin.client_query_bpki_https_cert (self, arg)

Special handler for --bpki_https_cert option.

Definition at line 162 of file irbe_cli.py.

10.9.2.5 def irbe_cli.cmd_elt_mixin.client_query_cms_glue (self, arg)

Special handler for --bpki_cms_glue option.

Definition at line 158 of file irbe_cli.py.

10.9.2.6 def irbe_cli.cmd_elt_mixin.client_query_glue (self, arg)

Special handler for --bpki_glue option.

Definition at line 150 of file irbe_cli.py.

10.9.2.7 def irbe_cli.cmd_elt_mixin.client_query_https_glue (self, arg)

Special handler for --bpki_https_glue option.

Definition at line 166 of file irbe_cli.py.

10.9.2.8 def irbe_cli.cmd_elt_mixin.usage (cls)

Generate usage message for this PDU.

Definition at line 118 of file irbe_cli.py.

10.9.3 Member Data Documentation

10.9.3.1 irbe_cli.cmd_elt_mixin.bpki_cert

Definition at line 148 of file irbe_cli.py.

10.9.3.2 irbe_cli.cmd_elt_mixin.bpki_cms_cert

Definition at line 156 of file irbe_cli.py.

10.9.3.3 irbe_cli.cmd_elt_mixin.bpki_cms_glue

Definition at line 160 of file irbe_cli.py.

10.9.3.4 irbe_cli.cmd_elt_mixin.bpki_glue

Definition at line 152 of file irbe_cli.py.

10.9.3.5 irbe_cli.cmd_elt_mixin.bpki_https_cert

Definition at line 164 of file irbe_cli.py.

10.9.3.6 irbe_cli.cmd_elt_mixin.bpki_https_glue

Definition at line 168 of file irbe_cli.py.

10.9.3.7 irbe_cli.cmd_elt_mixin::excludes = () [static]

XML attributes and elements that should not be allowed as command line arguments.

Reimplemented in irbe_cli.bsc_elt, and irbe_cli.list_published_objects_elt.

Definition at line 115 of file irbe_cli.py.

10.9.3.8 irbe_cli.cmd_elt_mixin.is_cmd = True [static]

Reimplemented from irbe_cli.reply_elt_mixin.

Definition at line 110 of file irbe_cli.py.

The documentation for this class was generated from the following file:

• irbe_cli.py (2799)

10.10 irbe_cli.cmd_msg_mixin Class Reference

Inherits object.

Inherited by irbe_cli.left_right_msg, and irbe_cli.publication_msg.

Public Member Functions

• def usage

10.10.1 Detailed Description

Protocol mix-in for command line client message PDUs.

Definition at line 170 of file irbe_cli.py.

10.39 rpki.async.iterator Class Reference

Inherits object.

Public Member Functions

- def call
- def __init__
- def __repr__
- def doit
- def ignore

Public Attributes

- caller_function
- done_callback
- item_callback
- iterator
- unwind_stack

10.39.1 Detailed Description

Iteration construct for event-driven code. Takes three arguments:

- Some kind of iterable object
- A callback to call on each item in the iteration
- A callback to call after the iteration terminates.

The item callback receives two arguments: the callable iterator object and the current value of the iteration. It should call the iterator (or arrange for the iterator to be called) when it is time to continue to the next item in the iteration.

The termination callback receives no arguments.

Definition at line 26 of file async.py.

10.39.2 Member Function Documentation

10.39.2.1 def rpki.async.iterator.__call__ (self)

Definition at line 64 of file async.py.

10.40 rpki.async.sync_wrapper Class Reference

Inherits object.

Public Member Functions

- def __call__
- def __init__
- def cb
- def eb

Public Attributes

• func

Static Public Attributes

- err = None
- res = None

10.40.1 Detailed Description

Synchronous wrapper around asynchronous functions. Running in asynchronous mode at all times makes sense for event-driven daemons, but is kind of tedious for simple scripts, hence this wrapper.

The wrapped function should take at least two arguments: a callback function and an errback function. If any arguments are passed to the wrapper, they will be passed as additional arguments to the wrapped function.

Definition at line 300 of file async.py.

10.40.2 Member Function Documentation

10.40.2.1 def rpki.async.sync_wrapper.__call__ (self, args, kwargs)

Definition at line 326 of file async.py.

10.40.2.2 def rpki.async.sync_wrapper.__init__ (self, func)

Definition at line 315 of file async.py.

10.41 rpki.async.timer Class Reference

Inherits object.

Public Member Functions

- def __cmp__
- def __del__
- def init
- def __repr__
- def cancel
- def clear
- def errback
- def handler
- def is_set
- def runq
- def seconds_until_wakeup
- def set
- def set_errback
- def set_handler
- def trace

Public Attributes

- errback
- handler
- when

Static Public Attributes

• gc_debug = False

Verbose chatter about timers states and garbage collection.

• list queue = []

Timer queue, shared by all timer instances (there can be only one queue).

• run_debug = False

Verbose chatter about timers being run.

10.41.1 Detailed Description

Timer construct for event-driven code. It can be used in either of two ways:

- As a virtual class, in which case the subclass should provide a handler() method to receive the wakup event when the timer expires; or
- By setting an explicit handler callback, either via the constructor or the set_handler() method.

Subclassing is probably more Pythonic, but setting an explict handler turns out to be very convenient when combined with bound methods to other objects.

Definition at line 80 of file async.py.

10.41.2 Member Function Documentation

10.41.2.1 def rpki.async.timer.__cmp__ (self, other)

Definition at line 143 of file async.py.

10.41.2.2 def rpki.async.timer.__del__ (self)

Definition at line 147 of file async.py.

10.41.2.3 def rpki.async.timer.__init__ (self, handler = None, errback = None)

Definition at line 107 of file async.py.

10.41.2.4 def rpki.async.timer.__repr__ (self)

Definition at line 209 of file async.py.

10.41.2.5 def rpki.async.timer.cancel (self)

```
Cancel a timer, if it was set.
```

Definition at line 150 of file async.py.

10.41.2.6 def rpki.async.timer.clear (cls)

Cancel every timer on the queue. We could just throw away the queue content, but this way we can notify subclasses that provide their own cancel() method.

Definition at line 234 of file async.py.

10.41.2.7 def rpki.async.timer.errback (self, e)

```
Error callback. May be overridden, or set with set_errback().
```

Definition at line 181 of file async.py.

10.41.2.8 def rpki.async.timer.handler (self)

Handle a timer that has expired. This must either be overriden by a subclass or set dynamically by $set_handler()$.

Definition at line 164 of file async.py.

10.41.2.9 def rpki.async.timer.is_set (self)

Test whether this timer is currently set.

Definition at line 160 of file async.py.

10.41.2.10 def rpki.async.timer.runq (cls)

Run the timer queue: for each timer whose call time has passed, pull the timer off the queue and call its handler() method.

Definition at line 193 of file async.py.

10.41.2.11 def rpki.async.timer.seconds_until_wakeup (cls)

Calculate delay until next timer expires, or None if no timers are set and we should wait indefinitely. Rounds up to avoid spinning in select() or poll(). We could calculate fractional seconds in the right units instead, but select() and poll() don't even take the same units (argh!), and we're not doing anything that hair-triggered, so rounding up is simplest.

Definition at line 213 of file async.py.

10.41.2.12 def rpki.async.timer.set (self, when)

Set a timer. Argument can be a datetime, to specify an absolute time, a timedelta, to specify an offset time, or None, to indicate that the timer should expire immediately, which can be useful in avoiding an excessively deep call stack.

Definition at line 123 of file async.py.

10.41.2.13 def rpki.async.timer.set_errback (self, errback)

Set a timer's errback. Like set_handler(), for errbacks.

Definition at line 188 of file async.py.

10.41.2.14 def rpki.async.timer.set_handler (self, handler)

Set timer's expiration handler. This is an alternative to subclassing the timer class, and may be easier to use when integrating timers into other classes (eg, the handler can be a bound method to an object in a class representing a network connection).

Definition at line 171 of file async.py.

10.41.2.15 def rpki.async.timer.trace (self, msg)

Debug logging.

Definition at line 115 of file async.py.

10.41.3 Member Data Documentation

10.41.3.1 rpki.async.timer.errback

Definition at line 190 of file async.py.

10.41.3.2 rpki::async.timer::gc_debug = False [static]

Verbose chatter about timers states and garbage collection.

Definition at line 97 of file async.py.

10.41.3.3 rpki.async.timer.handler

Definition at line 179 of file async.py.

10.41.3.4 rpki::async.timer::queue = [] [static]

Timer queue, shared by all timer instances (there can be only one queue).

Definition at line 105 of file async.py.

10.41.3.5 rpki::async.timer::run_debug = False [static]

Verbose chatter about timers being run.

Definition at line 101 of file async.py.

10.41.3.6 rpki.async.timer.when

Definition at line 112 of file async.py.

The documentation for this class was generated from the following file:

10.42 rpki.config.parser Class Reference

Inherits object.

Public Member Functions

- def __init__
- def get
- def getboolean
- def getint
- def has_option
- def has_section
- def multiget

Public Attributes

- cfg
- default_section
- filename

Private Member Functions

• def _get_wrapper

10.42.1 Detailed Description

Extensions to stock Python ConfigParser:

Read config file and set default section while initializing parser object.

Support for OpenSSL-style subscripted options.

get-methods with default values and default section name.

Definition at line 38 of file config.py.

10.42.2 Member Function Documentation

10.42.2.1 def rpki.config.parser.__init__ (self, filename, section = None, allow_missing = False)

Initialize this parser.

Definition at line 49 of file config.py.

10.42.2.2 def rpki.config.parser_get_wrapper (self, method, section, option, default) [private]

Wrapper method to add default value and default section support to $ConfigParser\ methods$.

Definition at line 98 of file config.py.

10.42.2.3 def rpki.config.parser.get (self, option, default = None, section = None)

Get an option, perhaps with a default value.

Definition at line 111 of file config.py.

10.42.2.4 def rpki.config.parser.getboolean (self, option, default = None, section = None)

Get a boolean option, perhaps with a default value.

Definition at line 117 of file config.py.

10.42.2.5 def rpki.config.parser.getint (self, option, default = None, section = None)

Get an integer option, perhaps with a default value.

Definition at line 123 of file config.py.

10.42.2.6 def rpki.config.parser.has_option (self, option, section = None)

Test whether an option exists.

Definition at line 70 of file config.py.

10.42.2.7 def rpki.config.parser.has_section (self, section)

Test whether a section exists.

Definition at line 63 of file config.py.

10.42.2.8 def rpki.config.parser.multiget (self, option, section = None)

Parse OpenSSL-style foo.0, foo.1, ... subscripted options.

Returns a list of values matching the specified option name.

Definition at line 79 of file config.py.

10.42.3 Member Data Documentation

10.42.3.1 rpki.config.parser.cfg

Definition at line 55 of file config.py.

10.42.3.2 rpki.config.parser.default_section

Definition at line 61 of file config.py.

10.42.3.3 rpki.config.parser.filename

Definition at line 54 of file config.py.

```

10.86.1 Detailed Description

Base class for RPKI exceptions.

Definition at line 35 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.87 rpki.exceptions.ServerShuttingDown Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.87.1 Detailed Description

Server is shutting down.

Definition at line 222 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.88 rpki.exceptions.SKIMismatch Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.88.1 Detailed Description

```
SKI value in response does not match request.
```

Definition at line 142 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.89 rpki.exceptions.SubprocessError Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.89.1 Detailed Description

```
Subprocess returned unexpected error.
```

Definition at line 147 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.90 rpki.exceptions.TLSValidationError Class Reference

Inherits rpki::exceptions::RPKI_Exception.

Inherited by rpki.exceptions.MultipleTLSEECert, and rpki.exceptions.ReceivedTLSCACert.

10.90.1 Detailed Description

```
TLS certificate validation error.
```

Definition at line 167 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.91 rpki.exceptions.UnexpectedCMSCerts Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.91.1 Detailed Description

```
Received CMS certs when not expecting any.
```

Definition at line 192 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.92 rpki.exceptions.UnexpectedCMSCRLs Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.92.1 Detailed Description

```
Received CMS CRLs when not expecting any.
```

Definition at line 197 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.93 rpki.exceptions.UnparsableCMSDER Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.93.1 Detailed Description

```
Alleged CMS DER wasn't parsable.
```

Definition at line 212 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.94 rpki.exceptions.UpstreamError Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.94.1 Detailed Description

```
Received an error from upstream.
```

Definition at line 112 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.95 rpki.exceptions.WrongEContentType Class Reference

Inherits rpki::exceptions::RPKI_Exception.

10.95.1 Detailed Description

```
Received wrong CMS eContentType.
```

Definition at line 182 of file exceptions.py.

The documentation for this class was generated from the following file:

• exceptions.py (2742)

10.96 rpki.https.http_client Class Reference

Inherits rpki::https::http_stream.

10.104 rpki.ipaddrs.v4addr Class Reference

Inherits long.

Public Member Functions

- def __new___
- def <u>str</u>
- def from_bytes
- def to_bytes

Static Public Attributes

• int bits = 32

10.104.1 Detailed Description

IPv4 address.

Derived from long, but supports IPv4 print syntax.

Definition at line 47 of file ipaddrs.py.

10.104.2 Member Function Documentation

10.104.2.1 def rpki.ipaddrs.v4addr.__new__ (*cls*, *x*)

Construct a v4addr object.

Definition at line 56 of file ipaddrs.py.

10.104.2.2 def rpki.ipaddrs.v4addr.__str__ (self)

Convert a v4addr object to string format.

Definition at line 74 of file ipaddrs.py.

10.104.2.3 def rpki.ipaddrs.v4addr.from_bytes (cls, x)

Convert from a raw byte string to a v4addr object.

Definition at line 70 of file ipaddrs.py.

10.104.2.4 def rpki.ipaddrs.v4addr.to_bytes (self)

Convert a v4addr object to a raw byte string.

Definition at line 65 of file ipaddrs.py.

10.104.3 Member Data Documentation

10.104.3.1 int rpki.ipaddrs.v4addr.bits = 32 [static]

Definition at line 54 of file ipaddrs.py.

The documentation for this class was generated from the following file:

10.105 rpki.ipaddrs.v6addr Class Reference

Inherits long.

Public Member Functions

- def new
- def <u>__str___</u>
- def from_bytes
- def to_bytes

Static Public Attributes

• int bits = 128

10.105.1 Detailed Description

```
IPv6 address.
```

Derived from long, but supports IPv6 print syntax.

Definition at line 78 of file ipaddrs.py.

10.105.2 Member Function Documentation

10.105.2.1 def rpki.ipaddrs.v6addr.__new__ (*cls*, *x*)

Construct a v6addr object.

Definition at line 87 of file ipaddrs.py.

10.105.2.2 def rpki.ipaddrs.v6addr.__str__ (self)

Convert a v6addr object to string format.

Definition at line 104 of file ipaddrs.py.

10.105.2.3 def rpki.ipaddrs.v6addr.from_bytes (cls, x)

Convert from a raw byte string to a v6addr object.

Definition at line 99 of file ipaddrs.py.

10.105.2.4 def rpki.ipaddrs.v6addr.to_bytes (self)

Convert a v6addr object to a raw byte string.

Definition at line 94 of file ipaddrs.py.

10.105.3 Member Data Documentation

10.105.3.1 int rpki.ipaddrs.v6addr.bits = 128 [static]

Definition at line 85 of file ipaddrs.py.

• left_right.py (2876)

10.107 rpki.left_right.child_elt Class Reference

 $Inherits\ rpki::left_right::data_elt.$

Inherited by irbe_cli.child_elt.

Public Member Functions

- def ca_from_class_name
- def child_certs
- def endElement
- def parents
- def serve_destroy_hook
- def serve_post_save_hook
- def serve_up_down

Static Public Attributes

```
• tuple attributes = ("action", "tag", "self_handle", "child_handle", "bsc_handle")
```

XML attributes for this element.

• tuple booleans = ("reissue",)

Boolean attributes (value "yes" or "no") for this element.

- bpki_cert = None
- bpki_glue = None
- clear_https_ta_cache = False
- string element_name = "child"
- tuple elements = ("bpki_cert", "bpki_glue")

XML elements contained by this element.

- tuple handles = (("self", self_elt), ("bsc", bsc_elt))
- tuple sql_template

10.107.1 Detailed Description

<child/> element.

Definition at line 782 of file left_right.py.

10.107.2 Member Function Documentation

10.107.2.1 def rpki.left_right.child_elt.ca_from_class_name (self, class_name)

Fetch the CA corresponding to an up-down class_name.

Definition at line 811 of file left_right.py.

10.107.2.2 def rpki.left_right.child_elt.child_certs (self, ca_detail = None, ski = None, unique = False)

Fetch all child_cert objects that link to this child object.

Definition at line 803 of file left_right.py.

10.107.2.3 def rpki.left_right.child_elt.endElement (self, stack, name, text)

Handle subelements of <child/> element. These require special handling because modifying them invalidates the HTTPS trust anchor cache. $\,$

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 843 of file left_right.py.

10.107.2.4 def rpki.left_right.child_elt.parents (self)

Fetch all parent objects that link to self object to which this child object links.

Definition at line 807 of file left_right.py.

10.107.2.5 def rpki.left_right.child_elt.serve_destroy_hook (self, cb, eb)

Extra server actions when destroying a child_elt.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 835 of file left_right.py.

10.107.2.6 def rpki.left_right.child_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)

Extra server actions for child_elt.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 825 of file left_right.py.

10.107.2.7 def rpki.left_right.child_elt.serve_up_down (self, query, callback)

Outer layer of server handling for one up-down PDU from this child.

Definition at line 853 of file left_right.py.

10.107.3 Member Data Documentation

10.107.3.1 tuple rpki.left_right.child_elt.attributes = ("action", "tag", "self_handle", "child_handle", "bsc_handle") [static]

XML attributes for this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 788 of file left_right.py.

10.107.3.2 tuple rpki.left_right.child_elt.booleans = ("reissue",) [static]

Boolean attributes (value "yes" or "no") for this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 790 of file left_right.py.

10.109 rpki.left_right.data_elt Class Reference

Inherits rpki::xml_utils::data_elt, rpki::sql::sql_persistent, and rpki::left_right::left_right_namespace.

Inherited by rpki.left_right.bsc_elt, rpki.left_right.child_elt, rpki.left_right.parent_elt, rpki.left_right.repository_elt, and rpki.left_right.self_elt.

Public Member Functions

- def bsc
- def make_reply_clone_hook
- def self
- def serve_fetch_all
- def serve_fetch_handle
- def serve_fetch_one_maybe
- def serve pre save hook

Static Public Attributes

- tuple handles = ()
- self_handle = None
- self_id = None

10.109.1 Detailed Description

Virtual class for top-level left-right protocol data elements.

Definition at line 50 of file left_right.py.

10.109.2 Member Function Documentation

10.109.2.1 def rpki.left_right.data_elt.bsc (self)

Return BSC object to which this object links.

Definition at line 64 of file left_right.py.

10.109.2.2 def rpki.left_right.data_elt.make_reply_clone_hook (self, r_pdu)

Set handles when cloning, including _id -> _handle translation.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 68 of file left_right.py.

10.109.2.3 def rpki.left_right.data_elt.self (self)

Fetch self object to which this object links.

Definition at line 60 of file left_right.py.

10.109.2.4 def rpki.left_right.data_elt.serve_fetch_all (self)

Find the objects on which a list method should operate.

Reimplemented in rpki.left right.self elt.

Definition at line 99 of file left_right.py.

10.109.2.5 def rpki.left_right.data_elt.serve_fetch_handle (cls, gctx, self_id, handle)

Find an object based on its handle.

Reimplemented in rpki.left_right.self_elt.

Definition at line 84 of file left_right.py.

10.109.2.6 def rpki.left_right.data_elt.serve_fetch_one_maybe (self)

Find the object on which a get, set, or destroy method should operate, or which would conflict with a create method.

Reimplemented in rpki.left_right.self_elt.

Definition at line 90 of file left_right.py.

10.109.2.7 def rpki.left_right.data_elt.serve_pre_save_hook (self, q_pdu, r_pdu, cb, eb)

Hook to do _handle => _id translation before saving.

self is always the object to be saved to SQL. For create operations, self and q_pdu are be the same object; for set operations, self is the pre-existing object from SQL and q_pdu is the set request received from the the IRBE.

Reimplemented from rpki.xml_utils.data_elt.

Reimplemented in rpki.left_right.bsc_elt.

Definition at line 106 of file left_right.py.

10.109.3 Member Data Documentation

10.109.3.1 tuple rpki.left_right.data_elt.handles = () [static]

Reimplemented in rpki.left_right.self_elt, rpki.left_right.bsc_elt, rpki.left_right.repository_elt, rpki.left_right.parent_elt, and rpki.left_right.child_elt.

Definition at line 55 of file left_right.py.

10.109.3.2 rpki.left_right.data_elt.self_handle = None [static]

Definition at line 58 of file left_right.py.

10.109.3.3 rpki.left_right.data_elt.self_id = None [static]

Definition at line 57 of file left_right.py.

The documentation for this class was generated from the following file:

• left right.py (2876)

10.110 rpki.left_right_left_right_namespace Class Reference

Inherits object.

Inherited by rpki.left_right.data_elt, rpki.left_right.list_published_objects_elt, rpki.left_right.list_resources_elt, rpki.left_right.list_roa_requests_elt, rpki.left_right.msg, and rpki.left_right.report_error_elt.

Static Public Attributes

- dictionary nsmap = { None : xmlns }
- string xmlns = "http://www.hactrn.net/uris/rpki/left-right-spec/"

10.110.1 Detailed Description

XML namespace parameters for left-right protocol.

Definition at line 42 of file left_right.py.

10.110.2 Member Data Documentation

10.110.2.1 dictionary rpki.left_right_namespace.nsmap = { None : xmlns } [static]

Definition at line 48 of file left_right.py.

Definition at line 47 of file left_right.py.

• left_right.py (2876)

10.111 rpki.left_right.list_published_objects_elt Class Reference

Inherits rpki::xml_utils::text_elt, and rpki::left_right::left_right_namespace.
Inherited by irbe_cli.list_published_objects_elt.

Public Member Functions

- def make_reply
- · def serve_dispatch

Static Public Attributes

- tuple attributes = ("self_handle", "tag", "uri")

 XML attributes for this element.
- string element_name = "list_published_objects"
- obj = None
- string text_attribute = "obj"

Name of the class attribute that holds the text value.

10.111.1 Detailed Description

<list_published_objects/> element.

Definition at line 945 of file left_right.py.

10.111.2 Member Function Documentation

10.111.2.1 def rpki.left_right.list_published_objects_elt.make_reply (self, uri, obj)

Generate one reply PDU.

Definition at line 972 of file left_right.py.

10.111.2.2 def rpki.left_right.list_published_objects_elt.serve_dispatch (self, r_msg, cb, eb)

Handle a list_published_objects/> query. The method name is a misnomer here, there's no action attribute and no dispatch, we just dump every published object for the specified <self/> and return.

Definition at line 956 of file left_right.py.

10.111.3 Member Data Documentation

10.111.3.1 tuple rpki.left_right.list_published_objects_elt.attributes = ("self_handle", "tag", "uri") [static]

XML attributes for this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 951 of file left_right.py.

10.115.1 Detailed Description

```
<parent/> element.
```

Definition at line 633 of file left_right.py.

10.115.2 Member Function Documentation

10.115.2.1 def rpki.left_right.parent_elt.cas (self)

Fetch all CA objects that link to this parent object.

Definition at line 660 of file left_right.py.

10.115.2.2 def rpki.left_right.parent_elt.query_up_down (self, q_pdu, cb, eb)

Client code for sending one up-down query PDU to this parent.

Definition at line 736 of file left_right.py.

10.115.2.3 def rpki.left_right.parent_elt.repository (self)

Fetch repository object to which this parent object links.

Definition at line 656 of file left_right.py.

10.115.2.4 def rpki.left_right.parent_elt.serve_post_save_hook (self, q_pdu, r_pdu, cb, eb)

Extra server actions for parent_elt.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 664 of file left_right.py.

10.115.2.5 def rpki.left_right.parent_elt.serve_rekey (self, cb, eb)

Handle a left-right rekey action for this parent.

Definition at line 680 of file left_right.py.

10.115.2.6 def rpki.left_right.parent_elt.serve_revoke (self, cb, eb)

Handle a left-right revoke action for this parent.

Definition at line 688 of file left_right.py.

10.115.2.7 def rpki.left_right.parent_elt.serve_revoke_forgotten (self, cb, eb)

Handle a left-right revoke_forgotten action for this parent.

This is a bit fiddly: we have to compare the result of an up-down list query with what we have locally and identify the SKIs of any certificates that have gone missing. This should never happen in ordinary operation, but can arise if we have somehow lost a private key, in which case there is nothing more we can do with the issued cert, so we have to clear it. As this really is not supposed to happen, we don't clear it automatically, instead we require an explicit trigger.

Definition at line 696 of file left_right.py.

- tuple sql_template

10.117.1 Detailed Description

```
<repository/> element.
```

Definition at line 553 of file left_right.py.

10.117.2 Member Function Documentation

10.117.2.1 def rpki.left_right.repository_elt.call_pubd (self, callback, errback, q_msg, handlers = { })

Send a message to publication daemon and return the response.

As a convenience, attempting to send an empty message returns immediate success without sending anything.

Handlers is a dict of handler functions to process the response PDUs. If the tag value in the response PDU appears in the dict, the associated handler is called to process the PDU. If no tag matches, default_pubd_handler() is called. A handler value of False suppresses calling of the default handler.

Definition at line 581 of file left_right.py.

10.117.2.2 def rpki.left_right.repository_elt.default_pubd_handler (pdu)

Default handler for publication response PDUs.

Definition at line 575 of file left_right.py.

10.117.2.3 def rpki.left_right.repository_elt.parents (self)

Fetch all parent objects that link to this repository object.

Definition at line 570 of file left_right.py.

10.119.1 Detailed Description

<self/> element.

Definition at line 124 of file left_right.py.

10.119.2 Member Function Documentation

10.119.2.1 def rpki.left_right.self_elt.bscs (self)

Fetch all BSC objects that link to this self object.

Definition at line 145 of file left_right.py.

10.119.2.2 def rpki.left_right.self_elt.children (self)

Fetch all child objects that link to this self object.

Definition at line 157 of file left_right.py.

10.119.2.3 def rpki.left_right.self_elt.client_poll (self, callback)

Run the regular client poll cycle with each of this self's parents in turn

Definition at line 298 of file left_right.py.

10.119.2.4 def rpki.left_right.self_elt.cron (self, cb)

Periodic tasks.

Definition at line 274 of file left_right.py.

10.119.2.5 def rpki.left_right.self_elt.parents (self)

Fetch all parent objects that link to this self object.

Definition at line 153 of file left_right.py.

10.119.2.6 def rpki.left_right.self_elt.regenerate_crls_and_manifests (self, cb)

Generate new CRLs and manifests as necessary for all of this self's CAs. Extracting nextUpdate from a manifest is hard at the moment due to implementation silliness, so for now we generate a new manifest whenever we generate a new CRL

This method also cleans up tombstones left behind by revoked ca_detail objects, since we're walking through the relevant portions of the database anyway.

Definition at line 415 of file left_right.py.

10.119.2.7 def rpki.left_right.self_elt.repositories (self)

Fetch all repository objects that link to this self object.

Definition at line 149 of file left_right.py.

10.119.2.8 def rpki.left_right.self_elt.roas (self)

Fetch all ROA objects that link to this self object.

Definition at line 161 of file left_right.py.

10.119.2.9 def rpki.left_right.self_elt.serve_fetch_all (self)

Find the self objects upon which a list action should operate. This is different from the list action for all other objects, where list only works within a given self_id context.

Reimplemented from rpki.left_right.data_elt.

Definition at line 266 of file left_right.py.

10.119.2.10 def rpki.left_right.self_elt.serve_fetch_handle (cls, gctx, self_id, self_handle)

Find a self object based on its self_handle.

Reimplemented from rpki.left_right.data_elt.

Definition at line 260 of file left_right.py.

10.119.2.11 def rpki.left_right.self_elt.serve_fetch_one_maybe (self)

Find the self object upon which a get, set, or destroy action should operate, or which would conflict with a create method.

Reimplemented from rpki.left_right.data_elt.

Definition at line 252 of file left_right.py.

10.119.2.12 def rpki.left_right.self_elt.serve_post_save_hook ($self, q_pdu$, r_pdu , cb, eb)

Extra server actions for self_elt.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 165 of file left_right.py.

10.119.2.13 def rpki.left_right.self_elt.serve_publish_world_now (self, cb, eb)

Handle a left-right publish_world_now action for this self.

The publication stuff needs refactoring, right now publication is interleaved with local operations in a way that forces far too many bounces through the task system for any complex update. The whole thing ought to be rewritten to queue up outgoing publication

PDUs and only send them when we're all done or when we need to force publication at a particular point in a multi-phase operation.

Once that reorganization has been done, this method should be rewritten to reuse the low-level publish() methods that each object will have...but we're not there yet. So, for now, we just do this via brute force. Think of it as a trial version to see whether we've identified everything that needs to be republished for this operation.

Definition at line 213 of file left_right.py.

10.119.2.14 def rpki.left_right.self_elt.serve_rekey (self, cb, eb)

Handle a left-right rekey action for this self.

Definition at line 186 of file left_right.py.

10.119.2.15 def rpki.left_right.self_elt.serve_revoke (self, cb, eb)

Handle a left-right revoke action for this self.

Definition at line 195 of file left_right.py.

10.119.2.16 def rpki.left_right.self_elt.serve_revoke_forgotten (self, cb, eb)

Handle a left-right revoke_forgotten action for this self.

Definition at line 204 of file left_right.py.

10.119.2.17 def rpki.left_right.self_elt.serve_run_now (self, cb, eb)

Handle a left-right run_now action for this self.

Definition at line 245 of file left_right.py.

10.119.2.18 def rpki.left_right.self_elt.update_children (self, cb)

Check for updated IRDB data for all of this self's children and issue new certs as necessary. Must handle changes both in resources and in expiration date.

Definition at line 353 of file left_right.py.

10.119.2.19 def rpki.left_right.self_elt.update_roas (self, cb)

Generate or update ROAs for this self.

Definition at line 455 of file left_right.py.

10.119.3 Member Data Documentation

Definition at line 285 of file publication.py.

10.124.2.2 rpki.publication.certificate_elt.payload_type = rpki.x509.X509 [static]

Reimplemented from rpki.publication.publication_object_elt.

Definition at line 286 of file publication.py.

The documentation for this class was generated from the following file:

• publication.py (2876)

10.125 rpki.publication.client_elt Class Reference

Inherits rpki::publication::control_elt.

Inherited by irbe_cli.client_elt.

Public Member Functions

- def check_allowed_uri
- def endElement
- def serve_fetch_all
- def serve_fetch_one_maybe
- def serve_post_save_hook

Static Public Attributes

- tuple attributes = ("action", "tag", "client_handle", "base_uri")

 XML attributes for this element.
- base_uri = None
- bpki cert = None
- bpki_glue = None
- clear_https_ta_cache = False
- string element name = "client"
- tuple elements = ("bpki_cert", "bpki_glue")

XML elements contained by this element.

• tuple sql_template = rpki.sql.template("client", "client_id", "client_handle", "base_uri", ("bpki_cert", rpki.x509.X509), ("bpki_glue", rpki.x509.X509))

10.125.1 Detailed Description

```
<cli>element.
```

Definition at line 113 of file publication.py.

10.125.2 Member Function Documentation

10.125.2.1 def rpki.publication.client_elt.check_allowed_uri (self, uri)

Definition at line 160 of file publication.py.

10.125.2.2 def rpki.publication.client_elt.endElement (self, stack, name, text)

Handle subelements of <client/> element. These require special handling because modifying them invalidates the HTTPS trust anchor cache.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 130 of file publication.py.

10.125.2.3 def rpki.publication.client_elt.serve_fetch_all (self)

Find client objects on which a list method should operate.

Definition at line 156 of file publication.py.

10.125.2.4 def rpki.publication.client_elt.serve_fetch_one_maybe (self)

Find the client object on which a get, set, or destroy method should operate, or which would conflict with a create method.

Definition at line 149 of file publication.py.

10.125.2.5 def rpki.publication.client_elt.serve_post_save_hook ($self, q_pdu, r_pdu, cb, eb$)

Extra server actions for client_elt.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 140 of file publication.py.

10.127 rpki.publication.config_elt Class Reference

Inherits rpki::publication::control_elt.
Inherited by irbe_cli.config_elt.

Public Member Functions

- · def fetch
- def serve_fetch_one_maybe
- def serve_set
- · def startElement

Public Attributes

· config_id

Static Public Attributes

- tuple attributes = ("action", "tag")

 XML attributes for this element.
- string element_name = "config"
- tuple elements = ("bpki_crl",)

XML elements contained by this element.

- tuple sql_template = rpki.sql.template("config", "config_id", ("bpki_crl", rpki.x509.CRL))
- int wired_in_config_id = 1

10.127.1 Detailed Description

<config/> element. This is a little weird because there should never be more than one row in the SQL config table, but we have to put the BPKI CRL somewhere and SQL is the least bad place available.

So we reuse a lot of the SQL machinery, but we nail config_id at 1, we don't expose it in the XML protocol, and we only support the get and set actions.

Definition at line 61 of file publication.py.

10.127.2 Member Function Documentation

10.127.2.1 def rpki.publication.config_elt.fetch (cls, gctx)

Fetch the config object from SQL. This requires special handling because of the weird way we treat config_id.

Definition at line 89 of file publication.py.

10.127.2.2 def rpki.publication.config_elt.serve_fetch_one_maybe (self)

Find the config object on which a get or set method should operate.

Definition at line 106 of file publication.py.

10.127.2.3 def rpki.publication.config_elt.serve_set (self, r_msg, cb, eb)

Handle a set action. This requires special handling because config doesn't support the create method.

Reimplemented from rpki.xml_utils.data_elt.

Definition at line 96 of file publication.py.

10.127.2.4 def rpki.publication.config_elt.startElement (self, stack, name, attrs)

StartElement() handler for config object. This requires special handling because of the weird way we treat config_id.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 80 of file publication.py.

10.127.3 Member Data Documentation

10.127.3.1 tuple rpki.publication.config_elt.attributes = ("action", "tag") [static]

XML attributes for this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 72 of file publication.py.

10.127.3.2 rpki.publication.config_elt.config_id

Definition at line 86 of file publication.py.

10.127.3.3 string rpki.publication.config_elt.element_name = "config" [static]

Definition at line 73 of file publication.py.

10.127.3.4 tuple rpki.publication.config_elt.elements = ("bpki_crl",) [static]

XML elements contained by this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 74 of file publication.py.

10.127.3.5 tuple rpki.publication.config_elt.sql_template = rpki.sql.template("config", "config_id", ("bpki_crl", rpki.x509.CRL)) [static]

Definition at line 76 of file publication.py.

10.127.3.6 int rpki.publication.config_elt.wired_in_config_id = 1 [static]

Definition at line 78 of file publication.py.

- def make_publish
- · def make withdraw
- def raise_if_error
- · def serve_dispatch
- def serve_publish
- def serve_withdraw
- def toXML
- def uri_to_filename

Static Public Attributes

- tuple attributes = ("action", "tag", "client_handle", "uri")

 XML attributes for this element.
- payload = None
- payload_type = None

10.133.1 Detailed Description

Virtual class for publishable objects. These have very similar syntax, differences lie in underlying datatype and methods. XML methods are a little different from the pattern used for objects that support the create/set/get/list/destroy actions, but publishable objects don't go in SQL either so these classes would be different in any case.

Definition at line 164 of file publication.py.

10.133.2 Member Function Documentation

10.133.2.1 def rpki.publication.publication_object_elt.endElement (self, stack, name, text)

Handle a publishable element element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 178 of file publication.py.

10.133.2.2 def rpki.publication.publication_object_elt.make_publish (cls, uri, obj, tag = None)

Construct a publication PDU.

Definition at line 259 of file publication.py.

10.133.2.3 def rpki.publication.publication_object_elt.make_withdraw (cls, uri, obj, tag = None)

Construct a withdrawal PDU.

Definition at line 267 of file publication.py.

10.133.2.4 def rpki.publication.publication_object_elt.raise_if_error (self)

No-op, since this is not a <report_error/> PDU.

Definition at line 274 of file publication.py.

10.133.2.5 def rpki.publication.publication_object_elt.serve_dispatch (self, $r_msg,\ cb,\ eb$)

Action dispatch handler.

Definition at line 196 of file publication.py.

10.133.2.6 def rpki.publication.publication_object_elt.serve_publish (self)

Publish an object.

Definition at line 215 of file publication.py.

10.133.2.7 def rpki.publication.publication_object_elt.serve_withdraw (self)

Withdraw an object.

Definition at line 230 of file publication.py.

10.133.2.8 def rpki.publication.publication_object_elt.toXML (self)

Generate XML element for publishable object.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 187 of file publication.py.

10.133.2.9 def rpki.publication.publication_object_elt.uri_to_filename (self)

Convert a URI to a local filename.

Definition at line 244 of file publication.py.

10.133.3 Member Data Documentation

10.133.3.1 tuple rpki.publication.publication_object_elt.attributes = ("action", "tag", "client_handle", "uri") [static]

XML attributes for this element.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 174 of file publication.py.

10.133.3.2 rpki.publication.publication_object_elt.payload = None [static]

Definition at line 176 of file publication.py.

10.133.3.3 rpki.publication_object_elt.payload_type = None [static]

Reimplemented in rpki.publication.certificate_elt, rpki.publication.manifest_elt, and rpki.publication.roa_elt.

Definition at line 175 of file publication.py.

The documentation for this class was generated from the following file:

• publication.py (2876)

10.134 rpki.publication.report_error_elt Class Reference

Definition at line 644 of file resource_set.py.

10.137.2.5 def rpki.resource_set.resource_bag.empty (self)

True iff all resource sets in this bag are empty.

Definition at line 611 of file resource_set.py.

10.137.2.6 def rpki.resource_set.resource_bag.from_rfc3779_tuples (cls, exts)

Build a resource_bag from intermediate form generated by RFC 3779 ASN.1 decoder.

Definition at line 588 of file resource_set.py.

10.137.2.7 def rpki.resource_set.resource_bag.intersection (self, other)

Compute intersection with another resource_bag. valid_until attribute (if any) inherits from self.

Definition at line 624 of file resource_set.py.

10.137.2.8 def rpki.resource_set.resource_bag.oversized (self, other)

True iff self is oversized with respect to other.

Definition at line 571 of file resource_set.py.

10.137.2.9 def rpki.resource_set.resource_bag.undersized (self, other)

True iff self is undersized with respect to other.

Definition at line 579 of file resource_set.py.

10.137.2.10 def rpki.resource_set.resource_bag.union (self, other)

Compute union with another resource_bag. valid_until attribute (if any) inherits from self.

Definition at line 634 of file resource_set.py.

10.137.3 Member Data Documentation

10.137.3.1 rpki::resource_set.resource_bag::asn

Set of Autonomous System Number resources.

Definition at line 566 of file resource_set.py.

10.137.3.2 rpki::resource_set.resource_bag::v4

Set of IPv4 resources.

Definition at line 567 of file resource_set.py.

10.137.3.3 rpki::resource_set.resource_bag::v6

Set of IPv6 resources.

Definition at line 568 of file resource_set.py.

10.137.3.4 rpki::resource_set.resource_bag::valid_until

Expiration date of resources, for setting certificate notAfter field.

Definition at line 569 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.138 rpki.resource_set.resource_range Class Reference

Inherits object.

Inherited by rpki.resource_set.resource_range_as, and rpki.resource_set.resource_range_ip.

Public Member Functions

- def __cmp__
- def __init__

Public Attributes

- max
- min

10.138.1 Detailed Description

Generic resource range type. Assumes underlying type is some kind of integer.

This is a virtual class. You probably don't want to use this type directly.

Definition at line 50 of file resource_set.py.

10.138.2 Member Function Documentation

10.138.2.1 def rpki.resource_set.resource_range.__cmp__ (self, other)

Compare two resource_range objects.

Definition at line 67 of file resource_set.py.

10.138.2.2 def rpki.resource_set.resource_range.__init__ (self, min, max)

Initialize and sanity check a resource_range.

Definition at line 59 of file resource_set.py.

10.138.3 Member Data Documentation

10.138.3.1 rpki.resource_set.resource_range.max

Definition at line 65 of file resource_set.py.

10.138.3.2 rpki.resource_set.resource_range.min

Reimplemented in rpki.resource_set.resource_range_as.

Definition at line 64 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.139 rpki.resource_set.resource_range_as Class Reference

Inherits rpki::resource_set::resource_range.

Public Member Functions

- def __str_
- def to_rfc3779_tuple

Public Attributes

• min

Static Public Attributes

• datum_type = long

Type of underlying data (min and max).

10.139.1 Detailed Description

Range of Autonomous System Numbers.

Denotes a single ASN by a range whose \min and \max values are identical.

Definition at line 78 of file resource_set.py.

10.139.2 Member Function Documentation

10.139.2.1 def rpki.resource_set.resource_range_as.__str__ (self)

Convert a resource_range_as to string format.

Definition at line 91 of file resource_set.py.

10.139.2.2 def rpki.resource_set.resource_range_as.to_rfc3779_tuple (self)

Convert a resource_range_as to tuple format for RFC 3779 ASN.1 encoding.

Definition at line 100 of file resource_set.py.

10.139.3 Member Data Documentation

10.139.3.1 rpki::resource_set.resource_range_as::datum_type = long [static]

Type of underlying data (min and max).

Definition at line 89 of file resource_set.py.

10.139.3.2 rpki.resource_set.resource_range_as.min

Reimplemented from rpki.resource_set.resource_range.

Definition at line 95 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.140 rpki.resource_set.resource_range_ip Class Reference

Inherits rpki::resource_set::resource_range.

Inherited by rpki.resource_set.resource_range_ipv4, and rpki.resource_set.resource_range_ipv6.

Public Member Functions

- def __str__
- def make_prefix
- def to_rfc3779_tuple

Private Member Functions

• def _prefixlen

10.140.1 Detailed Description

```
Range of (generic) IP addresses.
```

Prefixes are converted to ranges on input, and ranges that can be represented as prefixes are written as prefixes on output.

This is a virtual class. You probably $\mbox{don't}$ want to use it directly.

Definition at line 109 of file resource_set.py.

10.140.2 Member Function Documentation

10.140.2.1 def rpki.resource_set.resource_range_ip.__str__ (self)

Convert a resource_range_ip to string format.

Definition at line 137 of file resource_set.py.

10.140.2.2 def rpki.resource_set.resource_range_ip._prefixlen (self) [private]

Determine whether a resource_range_ip can be expressed as a prefix.

Definition at line 120 of file resource_set.py.

10.140.2.3 def rpki.resource_set.resource_range_ip.make_prefix (cls, prefix, prefixlen)

Construct a resource range corresponding to a prefix.

Definition at line 160 of file resource set.py.

10.140.2.4 def rpki.resource set.resource range ip.to rfc3779 tuple (self)

Convert a resource_range_ip to tuple format for RFC 3779 ASN.1 encoding.

Definition at line 147 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.141 rpki.resource_set.resource_range_ipv4 Class Reference

Inherits rpki::resource_set::resource_range_ip.

Static Public Attributes

datum_type = rpki.ipaddrs.v4addr
 Type of underlying data (min and max).

10.141.1 Detailed Description

Range of IPv4 addresses.

Definition at line 170 of file resource_set.py.

10.141.2 Member Data Documentation

10.141.2.1 rpki::resource_set.resource_range_ipv4::datum_type = rpki.ipaddrs.v4addr [static]

Type of underlying data (min and max).

Definition at line 178 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.142 rpki.resource_set.resource_range_ipv6 Class Reference

Inherits rpki::resource_set::resource_range_ip.

Static Public Attributes

• datum_type = rpki.ipaddrs.v6addr

Type of underlying data (min and max).

10.142.1 Detailed Description

Range of IPv6 addresses.

Definition at line 180 of file resource_set.py.

10.142.2 Member Data Documentation

10.142.2.1 rpki::resource_set.resource_range_ipv6::datum_type = rpki.ipaddrs.v6addr [static]

Type of underlying data (min and max).

Definition at line 188 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.143 rpki.resource_set.resource_set Class Reference

Inherits list.

Inherited by rpki.resource_set.resource_set_as, and rpki.resource_set.resource_set_ip.

Public Member Functions

- def __init__
- def str
- def contains
- def difference
- def from_sql
- def intersection
- def issubset
- def issuperset
- def symmetric_difference
- def union

Static Public Attributes

• inherit = False

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

Private Member Functions

• def _comm

10.143.1 Detailed Description

Generic resource set, a list subclass containing resource ranges.

This is a virtual class. You probably $\mbox{dom't}$ want to use it directly.

Definition at line 206 of file resource set.py.

10.143.2 Member Function Documentation

10.143.2.1 def rpki.resource_set.resource_set.__init__ (self, ini = None)

Initialize a resource_set.

Definition at line 219 of file resource_set.py.

10.143.2.2 def rpki.resource_set.resource_set.__str__ (self)

Convert a resource_set to string format.

Definition at line 246 of file resource_set.py.

10.143.2.3 def rpki.resource_set.resource_set._comm (self, other) [private]

Like comm(1), sort of.

Returns a tuple of three resource sets: resources only in self, resources only in other, and resources in both. Used (not very efficiently) as the basis for most set operations on resource sets.

Definition at line 255 of file resource_set.py.

10.143.2.4 def rpki.resource_set.resource_set.contains (self, item)

Set membership test for resource sets.

Definition at line 332 of file resource_set.py.

10.143.2.5 def rpki.resource_set.resource_set.difference (self, other)

Set difference for resource sets.

Definition at line 323 of file resource_set.py.

10.143.2.6 def rpki.resource_set.resource_set.from_sql (cls, sql, query, args = None)

Create resource set from an SQL query.

sql is an object that supports execute() and fetchall() methods like a DB API $2.0\ \mathrm{cursor}$ object.

query is an SQL query that returns a sequence of (min, max) pairs.

Definition at line 369 of file resource_set.py.

10.143.2.7 def rpki.resource_set.resource_set.intersection (self, other)

Set intersection for resource sets.

Definition at line 319 of file resource_set.py.

10.143.2.8 def rpki.resource_set.resource_set.issubset (self, other)

Test whether self is a subset (possibly improper) of other.

Definition at line 355 of file resource set.py.

10.143.2.9 def rpki.resource_set.resource_set.issuperset (self, other)

Test whether self is a superset (possibly improper) of other.

Definition at line 364 of file resource_set.py.

10.143.2.10 def rpki.resource_set.resource_set.symmetric_difference (self, other)

Set symmetric difference (XOR) for resource sets.

Definition at line 327 of file resource_set.py.

10.143.2.11 def rpki.resource_set.union (self, other)

Set union for resource sets.

Definition at line 288 of file resource_set.py.

10.143.3 Member Data Documentation

10.143.3.1 rpki::resource_set.resource_set::inherit = False [static]

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

Reimplemented in rpki.resource_set_resource_set_as, and rpki.resource_set.resource_set_ip.

Definition at line 217 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.144 rpki.resource_set.resource_set_as Class Reference

Inherits rpki::resource_set::resource_set.

Public Member Functions

- def parse_rfc3779_tuple
- def parse_str
- def to_rfc3779_tuple

Public Attributes

• inherit

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

Static Public Attributes

• range_type = resource_range_as

Type of range underlying this type of resource_set.

10.144.1 Detailed Description

Autonomous System Number resource set.

Definition at line 384 of file resource_set.py.

10.144.2 Member Function Documentation

10.144.2.1 def rpki.resource_set.resource_set_as.parse_rfc3779_tuple (self, x)

Parse ASN resource from tuple format generated by RFC 3779 ASN.1 decoder.

Definition at line 404 of file resource_set.py.

10.144.2.2 def rpki.resource_set_resource_set_as.parse_str (self, x)

Parse ASN resource sets from text (eg, XML attributes).

Definition at line 394 of file resource_set.py.

10.144.2.3 def rpki.resource_set_as.to_rfc3779_tuple (self)

Convert ASN resource set into tuple format used for RFC 3779 ASN.1 encoding.

Definition at line 422 of file resource_set.py.

10.144.3 Member Data Documentation

10.144.3.1 rpki.resource_set_resource_set_as.inherit

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

Reimplemented from rpki.resource_set.resource_set.

Definition at line 420 of file resource_set.py.

10.144.3.2 rpki::resource_set_resource_set_as::range_type = resource_range_as [static]

Type of range underlying this type of resource_set.

Definition at line 392 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.145 rpki.resource_set.resource_set_ip Class Reference

Inherits rpki::resource_set::resource_set.

Inherited by rpki.resource_set_resource_set_ipv4, and rpki.resource_set.resource_set_ipv6.

Public Member Functions

- def parse_rfc3779_tuple
- def parse str
- def to_rfc3779_tuple

Public Attributes

• inherit

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

10.145.1 Detailed Description

(Generic) IP address resource set.

This is a virtual class. You probably don't want to use it directly.

Definition at line 434 of file resource_set.py.

10.145.2 Member Function Documentation

10.145.2.1 def rpki.resource_set.resource_set_ip.parse_rfc3779_tuple (self, x)

Parse IP address resource sets from tuple format generated by RFC 3779 ASN.1 decoder.

Definition at line 454 of file resource_set.py.

10.145.2.2 def rpki.resource_set_resource_set_ip.parse_str (self, x)

Parse IP address resource sets from text (eg, XML attributes).

Definition at line 442 of file resource_set.py.

10.145.2.3 def rpki.resource_set.resource_set_ip.to_rfc3779_tuple (self)

Convert IP resource set into tuple format used by RFC 3779 ASN.1 encoder.

Definition at line 472 of file resource_set.py.

10.145.3 Member Data Documentation

10.145.3.1 rpki.resource_set_resource_set_ip.inherit

Boolean indicating whether this resource_set uses RFC 3779 inheritance.

Reimplemented from rpki.resource_set.resource_set.

Definition at line 470 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.146 rpki.resource_set.resource_set_ipv4 Class Reference

Inherits rpki::resource_set::resource_set_ip.

Static Public Attributes

- string afi = "\x00\x01"
 Address Family Identifier value for IPv4.
- range_type = resource_range_ipv4

 Type of range underlying this type of resource_set.

10.146.1 Detailed Description

```
IPv4 address resource set.
```

Definition at line 484 of file resource_set.py.

10.146.2 Member Data Documentation

10.146.2.1 rpki::resource_set.resource_set_ipv4::afi = "\x00\x01" [static]

Address Family Identifier value for IPv4.

Definition at line 497 of file resource_set.py.

10.146.2.2 rpki::resource_set.resource_set_ipv4::range_type = resource_range_ipv4 [static]

Type of range underlying this type of resource_set.

Definition at line 492 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.147 rpki.resource_set.resource_set_ipv6 Class Reference

Inherits rpki::resource_set::resource_set_ip.

Static Public Attributes

- string afi = "\x00\x02"
 Address Family Identifier value for IPv6.
- range_type = resource_range_ipv6

 Type of range underlying this type of resource_set.

10.147.1 Detailed Description

IPv6 address resource set.

Definition at line 499 of file resource_set.py.

10.147.2 Member Data Documentation

10.147.2.1 rpki::resource_set.resource_set_ipv6::afi = " \times 00 \times 02" [static]

Address Family Identifier value for IPv6.

Definition at line 512 of file resource_set.py.

10.147.2.2 rpki::resource_set.resource_set_ipv6::range_type = resource range ipv6 [static]

Type of range underlying this type of resource_set.

Definition at line 507 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.148 rpki.resource_set.roa_prefix Class Reference

Inherits object.

Inherited by rpki.resource_set.roa_prefix_ipv4, and rpki.resource_set.roa_prefix_ipv6.

Public Member Functions

- def <u>__cmp___</u>
- def __init__
- def __str__
- def max
- def min
- def to_resource_range
- def to_roa_tuple

Public Attributes

• max_prefixlen

Maxmimum prefix length.

• prefix

The prefix itself, an IP address with bits beyond the prefix length zeroed.

prefixlen

(Minimum) prefix length.

10.148.1 Detailed Description

ROA prefix. This is similar to the resource_range_ip class, but differs in that it only represents prefixes, never ranges, and includes the maximum prefix length as an additional value.

This is a virtual class, you probably don't want to use it directly.

Definition at line 666 of file resource_set.py.

10.148.2 Member Function Documentation

10.148.2.1 def rpki.resource_set.roa_prefix.__cmp__ (self, other)

Compare two ROA prefix objects. Comparision is based on prefix, prefixlen, and max_prefixlen, in that order.

Definition at line 697 of file resource_set.py.

10.148.2.2 def rpki.resource_set.roa_prefix.__init__ (self, prefix, prefixlen, max_prefixlen = None)

Initialize a ROA prefix. max_prefixlen is optional and defaults to prefixlen. max_prefixlen must not be smaller than prefixlen.

Definition at line 685 of file resource_set.py.

10.148.2.3 def rpki.resource_set.roa_prefix.__str__ (self)

Convert a ROA prefix to string format.

Definition at line 710 of file resource_set.py.

10.148.2.4 def rpki.resource_set.roa_prefix.max (self)

Return highest address covered by prefix.

Definition at line 731 of file resource_set.py.

10.148.2.5 def rpki.resource_set.roa_prefix.min (self)

Return lowest address covered by prefix.

Definition at line 727 of file resource_set.py.

10.148.2.6 def rpki.resource_set.roa_prefix.to_resource_range (self)

Convert this ROA prefix to the equivilent resource_range_ip object. This is an irreversable transformation because it loses the max_prefixlen attribute, nothing we can do about that.

Definition at line 719 of file resource_set.py.

10.148.2.7 def rpki.resource_set.roa_prefix.to_roa_tuple (self)

Convert a resource_range_ip to tuple format for ROA ASN.1 encoding.

Definition at line 738 of file resource_set.py.

10.148.3 Member Data Documentation

10.148.3.1 rpki::resource_set.roa_prefix::max_prefixlen

Maxmimum prefix length.

Definition at line 695 of file resource_set.py.

10.148.3.2 rpki::resource_set.roa_prefix::prefix

The prefix itself, an IP address with bits beyond the prefix length zeroed.

Definition at line 693 of file resource_set.py.

10.148.3.3 rpki::resource_set.roa_prefix::prefixlen

(Minimum) prefix length.

Definition at line 694 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.149 rpki.resource_set.roa_prefix_ipv4 Class Reference

Inherits rpki::resource_set::roa_prefix.

Static Public Attributes

• range_type = resource_range_ipv4

Type of corresponding resource_range_ip.

10.149.1 Detailed Description

```
IPv4 ROA prefix.
```

Definition at line 746 of file resource_set.py.

10.149.2 Member Data Documentation

```
10.149.2.1 rpki::resource_set.roa_prefix_ipv4::range_type = resource_range_ipv4 [static]
```

Type of corresponding resource_range_ip.

Definition at line 754 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.150 rpki.resource_set.roa_prefix_ipv6 Class Reference

Inherits rpki::resource_set::roa_prefix.

Static Public Attributes

range_type = resource_range_ipv6
 Type of corresponding resource_range_ip.

10.150.1 Detailed Description

IPv6 ROA prefix.

Definition at line 756 of file resource_set.py.

10.150.2 Member Data Documentation

10.150.2.1 rpki::resource_set.roa_prefix_ipv6::range_type = resource_range_ipv6 [static]

Type of corresponding resource_range_ip.

Definition at line 764 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.151 rpki.resource_set.roa_prefix_set Class Reference

Inherits list.

Inherited by rpki.resource_set.roa_prefix_set_ipv4, and rpki.resource_set.roa_prefix_set_ipv6.

Public Member Functions

- def init
- def __str__
- def from_sql
- def parse_str
- def to_resource_set
- def to_roa_tuple

10.151.1 Detailed Description

Set of ROA prefixes, analogous to the resource_set_ip class.

Definition at line 766 of file resource_set.py.

10.151.2 Member Function Documentation

10.151.2.1 def rpki.resource_set.roa_prefix_set.__init__ (self, ini = None)

Initialize a ROA prefix set.

Definition at line 771 of file resource_set.py.

10.151.2.2 def rpki.resource_set.roa_prefix_set.__str__ (self)

Convert a ROA prefix set to string format.

Definition at line 791 of file resource_set.py.

10.151.2.3 def rpki.resource_set.roa_prefix_set.from_sql (cls, sql, query, args = None)

Create ROA prefix set from an SQL query.

sql is an object that supports execute() and fetchall() methods like a DB API 2.0 cursor object.

query is an SQL query that returns a sequence of (prefix, prefixlen, max_prefixlen) triples.

Definition at line 825 of file resource_set.py.

10.151.2.4 def rpki.resource_set.roa_prefix_set.parse_str (self, x)

Parse ROA prefix from text (eg, an XML attribute).

Definition at line 795 of file resource_set.py.

10.151.2.5 def rpki.resource_set.roa_prefix_set.to_resource_set (self)

Convert a ROA prefix set to a resource set. This is an irreversable transformation. We have to compute a union here because ROA prefix sets can include overlaps, while RFC 3779 resource sets cannot. This is ugly, and there is almost certainly a more efficient way to do this, but start by getting the output right before worrying about making it fast or pretty.

Definition at line 807 of file resource_set.py.

10.151.2.6 def rpki.resource_set.roa_prefix_set.to_roa_tuple (self)

```
Convert ROA prefix set into tuple format used by ROA ASN.1 encoder. This is a variation on the format used in RFC 3779.
```

Definition at line 840 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.152 rpki.resource_set.roa_prefix_set_ipv4 Class Reference

Inherits rpki::resource_set::roa_prefix_set.

Static Public Attributes

- prefix_type = roa_prefix_ipv4

 Type of underlying roa_prefix.
- resource_set_type = resource_set_ipv4

 Type of corresponding resource_set_ip class.

10.152.1 Detailed Description

```
Set of IPv4 ROA prefixes.
```

Definition at line 850 of file resource_set.py.

10.152.2 Member Data Documentation

10.152.2.1 rpki::resource_set.roa_prefix_set_ipv4::prefix_type = roa_prefix_ipv4 [static]

Type of underlying roa_prefix.

Definition at line 858 of file resource_set.py.

10.152.2.2 rpki::resource_set.roa_prefix_set_ipv4::resource_set_type = resource_set_ipv4 [static]

Type of corresponding resource_set_ip class.

Definition at line 863 of file resource_set.py.

The documentation for this class was generated from the following file:

• resource_set.py (2776)

10.153 rpki.resource_set.roa_prefix_set_ipv6 Class Reference

Inherits rpki::resource_set::roa_prefix_set.

Static Public Attributes

- prefix_type = roa_prefix_ipv6

 Type of underlying roa_prefix.
- resource_set_type = resource_set_ipv6

 Type of corresponding resource_set_ip class.

10.153.1 Detailed Description

```
Set of IPv6 ROA prefixes.
```

Definition at line 865 of file resource_set.py.

10.153.2 Member Data Documentation

10.153.2.1 rpki::resource_set.roa_prefix_set_ipv6::prefix_type = roa_prefix_ipv6 [static]

Type of underlying roa_prefix.

Definition at line 873 of file resource_set.py.

10.153.2.2 rpki::resource_set.roa_prefix_set_ipv6::resource_set_type = resource_set_ipv6 [static]

Type of corresponding resource_set_ip class.

Definition at line 878 of file resource_set.py.

10.159.1 Detailed Description

Internal CA detail object.

Definition at line 549 of file rpki_engine.py.

10.159.2 Member Function Documentation

10.159.2.1 def rpki.rpki_engine.ca_detail_obj.activate (self, ca, cert, uri, callback, errback, predecessor = None)

Activate this ca_detail.

Definition at line 611 of file rpki_engine.py.

10.159.2.2 def rpki.rpki_engine.ca_detail_obj.ca (self)

Fetch CA object to which this ca_detail links.

Definition at line 583 of file rpki_engine.py.

10.159.2.3 def rpki.rpki_engine.ca_detail_obj.child_certs (self, child = None, ski = None, unique = False)

Fetch all child_cert objects that link to this ca_detail.

Definition at line 587 of file rpki_engine.py.

10.159.2.4 def rpki.rpki_engine.ca_detail_obj.create (cls, ca)

Create a new ca_detail object for a specified CA.

Definition at line 743 of file rpki_engine.py.

10.159.2.5 def rpki.rpki_engine.ca_detail_obj.crl_published_callback (self, pdu)

Check result of CRL publication.

Definition at line 866 of file rpki_engine.py.

10.159.2.6 def rpki.rpki_engine.ca_detail_obj.crl_uri (self, ca)

Return publication URI for this ca_detail's CRL.

Definition at line 599 of file rpki_engine.py.

10.159.2.7 def rpki.rpki_engine.ca_detail_obj.crl_uri_tail (self)

Return tail (filename portion) of publication URI for this ca_detail's CRL.

Definition at line 603 of file rpki_engine.py.

10.159.2.8 def rpki.rpki_engine.ca_detail_obj.delete (self, ca, publisher, allow failure = False)

Delete this ca_detail and all of the certs it issued.

If allow_failure is true, we clean up as much as we can but $\mbox{don't}$ raise an exception.

Definition at line 636 of file rpki_engine.py.

10.159.2.9 def rpki.rpki_engine.ca_detail_obj.generate_crl (self, publisher, nextUpdate = None)

Generate a new CRL for this ca_detail. At the moment this is unconditional, that is, it is up to the caller to decide whether a new CRL is needed.

Definition at line 830 of file rpki_engine.py.

10.159.2.10 def rpki.rpki_engine.ca_detail_obj.generate_manifest (self, publisher, nextUpdate = None)

Generate a new manifest for this ca_detail.

Definition at line 874 of file rpki_engine.py.

10.159.2.11 def rpki.rpki_engine.ca_detail_obj.generate_manifest_cert (self, ca)

Generate a new manifest certificate for this ca_detail.

Definition at line 778 of file rpki_engine.py.

10.159.2.12 def rpki.rpki_engine.ca_detail_obj.issue (self, ca, child, subject_key, sia, resources, publisher, child_cert = None)

Issue a new certificate to a child. Optional child_cert argument specifies an existing child_cert object to update in place; if not specified, we create a new one. Returns the child_cert object containing the newly issued cert.

Definition at line 790 of file rpki_engine.py.

10.159.2.13 def rpki.rpki_engine.ca_detail_obj.issue_ee (self, ca, resources, subject_key, sia = None)

Issue a new EE certificate.

Definition at line 761 of file rpki_engine.py.

10.159.2.14 def rpki.rpki_engine.ca_detail_obj.manifest_published_callback (self, pdu)

Check result of manifest publication.

Definition at line 908 of file rpki_engine.py.

10.159.2.15 def rpki.rpki_engine.ca_detail_obj.manifest_uri (self, ca)

Return publication URI for this ca_detail's manifest.

Definition at line 607 of file rpki_engine.py.

10.159.2.16 def rpki.rpki_engine.ca_detail_obj.revoke (self, cb, eb)

Request revocation of all certificates whose SKI matches the key for this ca_detail.

Tasks:

- Request revocation of old keypair by parent.
- Revoke all child certs issued by the old keypair.
- Generate a final CRL, signed with the old keypair, listing all the revoked certs, with a next CRL time after the last cert or CRL signed by the old keypair will have expired.
- Generate a corresponding final manifest.
- Destroy old keypairs.
- Leave final CRL and manifest in place until their nextupdate time has passed.

Definition at line 658 of file rpki_engine.py.

10.159.2.17 def rpki.rpki_engine.ca_detail_obj.revoked_certs (self)

Fetch all revoked_cert objects that link to this ca_detail.

Definition at line 591 of file rpki_engine.py.

10.159.2.18 def rpki.rpki_engine.ca_detail_obj.roas (self)

Fetch all ROA objects that link to this ca_detail.

Definition at line 595 of file rpki_engine.py.

10.159.2.19 def rpki.rpki_engine.ca_detail_obj.sql_decode (self, vals)

Extra assertions for SQL decode of a ca_detail_obj.

Reimplemented from rpki.sql.sql_persistent.

Definition at line 575 of file rpki_engine.py.

10.159.2.20 def rpki.rpki_engine.ca_detail_obj.update (self, parent, ca, rc, sia_uri_changed, old_resources, callback, errback)

Need to get a new certificate for this ca_detail and perhaps frob children of this ca_detail.

Definition at line 718 of file rpki_engine.py.

10.159.3 Member Data Documentation

10.159.3.1 rpki_engine.ca_detail_obj.ca_cert_uri

10.160.1 Detailed Description

Internal CA object.

Definition at line 299 of file rpki_engine.py.

10.160.2 Member Function Documentation

10.160.2.1 def rpki.rpki_engine.ca_obj.ca_details (self)

Fetch all ca_detail objects that link to this CA object.

Definition at line 321 of file rpki_engine.py.

10.160.2.2 def rpki.rpki_engine.ca_obj.check_for_updates (self, parent, rc, cb, eb)

Parent has signaled continued existance of a resource class we already knew about, so we need to check for an updated certificate, changes in resource coverage, revocation and reissue with the same key, etc.

Definition at line 362 of file rpki_engine.py.

10.160.2.3 def rpki.rpki_engine.ca_obj.construct_sia_uri (self, parent, rc)

Construct the sia_uri value for this CA given configured information and the parent's up-down protocol list_response PDU.

Definition at line 349 of file rpki_engine.py.

10.160.2.4 def rpki.rpki_engine.ca_obj.create (cls, parent, rc, cb, eb)

Parent has signaled existance of a new resource class, so we need to create and set up a corresponding CA object.

Definition at line 438 of file rpki_engine.py.

10.160.2.5 def rpki.rpki_engine.ca_obj.delete (self, parent, callback)

The list of current resource classes received from parent does not include the class corresponding to this CA, so we need to delete it (and its little dog too...).

All certs published by this CA are now invalid, so need to withdraw them, the CRL, and the manifest from the repository, delete all child_cert and ca_detail records associated with this CA, then finally delete this CA itself.

Definition at line 462 of file rpki_engine.py.

10.160.2.6 def rpki.rpki_engine.ca_obj.fetch_active (self)

Fetch the active ca_detail for this CA, if any.

Definition at line 329 of file rpki_engine.py.

10.160.2.7 def rpki.rpki_engine.ca_obj.fetch_deprecated (self)

Fetch deprecated ca_details for this CA, if any.

Definition at line 333 of file rpki_engine.py.

10.160.2.8 def rpki.rpki_engine.ca_obj.fetch_issue_response_candidates (self)

Fetch ca_details which are candidates for consideration when processing an up-down issue_response PDU.

Definition at line 341 of file rpki_engine.py.

10.160.2.9 def rpki.rpki_engine.ca_obj.fetch_pending (self)

Fetch the pending ca_details for this CA, if any.

Definition at line 325 of file rpki_engine.py.

10.160.2.10 def rpki.rpki_engine.ca_obj.fetch_revoked (self)

Fetch revoked ca_details for this CA, if any.

Definition at line 337 of file rpki_engine.py.

10.160.2.11 def rpki.rpki_engine.ca_obj.next_crl_number (self)

Allocate a CRL serial number.

Definition at line 504 of file rpki_engine.py.

10.160.2.12 def rpki.rpki_engine.ca_obj.next_manifest_number (self)

Allocate a manifest serial number.

Definition at line 496 of file rpki_engine.py.

10.160.2.13 def rpki.rpki_engine.ca_obj.next_serial_number (self)

Allocate a certificate serial number.

Definition at line 488 of file rpki_engine.py.

10.160.2.14 def rpki.rpki_engine.ca_obj.parent (self)

Fetch parent object to which this CA object links.

Definition at line 317 of file rpki_engine.py.

10.160.2.15 def rpki.rpki_engine.ca_obj.rekey (self, cb, eb)

Initiate a rekey operation for this ca. Generate a new keypair. Request cert from parent using new keypair. Mark result as our active ca_detail. Reissue all child certs issued by this ca using the new ca_detail.

Definition at line 512 of file rpki_engine.py.

10.160.2.16 def rpki.rpki_engine.ca_obj.revoke (self, cb, eb)

Revoke deprecated ca_detail objects associated with this ca.

Definition at line 537 of file rpki_engine.py.

10.160.3 Member Data Documentation

10.161.1 Detailed Description

Certificate that has been issued to a child.

Definition at line 917 of file rpki_engine.py.

10.161.2 Member Function Documentation

10.161.2.1 def rpki.rpki_engine.child_cert_obj.__init__ (self, gctx = None, child id = None, ca detail id = None, cert = None)

Initialize a child_cert_obj.

Definition at line 931 of file rpki_engine.py.

10.161.2.2 def rpki.rpki_engine.child_cert_obj.ca_detail (self)

Fetch ca_detail object to which this child_cert object links.

Definition at line 948 of file rpki_engine.py.

10.161.2.3 def rpki.rpki_engine.child_cert_obj.child (self)

Fetch child object to which this child_cert object links.

Definition at line 944 of file rpki_engine.py.

10.161.2.4 def rpki.rpki_engine.child_cert_obj.fetch (cls, gctx = None, child = None, ca_detail = None, ski = None, unique = False)

Fetch all child_cert objects matching a particular set of parameters. This is a wrapper to consolidate various queries that would otherwise be inline SQL WHERE expressions. In most cases code calls this indirectly, through methods in other classes.

Definition at line 1028 of file rpki_engine.py.

10.161.2.5 def rpki.rpki_engine.child_cert_obj.published_callback (self, pdu)

Publication callback: check result and mark published.

Definition at line 1060 of file rpki_engine.py.

10.161.2.6 def rpki.rpki_engine.child_cert_obj.reissue (self, ca_detail, publisher, resources = None, sia = None)

Reissue an existing child cert, reusing the public key. If the child cert we would generate is identical to the one we already have, we just return the one we already have. If we have to revoke the old child cert when generating the new one, we have to generate a new child_cert_obj, so calling code that needs the updated child_cert_obj must use the return value from this method.

Definition at line 972 of file rpki_engine.py.

10.161.2.7 def rpki.rpki_engine.child_cert_obj.revoke (self, publisher)

Revoke a child cert.

Definition at line 960 of file rpki_engine.py.

10.161.2.8 def rpki.rpki_engine.child_cert_obj.uri (self, ca)

Return the publication URI for this child_cert.

Definition at line 956 of file rpki_engine.py.

10.161.2.9 def rpki.rpki_engine.child_cert_obj.uri_tail (self)

Return the tail (filename) portion of the URI for this child_cert.

Definition at line 952 of file rpki_engine.py.

10.162.1 Detailed Description

Utility to simplify publication from within rpkid.

General idea here is to accumulate a collection of objects to be published, in one or more repositories, each potentially with its own completion callback. Eventually we want to publish everything we've accumulated, at which point we need to iterate over the collection and do repository.call_pubd() for each repository.

Definition at line 1346 of file rpki_engine.py.

10.164.1 Detailed Description

Route Origin Authorization.

Definition at line 1108 of file rpki_engine.py.

10.164.2 Member Function Documentation

10.164.2.1 def rpki.rpki_engine.roa_obj.__init__ (self, gctx = None, $self_id$ = None, asn = None, ipv4 = None, ipv6 = None)

Definition at line 1174 of file rpki_engine.py.

10.164.2.2 def rpki.rpki_engine.roa_obj.ca_detail (self)

Fetch ca_detail object to which this roa_obj links.

Definition at line 1134 of file rpki_engine.py.

10.164.2.3 def rpki.rpki_engine.roa_obj.generate (self, publisher)

Generate a ROA.

At present this does not support ROAs with multiple signatures (neither does the current CMS code).

At present we have no way of performing a direct lookup from a desired set of resources to a covering certificate, so we have to search. This could be quite slow if we have a lot of active ca_detail objects. Punt on the issue for now, revisit if profiling shows this as a hotspot.

Once we have the right covering certificate, we generate the ROA payload, generate a new EE certificate, use the EE certificate to sign the ROA payload, publish the result, then throw away the private key for the EE cert, all per the ROA specification. This implies that generating a lot of ROAs will tend to thrash /dev/random, but there is not much we can do about that.

Definition at line 1217 of file rpki_engine.py.

10.164.2.4 def rpki.rpki_engine.roa_obj.published_callback (self, pdu)

Check publication result.

Definition at line 1283 of file rpki_engine.py.

10.164.2.5 def rpki.rpki_engine.roa_obj.regenerate (self, publisher)

Reissue ROA associated with this roa_obj.

Definition at line 1323 of file rpki_engine.py.

10.164.2.6 def rpki.rpki_engine.roa_obj.revoke (self, publisher, regenerate = False, allow_failure = False)

Withdraw ROA associated with this roa_obj.

In order to preserve make-before-break properties without

duplicating code, this method also handles generating a replacement $\ensuremath{\mathsf{ROA}}$ when requested.

If allow_failure is set, failing to withdraw the ROA will not be considered an error. $\,$

Definition at line 1291 of file rpki_engine.py.

10.164.2.7 def rpki.rpki_engine.roa_obj.self (self)

Fetch self object to which this roa_obj links.

Definition at line 1128 of file rpki_engine.py.

10.164.2.8 def rpki.rpki_engine.roa_obj.sql_delete_hook (self)

Extra SQL delete actions for roa_obj -- handle prefix lists.

Reimplemented from rpki.sql.sql_persistent.

Definition at line 1168 of file rpki_engine.py.

10.164.2.9 def rpki.rpki_engine.roa_obj.sql_fetch_hook (self)

Extra SQL fetch actions for roa_obj -- handle prefix lists.

Reimplemented from rpki.sql.sql_persistent.

Definition at line 1140 of file rpki_engine.py.

10.164.2.10 def rpki.rpki_engine.roa_obj.sql_insert_hook (self)

Extra SQL insert actions for roa_obj -- handle prefix lists.

Reimplemented from rpki.sql.sql_persistent.

Definition at line 1154 of file rpki_engine.py.

10.164.2.11 def rpki.rpki_engine.roa_obj.update (self, publisher)

Bring this roa_obj's ROA up to date if necesssary.

Definition at line 1187 of file rpki_engine.py.

10.164.2.12 def rpki.rpki_engine.roa_obj.uri (self, key = None)

Return the publication URI for this roa_obj's ROA.

Definition at line 1332 of file rpki_engine.py.

10.164.2.13 def rpki.rpki_engine.roa_obj.uri_tail (self, key = None)

Return the tail (filename portion) of the publication URI for this $roa_obj's\ ROA$.

Definition at line 1338 of file rpki_engine.py.

10.167.1 Detailed Description

Mixin for persistent class that needs to be stored in SQL.

Definition at line 140 of file sql.py.

10.167.2 Member Function Documentation

10.167.2.1 def rpki.sql.sql_persistent.sql_decode (self, vals)

Initialize an object with values returned by self.sql_fetch(). This is a default version that assumes a one-to-one mapping between column names in SQL and attribute names in Python. If you need something fancier, override this.

Reimplemented in rpki.rpki_engine.ca_detail_obj.

Definition at line 310 of file sql.py.

10.167.2.2 def rpki.sql_sql_persistent.sql_delete (self)

Delete this object from SQL.

Definition at line 281 of file sql.py.

10.167.2.3 def rpki.sql.sql_persistent.sql_delete_hook (self)

Customization hook.

Reimplemented in rpki.rpki_engine.roa_obj.

Definition at line 336 of file sql.py.

10.167.2.4 def rpki.sql.sql_persistent.sql_encode (self)

Convert object attributes into a dict for use with canned SQL queries. This is a default version that assumes a one-to-one mapping between column names in SQL and attribute names in Python. If you need something fancier, override this.

Definition at line 297 of file sql.py.

10.167.2.5 def rpki.sql_sql_persistent.sql_fetch (cls, gctx, id)

Fetch one object from SQL, based on its primary key.

Since in this one case we know that the primary index is also the cache key, we check for a cache hit directly in the hope of bypassing the SQL lookup entirely.

This method is usually called via a one-line class-specific wrapper. As a convenience, we also accept an id of None, and just return None in this case.

Definition at line 161 of file sql.py.

10.167.2.6 def rpki.sql.sql_persistent.sql_fetch_all (cls, gctx)

Fetch all objects of this type from SQL.

Definition at line 199 of file sql.py.

10.167.2.7 def rpki.sql_persistent.sql_fetch_hook (self)

Customization hook.

Reimplemented in rpki.rpki_engine.roa_obj.

Definition at line 323 of file sql.py.

10.167.2.8 def rpki.sql.sql_persistent.sql_fetch_where (cls, gctx, where, args = None, also_from = None)

Fetch objects of this type matching an arbitrary SQL WHERE expression.

Definition at line 204 of file sql.py.

10.167.2.9 def rpki.sql.sql_persistent.sql_fetch_where1 (cls, gctx, where, args = None, also_from = None)

Fetch one object from SQL, based on an arbitrary SQL WHERE expression.

Definition at line 184 of file sql.py.

10.167.2.10 def rpki.sql.sql_persistent.sql_init (cls, gctx, row, key)

Initialize one Python object from the result of a SQL query.

Definition at line 231 of file sql.py.

10.167.2.11 def rpki.sql.sql_persistent.sql_insert_hook (self)

Customization hook.

Reimplemented in rpki.rpki_engine.roa_obj.

Definition at line 327 of file sql.py.

10.167.2.12 def rpki.sql_persistent.sql_is_dirty (self)

Query whether this object needs to be written back to SQL.

Definition at line 251 of file sql.py.

10.167.2.13 def rpki.sql.sql_persistent.sql_mark_clean (self)

Mark this object as not needing to be written back to SQL.

Definition at line 247 of file sql.py.

10.167.2.14 def rpki.sql.sql_persistent.sql_mark_deleted (self)

Mark this object as needing to be deleted in SQL.

Definition at line 255 of file sql.py.

10.167.2.15 def rpki.sql_persistent.sql_mark_dirty (self)

Mark this object as needing to be written back to SQL.

Definition at line 243 of file sql.py.

10.167.2.16 def rpki.sql.sql_persistent.sql_store (self)

Store this object to SQL.

Definition at line 259 of file sql.py.

10.167.2.17 def rpki.sql.sql_persistent.sql_update_hook (self)

Customization hook.

Definition at line 331 of file sql.py.

10.167.3 Member Data Documentation

10.167.3.1 rpki.sql.sql_persistent.gctx

Reimplemented in rpki.rpki_engine.ca_obj, rpki.rpki_engine.ca_detail_obj, rpki.rpki_engine.child_cert_obj, rpki.rpki_engine.revoked_cert_obj, and rpki.rpki_engine.roa_obj.

Definition at line 236 of file sql.py.

10.167.3.2 rpki::sql.sql_persistent::sql_debug = False [static]

Enable logging of SQL actions.

Definition at line 158 of file sql.py.

10.167.3.3 rpki::sql.sql_persistent::sql_deleted = False [static]

Whether our cached copy of this object has been deleted.

Definition at line 153 of file sql.py.

10.167.3.4 rpki::sql.sql_persistent::sql_in_db = False [static]

Whether this object is already in SQL or not.

Definition at line 148 of file sql.py.

Static Public Attributes

• tuple PKIX_threshhold = pydatetime.datetime(2050, 1, 1)

Threshold specified in RFC 3280 for switchover from UTCTime to GeneralizedTime.

10.169.1 Detailed Description

 $\ensuremath{\mathsf{RPKI}}$ extensions to standard datetime.datetime class. All work here is in UTC, so we use naive datetime objects.

Definition at line 54 of file sundial.py.

10.169.2 Member Function Documentation

10.169.2.1 def rpki.sundial.datetime.__add__ (x, y)

Definition at line 163 of file sundial.py.

10.169.2.2 def rpki.sundial.datetime.__radd__ (x, y)

Definition at line 164 of file sundial.py.

10.169.2.3 def rpki.sundial.datetime.__rsub__ (x, y)

Definition at line 165 of file sundial.py.

10.169.2.4 def rpki.sundial.datetime.__str__ (self)

Definition at line 124 of file sundial.py.

10.169.2.5 def rpki.sundial.datetime.__sub__ (x, y)

Definition at line 166 of file sundial.py.

10.169.2.6 def rpki.sundial.datetime.earlier (self, other)

Return the earlier of two timestamps.

Definition at line 159 of file sundial.py.

10.169.2.7 def rpki.sundial.datetime.from_sql (cls, x)

Convert from SQL storage format.

Definition at line 136 of file sundial.py.

10.169.2.8 def rpki.sundial.datetime.fromASN1tuple (cls, x)

Convert from ASN.1 tuple representation.

Definition at line 86 of file sundial.py.

10.169.2.9 def rpki.sundial.datetime.fromdatetime (cls, x)

Convert a datetime.datetime object into this subclass. This is whacky due to the weird constructors for datetime.

Definition at line 128 of file sundial.py.

10.169.2.10 def rpki.sundial.datetime.fromGeneralizedTime (cls, x)

Convert from ASN.1 GeneralizedTime.

Definition at line 77 of file sundial.py.

10.169.2.11 def rpki.sundial.datetime.fromUTCTime (cls, x)

Convert from ASN.1 UTCTime.

Definition at line 68 of file sundial.py.

10.169.2.12 def rpki.sundial.datetime.fromXMLtime (cls, x)

Convert from XML time representation.

Definition at line 111 of file sundial.py.

10.169.2.13 def rpki.sundial.datetime.later (self, other)

Return the later of two timestamps.

Definition at line 155 of file sundial.py.

10.169.2.14 def rpki.sundial.datetime.to_sql (self)

Convert to SQL storage format.

There's something whacky going on in the MySQLdb module, it throws range errors when storing a derived type into a DATETIME column. Investigate some day, but for now brute force this by copying the relevant fields into a datetime.datetime for MySQLdb's consumption.

Definition at line 140 of file sundial.py.

10.169.2.15 def rpki.sundial.datetime.toASN1tuple (self)

Convert to ASN.1 tuple representation.

Definition at line 101 of file sundial.py.

10.169.2.16 def rpki.sundial.datetime.toGeneralizedTime (self)

Convert to ASN.1 GeneralizedTime.

Definition at line 81 of file sundial.py.

10.169.2.17 def rpki.sundial.datetime.totimestamp (self)

Convert to seconds from epoch (like time.time()). Conversion method is a bit silly, but avoids time module timezone whackiness.

Definition at line 60 of file sundial.py.

10.169.2.18 def rpki.sundial.datetime.toUTCTime (self)

Convert to ASN.1 UTCTime.

Definition at line 72 of file sundial.py.

10.169.2.19 def rpki.sundial.datetime.toXMLtime (self)

```
Convert to XML time representation.
```

Definition at line 120 of file sundial.py.

10.169.3 Member Data Documentation

10.169.3.1 rpki::sundial.datetime::PKIX_threshhold = pydatetime.datetime(2050, 1, 1) [static]

Threshold specified in RFC 3280 for switchover from UTCTime to GeneralizedTime.

Definition at line 99 of file sundial.py.

- def convert_to_seconds
- · def fromtimedelta
- def parse

Static Public Attributes

• tuple regexp

Hideously ugly regular expression to parse the complex text form.

10.170.1 Detailed Description

Timedelta with text parsing. This accepts two input formats:

- A simple integer, indicating a number of seconds.
- A string of the form "wD xH yM zS" where w, x, y, and z are integers and D, H, M, and S indicate days, hours, minutes, and seconds. All of the fields are optional, but at least one must be specified. Eg, "3D4H" means "three days plus four hours".

Definition at line 168 of file sundial.py.

10.170.2 Member Function Documentation

10.170.2.1 def rpki.sundial.timedelta.__abs__(x)

Definition at line 218 of file sundial.py.

Definition at line 228 of file sundial.py.

10.170.2.12 def rpki.sundial.timedelta.__rsub__(x, y)

Definition at line 229 of file sundial.py.

10.170.2.13 def rpki.sundial.timedelta.__sub__ (x, y)

Definition at line 230 of file sundial.py.

10.170.2.14 def rpki.sundial.timedelta.convert_to_seconds (self)

Convert a timedelta interval to seconds.

Definition at line 209 of file sundial.py.

10.170.2.15 def rpki.sundial.timedelta.fromtimedelta (cls, x)

Convert a datetime.timedelta object into this subclass.

Definition at line 214 of file sundial.py.

10.170.2.16 def rpki.sundial.timedelta.parse (cls, arg)

Parse text into a timedelta object.

Definition at line 194 of file sundial.py.

10.170.3 Member Data Documentation

10.170.3.1 rpki::sundial.timedelta::regexp [static]

Initial value:

```
"(?:(?P<hours>\\d+)H)?",
"(?:(?P<minutes>\\d+)M)?",
"(?:(?P<seconds>\\d+)S)?",
"$")),
re.I)
```

Hideously ugly regular expression to parse the complex text form. Tags are intended for use with re.MatchObject.groupdict() and map directly to the keywords expected by the timedelta constructor.

Definition at line 185 of file sundial.py.

The documentation for this class was generated from the following file:

• sundial.py (2785)

10.171 rpki.up_down.base_elt Class Reference

Inherits object.

Inherited by rpki.up_down.certificate_elt, rpki.up_down.class_elt, rpki.up_down.class_response_syntax, rpki.up_down.error_response_pdu, rpki.up_down.issue_pdu, rpki.up_down.message_pdu, and rpki.up_down.revoke_syntax.

Public Member Functions

- def check_response
- def endElement
- def make_b64elt
- def make_elt
- def serve_pdu
- def startElement

10.171.1 Detailed Description

```
Generic PDU object.

Virtual class, just provides some default methods.
```

Definition at line 43 of file up_down.py.

10.171.2 Member Function Documentation

10.171.2.1 def rpki.up_down.base_elt.check_response (self)

Placeholder for response checking.

Reimplemented in rpki.up_down.issue_response_pdu, and rpki.up_down.error_response_pdu.

Definition at line 91 of file up_down.py.

10.171.2.2 def rpki.up_down.base_elt.endElement (self, stack, name, text)

```
Ignore endElement() if there's no specific handler.
```

If we don't need to do anything else, just pop the stack.

Reimplemented in rpki.up_down.certificate_elt, rpki.up_down.class_elt, rpki.up_down.issue_pdu, and rpki.up_down.error_response_pdu.

Definition at line 59 of file up_down.py.

10.171.2.3 def rpki.up_down.base_elt.make_b64elt (self, elt, name, value = None)

Construct a sub-element with Base64 text content.

Definition at line 78 of file up_down.py.

10.171.2.4 def rpki.up_down.base_elt.make_elt (self, name, attrs)

Construct a element, copying over a set of attributes.

Definition at line 67 of file up_down.py.

10.171.2.5 def rpki.up_down.base_elt.serve_pdu (self, q_msg, r_msg, child, callback, errback)

Default PDU handler to catch unexpected types.

Reimplemented in rpki.up_down.list_pdu, rpki.up_down.issue_pdu, rpki.up_down.revoke_pdu, rootd.list_pdu, rootd.issue_pdu, and rootd.revoke_pdu.

Definition at line 87 of file up_down.py.

10.171.2.6 def rpki.up_down.base_elt.startElement (self, stack, name, attrs)

```
Ignore startElement() if there's no specific handler.

Some elements have no attributes and we only care about their text content.
```

Reimplemented in rpki.up_down.certificate_elt, rpki.up_down.class_elt, rpki.up_down.class_response_syntax, rpki.up_down.issue_pdu, rpki.up_down.revoke_syntax, and rpki.up_down.message_pdu.

Definition at line 50 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.178 rpki.up_down.issue_response_pdu Class Reference

Inherits rpki::up_down::class_response_syntax.

Public Member Functions

• def check_response

10.178.1 Detailed Description

```
Up-Down protocol "issue_response" PDU.
```

Definition at line 429 of file up_down.py.

10.178.2 Member Function Documentation

10.178.2.1 def rpki.up_down.issue_response_pdu.check_response (self)

Check whether this looks like a reasonable issue_response PDU. XML schema should be tighter for this response.

Reimplemented from rpki.up down.base elt.

Definition at line 434 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.179 rpki.up_down.list_pdu Class Reference

Inherits rpki::up_down::base_elt.

Inherited by rootd.list_pdu.

Public Member Functions

- def query
- def serve pdu
- def toXML

10.179.1 Detailed Description

```
Up-Down protocol "list" PDU.
```

Definition at line 231 of file up_down.py.

10.179.2 Member Function Documentation

10.179.2.1 def rpki.up_down.list_pdu.query (cls, parent, cb, eb)

```
Send a "list" query to parent.
```

Definition at line 273 of file up_down.py.

10.179.2.2 def rpki.up_down.list_pdu.serve_pdu (self, q_msg, r_msg, child, callback, errback)

```
Serve one "list" PDU.
```

Reimplemented from rpki.up_down.base_elt.

Reimplemented in rootd.list_pdu.

Definition at line 240 of file up_down.py.

10.179.2.3 def rpki.up_down.list_pdu.toXML (self)

```
Generate (empty) payload of "list" PDU.
```

Definition at line 236 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.180 rpki.up_down.list_response_pdu Class Reference

Inherits rpki::up_down::class_response_syntax.

10.180.1 Detailed Description

```
Up-Down protocol "list_response" PDU.
```

Definition at line 310 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.181 rpki.up_down.message_pdu Class Reference

 $Inherits\ rpki::up_down::base_elt.$

Inherited by rootd.message_pdu.

Public Member Functions

- def str
- def log_query
- def make_query
- def serve_error
- def serve_top_level
- def startElement
- def toXML

Public Attributes

- payload
- · recipient
- sender
- type
- version

Static Public Attributes

- dictionary name2type
- tuple type2name = dict((v, k) for k, v in name2type.items())
- int version = 1

10.181.1 Detailed Description

Up-Down protocol message wrapper PDU.

Definition at line 568 of file up_down.py.

10.181.2 Member Function Documentation

10.181.2.1 def rpki.up_down.message_pdu.__str__ (self)

Convert a message PDU to a string.

Definition at line 610 of file up_down.py.

10.181.2.2 def rpki.up_down.message_pdu.log_query (self, child)

Log query we're handling. Separate method so rootd can override.

Reimplemented in rootd.message_pdu.

Definition at line 639 of file up_down.py.

10.181.2.3 def rpki.up_down.message_pdu.make_query (cls, payload, sender, recipient)

Construct one message PDU.

Definition at line 657 of file up_down.py.

10.181.2.4 def rpki.up_down.message_pdu.serve_error (self, exception)

Generate an error_response message PDU.

Definition at line 645 of file up_down.py.

10.181.2.5 def rpki.up_down.message_pdu.serve_top_level (*self*, *child*, *callback*)

```
Serve one message request PDU.
```

Definition at line 614 of file up_down.py.

10.181.2.6 def rpki.up_down.message_pdu.startElement (self, stack, name, attrs)

```
Handle message PDU.
```

Payload of the <message/> element varies depending on the "type" attribute, so after some basic checks we have to instantiate the right class object to handle whatever kind of PDU this is.

Reimplemented from rpki.up_down.base_elt.

Definition at line 594 of file up_down.py.

10.181.2.7 def rpki.up_down.message_pdu.toXML (self)

```
Generate payload of message PDU.
```

Definition at line 586 of file up_down.py.

10.181.3 Member Data Documentation

10.181.3.1 dictionary rpki.up_down.message_pdu.name2type [static]

Initial value:

```
"list" : list_pdu,
"list_response" : list_response_pdu,
"issue" : issue_pdu,
"issue_response" : issue_response_pdu,
"revoke" : revoke_pdu,
"revoke_response" : revoke_response_pdu,
"error_response" : error_response_pdu }
```

Reimplemented in rootd.message_pdu.

Definition at line 575 of file up_down.py.

10.181.3.2 rpki.up_down.message_pdu.payload

Definition at line 607 of file up_down.py.

10.181.3.3 rpki.up_down.message_pdu.recipient

Definition at line 605 of file up_down.py.

10.181.3.4 rpki.up_down.message_pdu.sender

Definition at line 604 of file up_down.py.

10.181.3.5 rpki.up_down.message_pdu.type

Definition at line 606 of file up_down.py.

10.181.3.6 tuple rpki.up_down.message_pdu.type2name = dict((v, k) for k, v in name2type.items()) [static]

Reimplemented in rootd.message_pdu.

Definition at line 584 of file up_down.py.

10.181.3.7 rpki.up_down.message_pdu.version

Definition at line 603 of file up_down.py.

10.181.3.8 intrpki.up_down.message_pdu.version = 1 [static]

Definition at line 573 of file up_down.py.

The documentation for this class was generated from the following file:

10.182 rpki.up_down.multi_uri Class Reference

Inherits list.

Public Member Functions

- def __init__
- def <u>__str__</u>
- def rsync

10.182.1 Detailed Description

Container for a set of URIs.

Definition at line 95 of file up_down.py.

10.182.2 Member Function Documentation

10.182.2.1 def rpki.up_down.multi_uri.__init__ (self, ini)

Initialize a set of URIs, which includes basic some syntax checking.

Definition at line 100 of file up_down.py.

10.182.2.2 def rpki.up_down.multi_uri.__str__ (self)

Convert a multi_uri back to a string representation.

Definition at line 115 of file up_down.py.

10.182.2.3 def rpki.up_down.multi_uri.rsync (self)

Find first rsync://... URI in self.

Definition at line 119 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.183 rpki.up_down.revoke_pdu Class Reference

```
Inherits\ rpki::up\_down::revoke\_syntax.
```

Inherited by rootd.revoke_pdu.

Public Member Functions

- def get_SKI
- def query
- def serve_pdu

Public Attributes

- class_name
- ski

10.183.1 Detailed Description

```
Up-Down protocol "revoke" PDU.
```

Definition at line 456 of file up_down.py.

10.183.2 Member Function Documentation

10.183.2.1 def rpki.up_down.revoke_pdu.get_SKI (self)

```
Convert g(SKI) encoding from PDU back to raw SKI.
```

Definition at line 461 of file up_down.py.

10.183.2.2 def rpki.up_down.revoke_pdu.query (cls, ca, gski, cb, eb)

Send a "revoke" request for certificate(s) named by gski to parent associated with ca.

Definition at line 485 of file up_down.py.

10.183.2.3 def rpki.up_down.revoke_pdu.serve_pdu (self, q_msg, r_msg, child, cb, eb)

Serve one revoke request PDU.

Reimplemented from rpki.up_down.base_elt.

Reimplemented in rootd.revoke_pdu.

Definition at line 465 of file up_down.py.

10.183.3 Member Data Documentation

10.183.3.1 rpki.up down.revoke pdu.class name

Reimplemented from rpki.up_down.revoke_syntax.

Definition at line 491 of file up_down.py.

10.183.3.2 rpki.up_down.revoke_pdu.ski

Reimplemented from rpki.up_down.revoke_syntax.

Definition at line 492 of file up_down.py.

The documentation for this class was generated from the following file:

10.186 rpki.up_down.sax_handler Class Reference

Inherits rpki::xml_utils::sax_handler.

Inherited by rootd.sax_handler.

Static Public Attributes

- string name = "message"
- pdu = message_pdu
- string version = "1"

10.186.1 Detailed Description

```
SAX handler for Up-Down protocol.
```

Definition at line 673 of file up_down.py.

10.186.2 Member Data Documentation

10.186.2.1 string rpki.up_down.sax_handler.name = "message" [static]

Definition at line 679 of file up_down.py.

10.186.2.2 rpki.up_down.sax_handler.pdu = message_pdu [static]

Reimplemented in rootd.sax_handler.

Definition at line 678 of file up_down.py.

10.186.2.3 string rpki.up_down.sax_handler.version = "1" [static]

Definition at line 680 of file up_down.py.

The documentation for this class was generated from the following file:

• up_down.py (2876)

10.187 rpki.x509.CMS_object Class Reference

Inherits rpki::x509::DER_object.

Inherited by rpki.x509.DER_CMS_object, and rpki.x509.XML_CMS_object.

Public Member Functions

- def extract
- def get_content
- def get_DER
- def get_POW
- def set_content
- def sign
- def verify

Public Attributes

- · content
- DER

DER value of this object.

• POW

Static Public Attributes

• debug_cms_certs = False

Set this to True to log a lot of chatter about CMS certificates.

• dump_on_verify_failure = True

Set this to True to get dumpasn1 dumps of ASN.1 on CMS verify failures.

- tuple econtent oid = POWify OID("id-data")
- tuple formats = ("DER", "POW")

Formats supported in this object.

• tuple other_clear = ("content",)

Other attributes that self.clear() should whack.

• tuple pem_converter = PEM_converter("CMS")

PEM converter for this object.

• print_on_der_error = True

Set this to True to log alleged DER when we have trouble parsing it, in case it's really a Perl backtrace or something.

• require_crls = False

Set this to False to make CMS CRLs optional in the cases where we would otherwise require them.

10.187.1 Detailed Description

Class to hold a CMS-wrapped object.

CMS-wrapped objects are a little different from the other DER_object types because the signed object is CMS wrapping inner content that's also ASN.1, and due to our current minimal support for CMS we can't just handle this as a pretty composite object. So, for now anyway, a CMS_object is the outer CMS wrapped object so that the usual DER and PEM operations do the obvious things, and the inner content is handle via separate methods.

Definition at line 701 of file x509.py.

10.187.2 Member Function Documentation

10.187.2.1 def rpki.x509.CMS_object.extract (self)

Extract and store inner content from CMS wrapper without verifying the ${\it CMS}$.

DANGER WILL ROBINSON!!!

Do not use this method on unvalidated data. Use the verify() method instead.

If you don't understand this warning, don't use this method.

Definition at line 851 of file x509.py.

10.187.2.2 def rpki.x509.CMS_object.get_content (self)

Get the inner content of this CMS_object.

Definition at line 763 of file x509.py.

10.187.2.3 def rpki.x509.CMS_object.get_DER (self)

Get the DER value of this CMS_object.

Reimplemented from rpki.x509.DER_object.

Definition at line 742 of file x509.py.

10.187.2.4 def rpki.x509.CMS_object.get_POW (self)

Get the POW value of this CMS_object.

Definition at line 754 of file x509.py.

10.187.2.5 def rpki.x509.CMS_object.set_content (self, content)

Set the (inner) content of this CMS_object, clearing the wrapper.

Definition at line 770 of file x509.py.

10.187.2.6 def rpki.x509.CMS_object.sign (self, keypair, certs, crls = None, no_certs = False)

Sign and wrap inner content.

Definition at line 879 of file x509.py.

10.187.2.7 def rpki.x509.CMS_object.verify (self, ta)

Verify CMS wrapper and store inner content.

Definition at line 777 of file x509.py.

10.187.3 Member Data Documentation

10.187.3.1 rpki.x509.CMS_object.content

Reimplemented in rpki.x509.DER_CMS_object, and rpki.x509.XML_CMS_object. Definition at line 775 of file x509.py.

10.187.3.2 rpki::x509.CMS_object::debug_cms_certs = False [static]

Set this to True to log a lot of chatter about CMS certificates.

Definition at line 727 of file x509.py.

10.187.3.3 rpki.x509.CMS_object.DER

DER value of this object.

Reimplemented from rpki.x509.DER_object.

Definition at line 750 of file x509.py.

10.187.3.4 rpki::x509.CMS_object::dump_on_verify_failure = True [static]

Set this to True to get dumpasn1 dumps of ASN.1 on CMS verify failures.

Definition at line 722 of file x509.py.

10.187.3.5 tuple rpki.x509.CMS_object.econtent_oid = POWify_OID("id-data") [static]

Reimplemented in rpki.x509.SignedManifest, rpki.x509.ROA, and rpki.x509.XML_-CMS_object.

Definition at line 716 of file x509.py.

10.187.3.6 tuple rpki.x509.CMS_object.formats = ("DER", "POW") [static]

Formats supported in this object.

Reimplemented from rpki.x509.DER_object.

Definition at line 714 of file x509.py.

10.187.3.7 tuple rpki.x509.CMS_object.other_clear = ("content",) [static]

Other attributes that self.clear() should whack.

Reimplemented from rpki.x509.DER_object.

Definition at line 715 of file x509.py.

10.187.3.8 tuple rpki.x509.CMS_object.pem_converter = PEM_converter("CMS") [static]

PEM converter for this object.

Reimplemented from rpki.x509.DER_object.

Reimplemented in rpki.x509.SignedManifest, and rpki.x509.ROA.

Definition at line 717 of file x509.py.

10.187.3.9 rpki.x509.CMS_object.POW

Definition at line 760 of file x509.py.

10.187.3.10 rpki::x509.CMS_object::print_on_der_error = True [static]

Set this to True to log alleged DER when we have trouble parsing it, in case it's really a Perl backtrace or something.

Definition at line 740 of file x509.py.

10.187.3.11 rpki::x509.CMS_object::require_crls = False [static]

Set this to False to make CMS CRLs optional in the cases where we would otherwise require them. Some day this option should go away and CRLs should be uncondtionally mandatory in such cases.

Definition at line 734 of file x509.py.

The documentation for this class was generated from the following file:

• x509.py (2784)

10.188 rpki.x509.CRL Class Reference

Inherits rpki::x509::DER_object.

Public Member Functions

- def generate
- def get_DER
- def get_POW
- def get_POWpkix

Calculate g(AKI) for this object. Only work for subclasses that implement $\mbox{get_AKI()}$.

Definition at line 235 of file x509.py.

10.190.2.8 def rpki.x509.DER_object.get_3779resources (self)

Get RFC 3779 resources as rpki.resource_set objects. Only works for subclasses that support getExtensions().

Definition at line 286 of file x509.py.

10.190.2.9 def rpki.x509.DER_object.get_AIA (self)

Get the SIA extension from this object. Only works for subclasses that support $getExtension\left(\right)$.

Definition at line 264 of file x509.py.

10.190.2.10 def rpki.x509.DER_object.get_AKI (self)

Get the AKI extension from this object. Only works for subclasses that support getExtension().

Definition at line 242 of file x509.py.

10.190.2.11 def rpki.x509.DER_object.get_Base64 (self)

Get the Base64 encoding of the DER value of this object.

Definition at line 191 of file x509.py.

10.190.2.12 def rpki.x509.DER_object.get_basicConstraints (self)

Get the basicConstraints extension from this object. Only works for subclasses that support getExtension().

Definition at line 271 of file x509.py.

10.190.2.13 def rpki.x509.DER_object.get_DER (self)

Get the DER value of this object.

Subclasses will almost certainly override this method.

Reimplemented in rpki.x509.X509, rpki.x509.PKCS10, rpki.x509.RSA, rpki.x509.RSApublic, rpki.x509.CMS_object, and rpki.x509.CRL.

Definition at line 180 of file x509.py.

10.190.2.14 def rpki.x509.DER_object.get_PEM (self)

Get the PEM representation of this object.

Definition at line 195 of file x509.py.

10.190.2.15 def rpki.x509.DER_object.get_SIA (self)

Get the SIA extension from this object. Only works for subclasses that support $getExtension\left(\right)$.

Definition at line 257 of file x509.py.

10.190.2.16 def rpki.x509.DER_object.get_SKI (self)

Get the SKI extension from this object. Only works for subclasses that support getExtension().

Reimplemented in rpki.x509.RSA, and rpki.x509.RSApublic.

Definition at line 250 of file x509.py.

10.190.2.17 def rpki.x509.DER_object.gSKI (self)

Calculate g(SKI) for this object. Only work for subclasses that implement $get_SKI()$.

Definition at line 220 of file x509.py.

10.190.2.18 def rpki.x509.DER_object.hAKI (self)

Return hexadecimal string representation of AKI for this object. Only work for subclasses that implement get_AKI().

Definition at line 227 of file x509.py.

10.190.2.19 def rpki.x509.DER_object.hSKI (self)

Return hexadecimal string representation of SKI for this object. Only work for subclasses that implement $get_SKI()$.

Definition at line 212 of file x509.py.

10.190.2.20 def rpki.x509.DER_object.is_CA (self)

Return True if and only if object has the basicConstraints extension and its cA value is true.

Definition at line 278 of file x509.py.

10.190.2.21 def rpki.x509.DER object.set (self, kw)

Set this object by setting one of its known formats.

This method only allows one to set one format at a time. Subsequent calls will clear the object first. The point of all this is to let the object's internal converters handle mustering the object into whatever format you need at the moment.

Definition at line 145 of file x509.py.

10.190.2.22 def rpki.x509.DER_object.to_sql (self)

Convert to SQL storage format.

Definition at line 303 of file x509.py.

10.190.3 Member Data Documentation

10.190.3.1 rpki::x509.DER_object::DER

DER value of this object.

Reimplemented in rpki.x509.X509, rpki.x509.PKCS10, rpki.x509.RSA, rpki.x509.RSApublic, rpki.x509.CMS_object, and rpki.x509.CRL.

Definition at line 163 of file x509.py.

10.190.3.2 tuple rpki.x509.DER_object.formats = ("DER",) [static]

Formats supported in this object.

Reimplemented in rpki.x509.X509, rpki.x509.PKCS10, rpki.x509.RSA, rpki.x509.RSApublic, rpki.x509.CMS_object, and rpki.x509.CRL.

Definition at line 110 of file x509.py.

10.190.3.3 tuple rpki.x509.DER object.other clear = () [static]

Other attributes that self.clear() should whack.

Reimplemented in rpki.x509.CMS_object.

Definition at line 116 of file x509.py.

10.190.3.4 rpki.x509.DER_object.pem_converter = None [static]

PEM converter for this object.

Reimplemented in rpki.x509.X509, rpki.x509.PKCS10, rpki.x509.RSA, rpki.x509.RSApublic, rpki.x509.CMS_object, rpki.x509.SignedManifest, rpki.x509.ROA, and rpki.x509.CRL.

Definition at line 113 of file x509.py.

 Formats supported in this object.
- tuple pem_converter = PEM_converter("CERTIFICATE REQUEST")

 PEM converter for this object.

10.192.1 Detailed Description

Class to hold a PKCS #10 request.

Definition at line 500 of file x509.py.

10.192.2 Member Function Documentation

10.192.2.1 def rpki.x509.PKCS10.check_valid_rpki (self)

Check this certification request to see whether it's a valid request for an RPKI certificate. This is broken out of the up-down protocol code because it's somewhat involved and the up-down code doesn't need to know the details.

Throws an exception if the request isn't valid, so if this method returns at all, the request is ok.

Definition at line 535 of file x509.py.

10.192.2.2 def rpki.x509.PKCS10.create (cls, keypair, exts = None)

Create a new request for a given keypair, including given extensions.

Definition at line 595 of file x509.py.

10.192.2.3 def rpki.x509.PKCS10.create_ca (cls, keypair, sia = None)

Create a new request for a given keypair, including given SIA value.

Definition at line 582 of file x509.py.

10.192.2.4 def rpki.x509.PKCS10.get_DER (self)

Get the DER value of this certification request.

Reimplemented from rpki.x509.DER_object.

Definition at line 508 of file x509.py.

10.192.2.5 def rpki.x509.PKCS10.get_POWpkix (self)

Get the POW.pkix value of this certification request.

Definition at line 520 of file x509.py.

10.192.2.6 def rpki.x509.PKCS10.getPublicKey (self)

Extract the public key from this certification request.

Definition at line 531 of file x509.py.

 Formats supported in this object.
- tuple pem_converter = PEM_converter("CERTIFICATE")

 PEM converter for this object.

10.197.1 Detailed Description

X.509 certificates.

This class is designed to hold all the different representations of $\rm X.509$ certs we're using and convert between them. $\rm X.509$ support in Python a nasty maze of half-cooked stuff (except perhaps for cryptlib, which is just different). Users of this module should not have to care about this implementation nightmare.

Definition at line 326 of file x509.py.

10.197.2 Member Function Documentation

10.197.2.1 def rpki.x509.X509.cross_certify (self, keypair, source_cert, serial, notAfter, now = None, pathLenConstraint = 0)

Issue a certificate with values taking from an existing certificate. This is used to construct some kinds of BPKI certificates.

Definition at line 458 of file x509.py.

10.197.2.2 def rpki.x509.X509.expired (self)

Test whether this certificate has expired.

Definition at line 399 of file x509.py.

10.197.2.3 def rpki.x509.X509.get_DER (self)

Get the DER value of this certificate.

Reimplemented from rpki.x509.DER_object.

Definition at line 340 of file x509.py.

10.197.2.4 def rpki.x509.X509.get_POW (self)

Get the POW value of this certificate.

Definition at line 355 of file x509.py.

10.197.2.5 def rpki.x509.X509.get_POWpkix (self)

Get the POW.pkix value of this certificate.

Definition at line 364 of file x509.py.

10.197.2.6 def rpki.x509.X509.getIssuer (self)

Get the issuer of this certificate.

Definition at line 375 of file x509.py.

10.197.2.7 def rpki.x509.X509.getNotAfter (self)

Get the expiration time of this certificate.

Definition at line 387 of file x509.py.

10.197.2.8 def rpki.x509.X509.getNotBefore (self)

Get the inception time of this certificate.

Definition at line 383 of file x509.py.

$10.197.2.9 \quad def \ rpki.x509.X509.getPublicKey \ (\textit{self})$

Extract the public key from this certificate.

Definition at line 395 of file x509.py.

10.197.2.10 def rpki.x509.X509.getSerial (self)

Get the serial number of this certificate.

Definition at line 391 of file x509.py.

10.197.2.11 def rpki.x509.X509.getSubject (self)

Get the subject of this certificate.

Definition at line 379 of file x509.py.

10.197.2.12 def rpki.x509.X509.issue (self, keypair, subject_key, serial, sia, aia, crldp, notAfter, cn = None, resources = None, is_ca = True)

Issue a certificate.

Definition at line 403 of file x509.py.

10.197.2.13 def rpki.x509.X509.normalize_chain (cls, chain)

Normalize a chain of certificates into a tuple of X509 objects. Given all the glue certificates needed for BPKI cross certification, it's easiest to allow sloppy arguments to the HTTPS and CMS validation methods and provide a single method that normalizes the allowed cases. So this method allows X509, None, lists, and tuples, and returns a tuple of X509 objects.

Definition at line 487 of file x509.py.

10.197.3 Member Data Documentation

10.197.3.1 rpki.x509.X509.DER

DER value of this object.

Public Attributes

• content

Static Public Attributes

- dump_inbound_cms = None
- dump_outbound_cms = None

If set, we write all outbound XML-CMS PDUs to disk, for debugging.

• tuple econtent_oid = POWify_OID("id-ct-xml")

10.198.1 Detailed Description

Class to hold CMS-wrapped XML protocol data.

Definition at line 995 of file x509.py.

10.198.2 Member Function Documentation

10.198.2.1 def rpki.x509.XML_CMS_object.decode (self, xml)

Decode XML and set inner content.

Definition at line 1020 of file x509.py.

10.198.2.2 def rpki.x509.XML_CMS_object.dump_to_disk (self, prefix)

Write DER of current message to disk, for debugging.

Definition at line 1038 of file x509.py.

10.198.2.3 def rpki.x509.XML_CMS_object.encode (self)

Encode inner content for signing.

Definition at line 1016 of file x509.py.

10.198.2.4 def rpki.x509.XML_CMS_object.pretty_print_content (self)

Pretty print XML content of this message.

Definition at line 1024 of file x509.py.

10.198.2.5 def rpki.x509.XML_CMS_object.schema_check (self)

Handle XML RelaxNG schema check.

Definition at line 1028 of file x509.py.

10.198.2.6 def rpki.x509.XML_CMS_object.unwrap (cls, der, ta, pretty_print = False)

Unwrap a CMS-wrapped XML PDU and return Python objects.

Definition at line 1064 of file x509.py.

10.198.2.7 def rpki.x509.XML_CMS_object.wrap (cls, msg, keypair, certs, crls = None, pretty_print = False)

Build a CMS-wrapped XML PDU and return its DER encoding.

Definition at line 1047 of file x509.py.

10.198.3 Member Data Documentation

10.198.3.1 rpki.x509.XML_CMS_object.content

Reimplemented from rpki.x509.CMS_object.

Definition at line 1022 of file x509.py.

10.198.3.2 rpki.x509.XML_CMS_object.dump_inbound_cms = None [static]

Definition at line 1014 of file x509.py.

10.198.3.3 rpki::x509.XML_CMS_object::dump_outbound_cms = None [static]

If set, we write all outbound XML-CMS PDUs to disk, for debugging. If set, we write all inbound XML-CMS PDUs to disk, for debugging.

Value of this variable is prefix portion of filename, tail will be a timestamp.

Definition at line 1007 of file x509.py.

10.198.3.4 tuple rpki.x509.XML_CMS_object.econtent_oid = POWify_OID("id-ct-xml") [static]

Reimplemented from rpki.x509.CMS_object.

Definition at line 1000 of file x509.py.

The documentation for this class was generated from the following file:

• x509.py (2784)

10.199 rpki.xml_utils.base_elt Class Reference

Inherits object.

Inherited by rpki.left_right.list_resources_elt, rpki.left_right.list_roa_requests_elt, rpki.publication.publication_object_elt, rpki.xml_utils.data_elt, and rpki.xml_utils.text_elt.

Public Member Functions

- def <u>__str___</u>
- def endElement
- def make_b64elt
- def make elt
- def make_pdu
- def read_attrs
- def startElement
- def toXML

Static Public Attributes

- tuple attributes = ()

 XML attributes for this element.
- tuple booleans = ()

 Boolean attributes (value "yes" or "no") for this element.
- tuple elements = ()

 XML elements contained by this element.

10.199.1 Detailed Description

Virtual base class for XML message elements. The left-right and publication protocols use this. At least for now, the up-down protocol does not, due to different design assumptions.

Definition at line 126 of file xml_utils.py.

10.199.2 Member Function Documentation

10.199.2.1 def rpki.xml_utils.base_elt.__str__(self)

```
Convert a base_elt object to string format.
```

Reimplemented in rpki.publication.report_error_elt.

Definition at line 201 of file xml_utils.py.

10.199.2.2 def rpki.xml_utils.base_elt.endElement (self, stack, name, text)

```
Default endElement() handler: just pop the stack.
```

Reimplemented in rpki.left_right.child_elt, rpki.publication.client_elt, rpki.publication.publication_object_elt, rpki.xml_utils.text_elt, and rpki.xml_utils.data_elt.

Definition at line 153 of file xml_utils.py.

10.199.2.3 def rpki.xml_utils.base_elt.make_b64elt (self, elt, name, value = None)

Constructor for Base64-encoded subelement.

Definition at line 192 of file xml_utils.py.

10.199.2.4 def rpki.xml_utils.base_elt.make_elt (self)

XML element constructor.

Definition at line 178 of file xml_utils.py.

10.199.2.5 def rpki.xml_utils.base_elt.make_pdu (cls, kargs)

Generic PDU constructor.

Definition at line 208 of file xml_utils.py.

10.199.2.6 def rpki.xml_utils.base_elt.read_attrs (self, attrs)

Template-driven attribute reader.

Definition at line 166 of file xml_utils.py.

10.199.2.7 def rpki.xml_utils.base_elt.startElement (self, stack, name, attrs)

Default startElement() handler: just process attributes.

Reimplemented in rpki.left_right.list_resources_elt, rpki.left_right.list_roa_requests_elt, and rpki.publication.config_elt.

Definition at line 145 of file xml_utils.py.

10.199.2.8 def rpki.xml_utils.base_elt.toXML (self)

Default toXML() element generator.

Reimplemented in rpki.left_right.list_resources_elt, rpki.publication.publication_object_elt, rpki.xml_utils.text_elt, and rpki.xml_utils.data_elt.

Definition at line 160 of file xml_utils.py.

10.199.3 Member Data Documentation

10.199.3.1 rpki::xml_utils.base_elt::attributes = () [static]

XML attributes for this element.

Reimplemented in rpki.left_right.self_elt, rpki.left_right.bsc_elt, rpki.left_right.repository_elt, rpki.left_right.parent_elt, rpki.left_right.child_elt, rpki.left_right.list_resources_elt, rpki.left_right.list_roa_requests_elt, rpki.left_right.list_published_objects_elt, rpki.left_right.report_error_elt, rpki.publication.config_elt, rpki.publication.client_elt, rpki.publication.publication_object_elt, and rpki.publication.report_error_elt.

Definition at line 135 of file xml_utils.py.

10.199.3.2 rpki::xml_utils.base_elt::booleans = () [static]

Boolean attributes (value "yes" or "no") for this element.

Reimplemented in rpki.left_right.self_elt, rpki.left_right.bsc_elt, rpki.left_right.parent_elt, and rpki.left_right.child_elt.

Definition at line 143 of file xml_utils.py.

10.199.3.3 rpki::xml_utils.base_elt::elements = () [static]

XML elements contained by this element.

Reimplemented in rpki.left_right.self_elt, rpki.left_right.bsc_elt, rpki.left_right.repository_elt, rpki.left_right.parent_elt, rpki.left_right.child_elt, rpki.publication.config_elt, and rpki.publication.client_elt.

Definition at line 139 of file xml_utils.py.

The documentation for this class was generated from the following file:

• xml_utils.py (2836)

10.200 rpki.xml_utils.data_elt Class Reference

Inherits rpki::xml_utils::base_elt.

Inherited by rpki.left_right.data_elt, and rpki.publication.control_elt.

Public Member Functions

- def endElement

- def toXML
- def unimplemented_control

10.200.1 Detailed Description

Virtual base class for PDUs that map to SQL objects. These objects all implement the create/set/get/list/destroy action attribute.

Definition at line 243 of file xml_utils.py.

10.200.2 Member Function Documentation

10.200.2.1 def rpki.xml_utils.data_elt.endElement (self, stack, name, text)

Default endElement handler for SQL-based objects. This assumes that sub-elements are Base64-encoded using the sql_template mechanism.

Reimplemented from rpki.xml_utils.base_elt.

Reimplemented in rpki.left_right.child_elt, and rpki.publication.client_elt.

Definition at line 249 of file xml_utils.py.

10.200.2.2 def rpki.xml_utils.data_elt.make_reply (self, $r_pdu = None$)

Construct a reply PDU.

Definition at line 275 of file xml_utils.py.

10.200.2.3 def rpki.xml_utils.data_elt.make_reply_clone_hook (self, r_pdu)

Overridable hook.

Reimplemented in rpki.left_right.data_elt.

Definition at line 292 of file xml_utils.py.

10.200.2.4 def rpki.xml_utils.data_elt.serve_create (self, r_msg, cb, eb)

Handle a create action.

Definition at line 314 of file xml_utils.py.

10.200.2.5 def rpki.xml_utils.data_elt.serve_destroy (self, r_msg, cb, eb)

Handle a destroy action.

Definition at line 384 of file xml_utils.py.

10.200.2.6 def rpki.xml_utils.data_elt.serve_destroy_hook (self, cb, eb)

Overridable hook.

Reimplemented in rpki.left_right.child_elt.

Definition at line 378 of file xml_utils.py.

10.200.2.7 def rpki.xml_utils.data_elt.serve_dispatch (self, r_msg, cb, eb)

Action dispatch handler.

Reimplemented in rpki.publication.control_elt.

Definition at line 395 of file xml_utils.py.

10.200.2.8 def rpki.xml_utils.data_elt.serve_fetch_one (self)

Find the object on which a get, set, or destroy method should operate. $\ \ \,$

Definition at line 296 of file xml_utils.py.

10.200.2.9 def rpki.xml_utils.data_elt.serve_get (self, r_msg, cb, eb)

Handle a get action.

Definition at line 360 of file xml_utils.py.

10.200.2.10 def rpki.xml_utils.data_elt.serve_list (self, r_msg, cb, eb)

Handle a list action for non-self objects.

Definition at line 369 of file xml_utils.py.

10.200.2.11 def rpki.xml_utils.data_elt.serve_post_save_hook ($self, q_pdu$, r_pdu , cb, eb)

Overridable hook.

Reimplemented in rpki.left_right.self_elt, rpki.left_right.parent_elt, rpki.left_right.child_elt, and rpki.publication.client_elt.

Definition at line 310 of file xml_utils.py.

10.200.2.12 def rpki.xml_utils.data_elt.serve_pre_save_hook ($self, q_pdu$, r_pdu , cb, eb)

Overridable hook.

Reimplemented in rpki.left_right.data_elt, and rpki.left_right.bsc_elt.

Definition at line 306 of file xml_utils.py.

10.200.2.13 def rpki.xml_utils.data_elt.serve_set (self, r_msg, cb, eb)

Handle a set action.

Reimplemented in rpki.publication.config_elt.

Definition at line 337 of file xml_utils.py.

10.200.2.14 def rpki.xml_utils.data_elt.toXML (self)

Default element generator for SQL-based objects. This assumes that sub-elements are Base64-encoded DER objects.

Reimplemented from rpki.xml_utils.base_elt.

Definition at line 263 of file xml_utils.py.

10.200.2.15 def rpki.xml_utils.data_elt.unimplemented_control (self, controls)

Uniform handling for unimplemented control operations.

Definition at line 408 of file xml_utils.py.

The documentation for this class was generated from the following file:

• xml_utils.py (2836)

10.201 rpki.xml_utils.msg Class Reference

Inherits list.

Inherited by rpki.left_right.msg, and rpki.publication.msg.

Generic top-level PDU.

Definition at line 416 of file xml_utils.py.

10.201.2 Member Function Documentation

10.201.2.1 def rpki.xml_utils.msg.__str__ (self)

Convert msg object to string.

Definition at line 442 of file xml_utils.py.

10.201.2.2 def rpki.xml_utils.msg.endElement (self, stack, name, text)

Handle top-level PDU.

Definition at line 434 of file xml_utils.py.

10.201.2.3 def rpki.xml_utils.msg.is_query (self)

Is this msg a query?

Definition at line 468 of file xml_utils.py.

10.201.2.4 def rpki.xml_utils.msg.is_reply (self)

Is this msg a reply?

Definition at line 472 of file xml_utils.py.

10.201.2.5 def rpki.xml_utils.msg.query (cls, args)

Create a query PDU.

Definition at line 455 of file xml_utils.py.

10.201.2.6 def rpki.xml_utils.msg.reply (cls, args)

```
Create a reply PDU.
```

Definition at line 462 of file xml_utils.py.

10.201.2.7 def rpki.xml_utils.msg.startElement (self, stack, name, attrs)

```
Handle top-level PDU.
```

Definition at line 421 of file xml_utils.py.

10.201.2.8 def rpki.xml_utils.msg.toXML (self)

```
Generate top-level PDU.
```

Definition at line 446 of file xml_utils.py.

- def endElement
- def endElementNS
- def saxify
- def startElement
- def startElementNS

Public Attributes

- · result
- stack
- text

10.202.1 Detailed Description

SAX handler for RPKI protocols.

This class provides some basic amenities for parsing protocol XML of the kind we use in the RPKI protocols, including whacking all the protocol element text into US-ASCII, simplifying accumulation of text fields, and hiding some of the fun relating to XML namespaces.

General assumption: by the time this parsing code gets invoked, the XML has already passed RelaxNG validation, so we only have to check for errors that the schema can't catch, and we don't have to play as many XML namespace games.

Definition at line 38 of file xml_utils.py.

10.202.2 Member Function Documentation

10.202.2.1 def rpki.xml_utils.sax_handler.__init__ (self)

Initialize SAX handler.

Definition at line 53 of file xml_utils.py.

10.202.2.2 def rpki.xml_utils.sax_handler.characters (self, content)

Accumulate a chuck of element content (text).

Definition at line 69 of file xml_utils.py.

10.202.2.3 def rpki.xml_utils.sax_handler.create_top_level (self, name, attrs)

Handle top-level PDU for this protocol.

Definition at line 119 of file xml_utils.py.

10.202.2.4 def rpki.xml_utils.sax_handler.endElement (self, name)

Handle ${\tt endElement}$ () events. Mostly this means handling any accumulated element text.

Definition at line 101 of file xml_utils.py.

10.202.2.5 def rpki.xml_utils.sax_handler.endElementNS (self, name, qname)

Redirect endElementNS() events to endElement().

Definition at line 65 of file xml_utils.py.

10.202.2.6 def rpki.xml_utils.sax_handler.saxify (cls, elt)

Create a one-off SAX parser, parse an ETree, return the result.

Definition at line 111 of file xml_utils.py.

10.202.2.7 def rpki.xml_utils.sax_handler.startElement (self, name, attrs)

Handle startElement() events.

We maintain a stack of nested elements under construction so that we can feed events directly to the current element rather than having to pass them through all the nesting elements.

If the stack is empty, this event is for the outermost element, so we call a virtual method to create the corresponding object and that's the object we'll be returning as our final result.

Definition at line 73 of file xml_utils.py.

10.202.2.8 def rpki.xml_utils.sax_handler.startElementNS (self, name, qname, attrs)

Redirect startElementNS() events to startElement().

Definition at line 61 of file xml_utils.py.

10.202.3 Member Data Documentation

10.202.3.1 rpki.xml_utils.sax_handler.result

Definition at line 97 of file xml_utils.py.

10.202.3.2 rpki.xml_utils.sax_handler.stack

Definition at line 59 of file xml_utils.py.

10.202.3.3 rpki.xml_utils.sax_handler.text

Definition at line 58 of file xml_utils.py.
